### FIRST REPORT

4 THE

## CURATOR OF ANCIENT MONUMENTS IN INDIA

FOR THE YEAR 1881-82.

#### PREFACE.

IN April 1880, the Supreme Government placed me on the special duty for the purpose of investigating the condition of monumental buildings at Lahor. Della, and Agrical After visiting the options. I submitted a report, dated 10th May, together with a List of the Principal Monuments throughout India ( re-Appendix II, per viv). I have not added to this list periodian of the work of control 11 that have been undertaken and as in process.

- 2. A temporary to bli hunnit of draft non-medianed has managed during the per in one using the hadding to I have said field in this A in the report; and luring July, I in justed and draft it in with.
- a. The meanment of the Linture, in the and the fairing out of the deaving presented during the year. A party of draftsmen were engined. Let count S uchi and M ada, and the work at Labore, Delhi, and Amril a we continued up to April 1881, when the whole party a combled at he dequarters and turned their attention to the engineering of drafts.

T In ha year his-Thsember 1 al

1. On the 2nd November 1880 I left Simb on tour, visiting Lahore, Amritsur, Agra, Gwallor, Allahabad, Sanchi. Mandu, Ujain, Benares, Jampur, returning to Simla, where I drew out reports on the places visited, and awaited the directions of the Government of India. In obedience to orders, I proceeded to Calentia, arriving on the 19th January 1891

Apr - A - I Caral a

5. On the 28th January I was guzetted Curator of Ancient Monuments in Indly; and on the 2nd February following, received instructions to inspect the principal monuments throughout India (see Resolutions in the Home, Revenue and Agricultural Department, Appendices I and K, page (xxiii).

dient, 155 L

- 0. I left Calcutta on the 6th February, and proceeded Mahayellipur, Vellore, Trichimpoly, Srirangam, Madnes. Tanjore, Kombakonum, Chillambaram, Congeveram, and Bijanogar. I then proceeded to Kallurgali in the Nizam's Dominions, and on to Bombay. seeing Bijapor, Poona, Karli, Ambernath, Elephanta, and Alumedabad. Passing up the Rajputama State Railway. I visited Mount Abu, Ajunt, Ulwar, Jaipur, and Delhi. returning to Simla on the 16th April.
  - 7. From May I was engaged in compiling the preliminory report on Madras, Bombay, Rajputana, Kalburgali, and Central India.
  - S. During July I inspected the Delhi walls and gates and the fortress at Civalier, where Major Keith is employed on special duty, in renovating its ancient buildings.
  - During November I visited Lahore, in company with Mr. Heath, Executive Engineer, Archeological Division, Agra, in order to ascertain whether he could unde take to superintend repairs to monuments at Lahore and Delhi, in addition to his work in the North-Western Provinces.
  - 10. The members of my establishment were uninterraptedly employed in fairing out plans and drawings up to

the end of November, when they accompanied me to Umi-Ilia, where during December and January 1852 I was busy with 7 and regime tal studie previous to an examination for promoting to Major, held on the 30th and 31 r of January. This greatly eners whed on my tour season; but the draft-men continued their work, a party proceeding on the 12th December to Madras to survey at Trichimpoly and Madaira.

11. Leaving the remainder of the draft men at Umballa to continue their plans and fairing out. I proceeded to Pr hawar, where I arrived on the 6th February, visiting Ranighat, Shahbazgarhi, the Karamar Hill, Bakshall and Takht-i-Bahi in Eusofzai, and Charsuddah in Hastnagar.

12. After Eusofzai I proceeded to Nur Mahal, near I -i II Phillour, and then to Gwallor, Agra, Buddha Gyu, and rid Calcutta to Madras, Madura, Bombay, Indere, Ajmir, 1 2 and back to Simb on the 7th April. From the 24th April to the 7th June I became occupied with the theoretical subjects obligatory in the examination for promotion to Major.

13. Having briefly sketched out the way in which my time has been employed liner April 1850, I centure to submit same preliminary and general of evations on the abject of conservation of national monuments; the various appendices particularise in detail what has been recommended to the particularise in detail what has been recommended to the particularise various Local Governments. Administrations, and Native Local States, and what are the steps that have been severally taken.

14. It will probably be neither out of place or minteresting to true the various steps that have led up to the present systems for archaeological investigation, and for preserving the structures themselves, or record of their architecture.

15 During the infuncy of British rule, officials, although fully occupied with the actuons tasks of government, found leisure to investige to beal antiquities, and the names of Todd, Wil on, Princep. Buchanan, Kiltoe, in Bengal: of Mackennie, Elliot, in Madras; and of Sykes, Forbes, Wilson, Phandaji, in Bombay, are illustrious examples of such ir dividual labours.

Fils E TOP

16. The accounts of the early Eastern travellers are als so numerous and interesting, that I have ventured to place in the Appendix (see M. page lxxvi to ev) a Catalogue of Works referring to Indian and Oriental Architeture, Art and Archaeology.

ा भी ताम∞ marginal In red .

17. A sentiment of respect for the manuments of the past has not unfrequently been exhibited by the carly Governors General. India is indebted to the T. of Min o the Marquess of Hastings, Lord Ambret, Lord Auckla I. Lord Canning, and other, for the pre-at tate of pre-exet on of our of the most beautiful monuments of Ladian antiquity

TI IVA

18. In 1508, during the administration of the Forl or Minto, a Toj Cammittee vas appointed, and Lacateman Taylor was carried with repairs, which exceeded Re-Lun Out in cost.

F-b-s-

19. In 1815 the Marque of He tings directed regains at La la tit. Fot hpur-Sikri and Skoundri; and in the ollowin; ji ir il e lo I agents at Agra were in true of to negotiate for the surrender of the base of the grounds beloning to the Tamb of Akbar, and to propose a small establishment for keeping the grounds; whilst Lientenant J. Taylor was sent to reside at Sikandra for the purpose of preserving the tomb from ruin.

- 20. In 1816 the pensions of deceased kadims at the Taj r , tag were discontinued, and the fruit grown in the gardens was sold for the benefit of Government.
- 21. In 1826 the Kutub Minar was repaired, by order of K to M = the Government of India, by Major Smith, 2.1. (Governor General Earl Amberst).
- 22. Between the years 1828 and 1835, when Lord William T.j. 1-2. Bentinck was Governor Coneral of India, the Toj was on the point of being demolished for the value of its markle; and it was in 1831 proposed to lease the Sikambra Cardons to the Executive Engineer at Agra for the purposes of a unlative enlitivation.
- 23. In 1840 the local agents at Agra reported that the Te ...
  Taj revenues from villages yielding Rs. 1.200 per month were at the time of the British occupation applied to the general purposes of the State.
- 21. During the Governor Generalship of Lord Auckland, pain 1842, the local agents at Agra were directed to assume the charge of Itmod-ud-Dowlah's Tomb, and keep it in repair.
- 25. In 1848 Viscount Hardinge anthori od the local agents at Agra to dishur a Rs. 150 for the reprire of Itmadud-Dowlah's Tomb; and in 1847 his Government direct 17 and the Collector to bring the village connected with the shrine prof Shaikh Salim Chisti at Fatchpur-Sikri on to the rent-roll of the district.
- 26. About 1848 Captain Gill was employed in making c t faithful transcripts of the wonderful paintings in the Caves A of Ajanta.
- 27. In 1848 Sir Bartie Frem, then Resident at Satara, 13 instituted a survey of the Muhammadan remains at Bijapur, and Captain Hart, of the Bombay Engineers, had charge of the work.

Falem Chis. 1 Tamb. 1460

28. During Lord Dalhousie's time the Lieut nant-Governor of the North-Western Provinces, in 1850, sanctioned the following distribution of the endowments connected with the Tomb of Shaikh Salim Chistl at Fatelipur-Sikri :-

Repairs
---------

Bleiblings at T hari

29. At the instance of Mr. J. Gibbs, then Assistant Commissioner, and Sir Bartle Frere, then Commissioner of Sind, in 1855, Lord Elphinstone, Governor of Bourbay, sanctioned Rs. 5,000 towards the repairs to the Jama Masjid and tombs at Tatta, in Sind (see page axxvii of the Appendix).

J M . jul. 14 bi, 146.

30. Lord Lawrence in 1857 (Governor General Lord Canning) prevented the Jama Masjid, Delhi, from being raz-d to the ground.

P. L. Cusmingham's

31. Major-General (then Colonel) Cunningham was var y, 1902, appointed Archaeological Surveyor in 1802-a post he held up to 1865.

Director pairs I 3.

32 In 1863, Sir Bartle Frere, when Governor of Bombay, sanctioned an annual grant of Rs. 2,450 for the repairs of the Bijapur remains.

#### CHAPTER II.

STREET INTERIORS OF ENGINEERS OF LOCAL COMPLETE THE SECOND THE CONTINUE OF MOST AND AND THE CHICKEN THEIR CONTENTATION BETWEEN IN TEAMS 1.05 AND 1991

- 33. In 1800 and 1807, the late Sir Henry Cole, then Secre-Sir II my tary of the Science and Art Department and Director of the South Kensington Museum, London, instituted enquiries as to the means of systematically collecting illustration of Indian architecture (in lieu of originals) by means of photography, plans and easts (see Appendices A and B, page i); and a fecture on the study of Indian architecture was read by Mr. J. Fergusson at the Society of Arts, London, on Mr. I the 19th December 1866, Sir James Fergus on 1 ing in the issue chair (see page laxxi of the Appendix, M).
- large collection of photographs created great interest for Indian architecture, and during this Exhibition a Conventium was entired into by the several Primes of the remaing families of Europe, whereby they agreed materally to make the massing of Europe in promiting casts and copies of matimal objects for the promotion of art (see Appendix C, page iii).
- 35. The first movement for the systematic preservation regular and illustration of monuments in Bombay we directed by he the Government of India in August 1867; repairs of buildings at Ahmedabad were taken in head—a sum of Rs. 5.300 being a perioned for the Tomb of Shah Ahm, and Rs. 5.000 for repairing the buildings at Sickhej.
- comment of India to conserve and record the most remark-1 able monuments in the country, and enclosed in his despatch is a letter from the Director of the South Kensington Museum asking for greater details regarding the date, construction, ornamentation, and condition of ancient buildings. Survey

parties were accordingly sanctioned for Madras, Bombay, Bengal, and the North-Western Provinces, and the following steps were taken :-

Ma in 1- 0

37 In Madras, bord Napier initiated the restoration of Trimal Nayakka's Palace, and its utilisation for public offices. Mr. Chi holm prepared estimates and plans.

Parelier.

38. In Bombay, a party from the School of Art (under Mr. Terry) made custs at the Temple of Ambarnath.

Pop al. 1 -.

39. In Bengal, the Calcutts School of Art (Principal Mr. Locke) prepared casts of temples in Cuttack.

N. W. P. 15 -

10. In the North-Western Provinces an archaeological survey was instituted (see Appendices D, II and P, pages v to xii).

hi Tep. 1004

41. The Government of Sir Julin Lawrence prevented the demolition of the Sanchi Tope Cateways in 1868.

All results with the 1. 9.

12. In 1869, Rs. 3,000 was sanctioned by the Bombay Government for the repair of the Palace and Tank at Sirkle j. Ahmedal id.

with cast.

12. In 1870, in Lord Mayo's time, call were made of the Eastern Dateway of the Smehi Tope and other emptures (see Appendix F, page xiii).

Kul had Falling to STATE OF 1571

41. In 1871, casts were made at the Kutub, Delhi, and at Fatchpur-Sikri, Agra.

#### CHAPTER III.

GENERAL OPPERATIONS ON THE CONSERVATION OF BISTORICAL ROST HETTS.

- 62. It may be said that investigation has from the implications times received on all sides great attention and are a encouragement. So much, however, remains to be done, particularly in the direction of accuracy, and the interest so increases with the increasing knowledge, that preservation of historical landmarks acquires an importance most difficult to ignore.
- have not always had the greatest respect for the maintenance of manuments. Archeological research has for it object the chicidation of history, and to an enthu instath elemptation to carry off a proof of an unravelled mystery is undoubtedly great. If there were no such things as photographs, cast, and other means of reproducing archeological evidence, the removal of original stone records might perhaps be justified.
- of. Sometimes, indeed, the removal of ancient remains is a necessary for safe custody; and in the case of a foreign recountry we are not responsible for the preservation in oits of important buildings. We are not answerable for keeping Greecian marbles in Greece; neither were we concerned for the rights of Egypt when Cleopatra's Needle left Alexandria for the Thames embankment.
- British possession—the arguments are different. We are, I have a submit, responsible for Indian monuments, and that they are preserved in vitu, when possible. Moreover, as Mr. Fergusson remarks. Indian scripture is so essentially a part of the architecture with which it is bound, that it is impossible to appreciate it properly without is include to realize correctly the position for which it was originally the least (see Appendix B, page iii).

Appendices A, B and C, pages i to v). Casts are made so exactly like the sculpture, that no argument against them is of force. I hope before long the Supreme Government will announce all over India the acceptance of the "in site, if possible, principle." Each case should be judged on merits; but I submit that no demolition of importance should be allowed without the express concurrence of the Governor General in Council.

Semelance 67. The removal, for instance, of Stonehenge to London would, I imagine, provoke considerable excitement in England, and be condemned by a unjority in the scientific and artistic world.

Couls, sa

63. Outside the professional and technical remedies necessary to restore and repair national monuments, there are the important but simple measures of custody and the removal of over-busy natural vegetation. These remedies should, I submit, be strongly recommended, by Local Governments and Administrations to all district officials, who might, with great advantage, be invited to submit their proposals for providing enstedings, wherever they consider thom advisable.

Lal interest

69. The encouragement of local interest in monuments is the more essential to secure the fabrics from damage, as without widespread organisations no measures for repairs or restorations can combat with the peculiar tropical conditions tending to damage every kind of building and structure in India.

Pullistim agu war ba

70. In November 1881, 1 addressed the Supreme Government on the subject of the reproduction of architectural Illustrations, and asked for a sum of R . 5,000 in order to get a selection of the drawings under preparation repeated by the best processes for publication (see page laxiv of the Appendix). Government in reply stated that no large or expensive work was contemplated, but smettoned a sum of Rs. 5,000 for the reproduction of some of the most finished drawings propared in my survey for the preservation of any monuments of great importance, adding that the measure should be considered simply as an experiment.

71. The results of these experimental reproductions are [[sperimental] dames submitted with this report, and will be referred to in the detailed reports on the huildings in the various administrative areas. The memoranda drawn up by me at various times (see Appendices G and L, pages xvii and laxiv) how the value I attach to such means for promulgating a knowledge of Indian art, and I can only hope that Government will deal liberally with the subject. Apart, however, from the value of illustrative matter in connection with the development of art, the publication of accurate plans and drawings of a neglected monument of interest and beauty is an important lever for securing a better state of things.

72. A sum of Rs. 50,000 was held in reserve by the Pub- Indext lie Works Department in 1881-82 for grants-in-and founds repairs, &c.; and in the civil estimates for Iss2-53 there is n provision of Rs. 1,00,000 for the same purpose. It was further arranged that the former sum should be available for reappropriation. This is the more necessary, as harry in spending an annual grant before the 31st March would extrainly have a lead effect on the quality of work, which in an artistic building should be first rate. I hope, therefore, that similar arrangements will be made for all grants. In connection with the principle of applying these Imperial Problem grants, there is a point which I strongly commend to imperal the notice of Government. This aid should, I arge, be given when necessary to the most important monuments of their class. There are certain well-known structures and remains of imperial interest and importance, the conservation of which should be encouraged or provided for at the outset.

73. If Local Governments and Native Rulers find it 1 (20) impossible to furnish the whole of the necessary funds, the sum required to make good the total necessary expenditure should, as far as possible, be forthcoming out of the Imperial Treasury.

74. The acceptance of this view would permit of a Point of definite allotment to buildings admitted by the highest of he point authorities to be of importance (see my report of both May, went

Appendix H. ii, page xxxiv), and I have no hesitation in recommending that the necessary funds be allotted on such a principle to the most important of the following not already provided for:—

75. RUDDHIST MONUMENTS.

Paddhier Eronumus Sanchi Tope—Central India, Bhopal State. Date of tope, 500 B.C.; of railing, 250 B.C.; of gates, 10-40 A.D. I made casts here in 1869, and had the place surveyed in 1880. Repairs have commenced under Sir Lepel Griffia, Agent to the Governor General in Central India. A great deal is required to be done.

Buddha Gya—Bengal, Gya District. Date of rail, 250 B.C.; of temple, 500 A.D. I have been here. The temple and rail have been restored by the Bengal Government at great cost, but well done. Executive Engineer—Mr. Beglar.

Bharhut Tope—Central India, Rewa State. Date of rail, 200 B.C. Part of the rail and one gate were removed to the Calcutta Museum by General Cunningham. I have not been to Bharhut yet.

Gandhara Topes and Monasteries—Punjab. Peshawar District. Sculptures date between 50 B.C. and 150 A.D. A great number of them have been excavated from the rained buildings, and taken to Calcutta and Lahard. I have visited some of the most important localities. Repairs are not possible. The only remedy is to remove semblures out of reach of the fanatical Pathan.

Manikyala Tope—Punjab, Rawalpindi. Date of the tope, first century A.D. It was repaired in 720 A.D. I saw this monument in 1568, but do not know its present condition.

Amravati Tope—Madras, Kistna District. Date of the railing, about 300-400 A.D. A large number of the railing marbles have been removed. I am about to inspect those that remain.

Sarnath Tope—Bengal, Benares District. Date of tope, about sixth century A.D. I have visited this. Repairs are under the consideration of the North-Western Provinces Government.

Bhaja Chaitya Cave-Western Ghals, Bombay.

Bedsa Chaitya Cave-Western Ghuts, Bombay.

Nassick Chaitya Cave—Date 129 B.C., Westurn Ghats, Bombay.

Ajanta Chaitya Cave—Date about 100 B.C., Nizam's Territory.

Karli Chaitya Cave—Date 78 B.C., Western Ghat, Bombay. I have been to Karli. Some repairs have been sanctioned by the Bombay Government.

Ajanta Vihara Caves—Date 1-300 AD., Nizam's Dominions. I have not been to Ajanta, but the Nizam's Government has fitted the caves with doors in order to keep out bees and animals and so preserve the old frescoes.

Ellora Vihara Cave and Kailas—Nizam's Dominions. I have not been to Ellora yet.

76. July Monuments.

Dilwarra Temples—1032 to 1247 A.D., Rajputana, J. n. Mount Ahu. I have seen these. Repairs are very much required to preserve the beautiful murble sculptures.

Temples at Parisnath-1439 A.D., Bengal, Bhau-gulpore Division. I have not been here yet.

Temples in Fortress Gwalior—Central India. I have been here—Repairs have been executed by Major Keith, on special duty under the Agent to the Governor General, Central India.

Temples at Khajuraho—Central India. I have not been here yet.

Towers of Victory and Temples at Chittor—806 and 1430 A.D., Rajputana, Meywar State. I have seen Chittor, and have just examined the buildings for repairs (August 1882).

#### 77. HINDU OR BRAHMINICAL MONUMENTS.

Temple at Pandrethan—913 A.D., Kashmir. I surveyed this in 1868. It is sadly in used of repair.

Temples at Avantipur—\$75 to 904 A.D., Kashmir. I surveyed these. They should be looked after.

Temple at Marttand-Kashmir. I have surveyed this. It requires looking after.

Temples at Wangat-Kashmir. These require looking after badly. A survey was made in 1868.

Seven Pagodas-Madras, Chingleput. I have seen these; they require more remedies. Some have been already executed by the Madras Government.

Temple in the Vellore Fort—Madras, North Arent District. Has been well restored by Captain McNeil Campbell, R.E. I have seen this.

Temples at Srirangam—Madras, Trichinopoly District. Are endowed and used. I have seen them, and surveyed the buildings. They require considerable remedies.

Temple at Madura—Madras, Madura District. Is endowed and used. I have surveyed this, to show needful repairs.

Temple at Ramissiram—Madras, Madura District.
This has been surveyed for repairs.

Temple at Tanjore—Madras, Tanjore District. I have seen this. It is kept in fair order by the Princess.

Temple at Kombakonum—Madras, Taujore District. I have seen this; it requires attention. It is emlowed and used.

Temples at Chillambaram—Madras, South Arcot. Are endowed and used. I have been here. The buildings require attention.

Temples at Congeveram—Madras, Chingleput District. I have been here. The temples are endowed and used; they require attention.

Temples and Buildings at Bijanagar (Hampi)—Madras, Bellary District, 1540 A.D. These are deserted, and call for considerable attention. I have inspected the buildings, &c. The Governor of Madras, the Right Honourable Mr. Grant Duff, is about to visit them.

Temples at Nagda near Udaipur—Meywar, Rajputana. Very fine specimens of Jaina styles. I have just seen these.

Temples at Hallabid-Mysore State, 1145 A.D. Partly repaired by Colonel Sankey, R.E., in 1877. I have not been here yet.

Temple at Somnathpur-Mysore State, 1043 A.D.

Partly repaired. I have not been here.

Temple at Baillur-Mysore State, 1114 A.D. I have not been here.

Black Pagoda, Kanarak-Bengal, Or : date ninth century. Measure meded. I have not been here yet.

Teli-ka-Mandir (Temple), Fortress Gwalior—Central India; date tenth century. I have been here. The building is in course of complete repair under Major Kai h and the Military Works Branch, Public Works Department.

Benares Temples and Ghats—I have been here; the buildings now remaining are medieval in date; the temples are in use and looked after by the Natives, but many require attention in respect of elemniness and repair. Some of the glats have fallen into rain through lad foundations on the river bank.

Temple at Bindrabun—North-Western Province, Muttra District. Repairs commenced by Mr. Grow and still in progress under the Executive Engineer, Archaelogical Division, North-Western Provinces, Mr. Heath, but lately the priests whitewashed the interior. I saw the building before repairs in 1868.

Amritsar Temple (Sikh). I have seen this. It is repaired very well by the Sikhs. A complete survey has been made at the request of Sir Robert Egerton, the late

Lieutenant-Governor of the Panjah.

#### 75.

1115 bl P 12 5.

M. dura—Medras. Very fine but the I being pair I a concess and r Mr. Chisholm, Consulting Architect to the M. In.s. Government. I have somether.

Tanjore-Madras. Used by the Princess of Tanjore.

Gweller Fortress—Central India. Fine hulldings, in the ordering repaired under Major R ith, on point duty under the Accust to the Governor General in Central India. I have in pected this often. Plan are making in my office.

Udaipur-Meywar, Rajputam. Und by the Mah rana. I have just in a cited this.

Ulwar-flejput us. Used by the Mel. rao-rajah. I have so this. Nothing done so yet.

Amber—Rajput in Jaipur. Requires repairs. I have seen this. I recent to record that the Pelace has whitewashed to receive the Viceroy in 1881. No repairs have been done in yet.

Dig-Rejput un, Bhartpur. In good order. I surveyed this in 1868.

### 79. AT HAMMADAK MONTH NT:

M sub Kutub Buildings—Punjab, Delhi District. Require some attention. I made on to here in 1970. Surveys of some of the buildings have been made. Much required to be done.

Mosque at Ajmir—Rejputana Has been partly open it. Slight repairs still wanted. I have often inspected this hullding.

Mosques at Jaunpur—North-Western Provinces, Jaunpur District. I have been here. Replies are sauctioned under Mr. Heath, Archaeological Division, North-Western Provinces.

Ahmedabad Buildings—Bombay, Alund had. I have even the c. Repairs were commenced in 1807 under the Collector, Mr. Borrodaile. They require and thoroughly decree sy tematic repair.

Mandu Buildings—Central India, Ither State. I have in period the and had a arrey mad. They require a tematic repairs, or which the Malampa has already initiated one.

Gaur Buildings—Rong I, Malla District. I have not been here yet. The jurchs was once time any cleared by Government. A good deal a required to be done.

Kalburgah Buildings-Nizam' Dominions. I have impacted these. The Ni m's Government la unctioned pairs.

Bijapur Buildings—Banday, Kaladel Di tri t. I have inspected the c. Repairs were initiated by S. Barde Frame the i Governor of Benday in 1-83. The citaled buildings are now bong converted into offere or the differ by Mr. Reinald, Executive Engineer, Kaladei. Much commiss to be done to the architectural monuments.

Mosques and Tombs at Tatta—Ramby, Sint. I have not yet sen these. They were repaired in 1855 unter the uspice of Mr. (libbs.

Shir Shah's Tomb at Sasseram—Bengul, Shahabad District. Repairs commenced by the Bengal Government Lecentive Legineer—Mr. Beclar.

Akhar's Tomb, Sikandra—North-We tern Province, Agra District. I have oft a seen this. It has been remoted by Mr. Heath, Executive Engineer, Archicological Division, North-Western Provinces, and the wall and gates are nearly complete. Mr. Luwrence, Collector of Agra, has record the ground.

The Taj, Agra-North-Western Province, Agra Division, I have often on this. It has been perfectly respond by Mr. Heath, Executive linginger, Archeological Division, North-Western Province. The gardens are in first-rate order under the Collector of Agra, Mr. Lawrence.

Jahangir's Tomb, Lahore—Punjab. I have surveyed this. Repairs that were argently wanted have been commenced by the Punjah Government.

80. MUHAMMADAN PALACES.

hammaden pulsors. Agra—North-Western Provinces. I submitted a report to Sir William Muir in 1868. The buildings of interest have been completely repaired by Mr. Heath, Executive Engineer, Archaeological Division, North-Western Provinces.

Delhi-Punjah. A great deal has to be done. I have surveyed some of the buildings. Repairs have communeed.

Lahore—Punjab. A great deal has to be done. I have had some of the buildings surveyed.

Jahangir's Palaces in the Daolat Bagh at Ajmir—Rajputana. I am having a survey made of the buildings to show needful repairs.

Akbar's Palace at Fatehpur-Sikri-North-Western Provinces. I surveyed this in 1869, and made casts in 1871. Repairs have since 1875 been carried out under Mr. Heath. Executive Engineer, Archaeological Division, North-Western Provinces, and are nearly completed.

- 81. As already stated in my report (Appendix II. page xx. paragraph 2), architectural monuments have suffered, and are suffering, more from the acts for which Government has been responsible than from the natural decay and ruin produced by rain or vegetation in the jungle and deserted places. The remedies, which are to be applied it Lahore and Delhi, will make good damage done for the most part in the early days of British rule.
- 82. A list of interesting British monuments worthy of preservation is given in the Appendix N, page evi; also a list of some ancient and modern forts and citadels in India in Appendix Y, page eexvi.

H. H. COLE, Captain, R.E., Curator of Ancient Monuments in India.

#### APPENDIX.

#### A

Extract from a Memorandum offering suggestions for collecting information about the ancient architecture of India, by Lieutenant H. H. Cole, R.E., dated Naini Tal, June 1867.

A collection of records of links archiveture could only be represent 1 in England, by photographs, drawings, plans, cut and written descriptions.

In order to render the collection party in tructive, details of buildings handle be accurately represented.

2. Apart from the value of representing Indian architecture for all ly in England, there would be a good opportunity for representing, at various museum in India, a History of Native Architeture, to discuss of indives, who is observed its daily becoming more and more arrupt to a daily on anality and plant 3 being lost, is a matter worthy of serious consideration.

#### B

Memorandum by James Fergueson, Esq. (1888), regarding objects in India of which it is desirable easts should be obtained.

There are in the Museum of the Royal Andle Sorty at Clearts and the Court Museum at Madma a considerable number of sculp are, some of the boarty and interest, of which it would be described easist about the open who to when he are suitable, but it strikes me as extremely described that the purion who are to be employed in a ting the larger of the should first her employed on these smaller antiquities in the hell nusceums.

In the Inhers Museum there is a considerable callection of sculptures obtained from Tops to Afghana tan, principally from the neighborhood of Poshawar, of the Bactro-Indian period, which are of octron-bounty and interest. I should be to see the originals sent to the country. The next but thing, of course, would be east of them.

Lam not aware what autiquit may be of the din any mu num no li mi v.

Int I forcy the manual to consultable me a col which as I may

ve the leing so multiplied.

Bangal—The object in this Presidency of he had not not at I'ds in much to obtain out, are im of the adjustice in the at I'ds in in On , not far from Cuteach.

<sup>&</sup>quot;If any at the configuration in the Calcula Macketail am stall there, each of these would be more described to complete the collection leave.

The two best are the has reliefs in the Jodev and Gancal Gardia Caves. These are figured in the Journal of the Asiatic Society of Bengal, vol. vii, pls. xiii and xliv. They are about 3 feet in height and the one 20, the other, I guess, 30 f in length. They are placed under cover in versulals at suit 7 feet from the ground, and therefore very accessible and, being in low relief, easily east.

There are other sculptures in other caves in this locality which may be worthy of being cast.

These two were the only caves as Ilde when I was there, and they are muong the oldest and most interesting of jours in India. They probably data before the Christian era.

The black Pagesla at Kameron is not for from the e-caves, and is one of the best a 1 m. t elaborately subjected manageness in India. If a party were in that eight authoral and had time they might that autocome object in that now rate of temph worthy of being cost 1t is impossible without photographs or drawings to specify which; but any per on in charge of the party ought to have the least knowledge of the subject to his on the host.

No Ratespire there is a temple some if the sculptures of which are figured J. A. S. B. vir, plexxxil., which from their style are well worthy of being on t; and if a terminous be obtained to the preferred the old Great Temple at Blue as swar, there must be numerous object within it walls worthy of being on to

So far as we now know, it is the olde! Hind's temple in India, and consequently any information a garding it must be most valuable.

This part of Orises i full of authomation interest, and a party could easily the lang um and of employment. So far as I can judge, their relative interest is in the order in which I have unused them.

Next in interest to the . Cutrack sculptures are the pullar and remains of the rail that once surrounded the Bo Tree at B. th Gya in Behar. Some of the are built into the courtyard of the Mahant' h. t. Other form a ort of parch to the pre. In temple, and some are, I believe, is eits. The whole are sculptured are gual in learnty and interest to anything in Brown!

The pillars are not large fr m if to 5 loot in height and each only be whole.

There are also unmerous fragments of ancient scalpture in the neighbourhed to Boodh Gya which are worthy of being cost, but it would be price discrimination by which. The rail is of surpassing interest. It would enfice for the present to 1h to rail the other.

Agra and Delhi.—I am not aware of any objects of Huntz untiquity near these cities which it would be worth while to each under the fragment of the Raddlest rul fiscovered by Concent Countingham at Mutter have been a theoret in the lead interest. (Agra?). If east worm taken of them, they would be of great interest.

Among the Mahomodan remains there is little, if anything, after the doth of Akl r (A.D. 1002), which is worthy of attention in the resp. After that period inlaving became the principal mone of armoneuture, and that cannot be expressed by early. At the Kootule at Dolhi, however, and in the old Pathan bonds a relicionary part of the world, and the carried geometric criminomatic of Aklar bonds in any part of the world, and the carried geometric criminomatic of Aklar bonds in the hoth at Agra and Patchpur Sikri, are no expressed of their class The survey, both at Agra and Patchpur Sikri, are no expressed of their class of the survey; and all, however, only parts of large architectural dolong, and unless of the new extensions as all would fail to reproduce the original effect. If, however, as ting is undertaken in the North-West, a few small panels and defails might as ily be selected for experiment at land.

Sanchi.—There is no monument in the Central Province of which is not so de imble to obtain cast as of the a toway at Sanchi. Two of the are falle, and the fragments on the ground are not only offered by but could atthoughfully be pieced together as a to make a complete rate rate in offer are it one only were undertaken, probably the santhern would be the life figure will creek were no objection, the start is probably of greater interval.

There is also the gatewar of the small r Tope a few and to the north of the great one, which is on a much smaller scale. Only one tribth noof this is mading, the rest in the ground. If the erect point in it is part was no objection, its all scale would make this more desirable as an experiment. The sculpture equal interest to those of the others.

Bombay.—Some of the semipture in the great case of Elephanta or to it of their class, and of great interact to the study of Indian and pairs. The its of these to be first operated upon would in a great dicres depend on their article processation, and that can only be settled on the spot.

The double Elephant Capitals in the giret we at Karli are object to beauty and interest. One or two of the is t of the moughly the contradiction of the cave at Red. (J. B. B. R. A. S., Vol. 1., p. 1.9)

These places are in the immediate a ighle who he head with a like the property and with smaller decide which we do not at the least of the property of the pro

Madras.—Lam very much at a least we what to am I with me I to this Providency. So far as I knew, no sof the substance of the great to all of shigh a character as to be worthy of study, apare from the building in he it is found, though very effective while or or a

If a party could be detached to itellors and H llab der volum of the graphs of Dharana and Mysors), they might find abundance of point he of the nort; but this would probably be too much to at my me. Baren the, denoted temple in the fort at Vellors on with a null affinds in of the and most classicate pillars of the other extra style, and the would be extra a linter ting in any collection as a mean of comparison.

In conclusion. I leggle verter betwee that unlose cast of anitum is not supposed by plane and or arrelative part of the architecture with which it is for a lattice in supposed to appreciate it properly without hong able to concertly the position for which it is concertly the position of the concertly the concertly

I may also add that a part of tall 1 | patched on this expedition and accompanied by a plat grapher. For two gration will provide by a treatment than a constraint they cannot supply it plat, the larger field they cover and thought of incoherant details they include a not the interalments adjusted, and the also bring home to us an infinity of information recarding the antiquities which no amount of casting is likely to afford, in our days at least.

## Convention for promoting universally Reproductions of Works of Art for the benefit of Museums of all Countries.

Throughout the world every analy personal tracket of an annument of Ats of " own which can a fir her prod - by a street effecting a photographs, and ctus pour . . . without the lighte I dameget to the original.

- b) The knowledge of a horanteent to me stary to the progress of Art, and the reproductive of them would be of a high value to all museums for public
- (6) The commencement of a system of regreshming works of Art has been much by the South Ken ington Mu nm, and ille to them of it are now exhibited in the British Section of the Paris Exhibition, where may be on specimens of P. h, Italian, Spinish, Portugus , Cerman, Swi , Ru lan, Hindu, Coltic, and English Art.
  - (c) The following outline of operations is sugressed :-
- i. Paoli country to firm it ewn Commit it needing to liv own views for obtaining such reproductions - it may desire for its own mor unis.
- ii. The Commissions of such country to correspond with one unother and a mi s formation of what reproductions each case to be made, a that overy country, if disposed, may take advantage of the labours of other countries at a moderate cost.
  - iii. Each country to arrange for making exchanges of objects which it desires.
- iv. In order to promote the formation of the proposed Commissions in each country, and facilitate the making of the reproductions, the under igned members of the reigning families throughout Farence, in ting at the Paris Exhibition of 1507, have eignified their approval of the plan and their il ire to promote the

## Report on the Fort Buildings at Agra, by Lieutenaut H. H. Cole, R.E., dated Cawnpore, 4th August 1868.

In accordance with the instructions conveyed in Research in No. 155 of the stated 15th June, by His He is at the Lieutenant-General Properties the buildings in the First Agra, and have the full was report to make:

II port

1. The halldings who is allenkt be

The Jahan or Malial.

" Diwin-i-am.

Malui.
Www.i-Khas

The Sam in Unj

. . in film it i it the Di and Am

11 Mali Ma jil.

And the Capela and Chittore Gate in the Machi Blown should be reter a land built up clowdere in the Fort.

2. The Jahangir Mahal was built by Ahlar, and con at all one paviling, and taken 1456-1508. ingularly elegant in design It is of red and in relif on the one. The interior details are all Hindu, and characterized by that perduar aver into an arch which Akbar alone of all the Mosion moments.

seems to have adopted. Julying's show this Jahanger, 1605-1828. building as the readmond lux two Hinda wives. the prince of Andre (aucient name for Japur) and Marwar. And this sviden of knully feeling to the Hindus lends additional interest to the building, and affords sufficient reas a for its maintenance as a historical as well as an architecturn! monument. At present it is little better than a ruin, which chimate and neglet combine to make were. The whiter she which is liberally baid on in the to the mit should be removed, and the whole of the existing stone-work rendered -ure by iron reamps run with lead. I think that any attempt to restore the handling would prove at once difficult and expensive, and that the work of maintenning should be limited to preserving the present sanding parts, and no attempt and to replace the fallen stem-work which now lies heaped in the centre of the . 1.1. At pre- at the rain that easy access through upper wind we un to the A cof the merth gallery, and, percelating through the atone flour, havel to great the columnst neilings and produced great thear. Water mozes through the flatroof all round the central court; grass and weeds crop up conveniere; and the per of a maghlemring sergeants' que reers finds the paragraph of the roof overhacking the Interior court a convenient asylum for all kinds of refuse.

- 3. Close to and on a level with the cook of the Jahangir Mahal is a very not resting Hinda pavil in in face repair. The whitewar h should be removed, and the road strength and with tramps and cement.
- 1. Close to this are some tanks, which were used to fill the lath I lenging shah Jahan. 1825-1626 to Shah Jahan's galace and harrin, and to upply the pulsee fountains. There are several paper outply are carred in relief on circular distributions. The entains to the lather formains to kept in reput, and i intered a compile to the public.
- 5. The Diwan-i-Am (or audience chamber) we built by Shah Jahan, and is nowed as an armomy. To object it to the requirements of the latter, wind we a European pattern have been built in on the west front, and the whole of the interior whitewashed; so that little remains if its former plenchur. It is, however, in good requir.
- of. I now a we come to the murble buildings—minely, the Klin Mahal, the Saman Burj (or harem), and the Diwnn-i-Klin (or private hall of antience—with, tegether with the Diwnn-i-Am, formed Shah Jah u's pales, and were builded that Emperor in white murble, included the precise stones. In front of the Kline architectural beauty as for the extreme decay into which they have follow. The with its terms—and foundam, are in a fair state of repair, and require only to be the third inspected and the commencement of run stayed. The bath on the west adjoining hardings round the garden, may which it is dispersed to stand
- 7. Some steps in front of the Khas Mahal lead by underground passing in the direction of the well on the sant of the Jahangir Mahal. These passages are blocked up now, but were no doubt used by the ladies of the lazem to get to the well, which is very remarkable for the suites of apartments existing round the lattern and on a level with the water. The well and passages should be maintained.

- The Saman Burj (or private at renemt of the larem) over to ! river. The hole made by one of Lend Lake's cannon-ball in 1802 to yearlill be even in the marble serven on the west. The beautiful polished nurble pillars and elegant arabenques of flowers, inland with procious atoms, buy offered much through the combined influence of time and the British addier, the task large extracted a great number of the stones, and therefore damaged the mail la A. far an the safety of this building is concerned. I recommend that the palls to strongthened with from cramps and land, and fallen press f marble reacted. I believe that Sir E. Loods, the Executive Lingue real one time a more ad 1 that the holes used by the inlackly your extraction of atoms of aid is filled up with e ment, to coulde fresh damage to be discovered. I think, however, that the building withit lose a great deal of its int cost if this plan we could pred. It would not be so easy to form an idea as to what the inhall work had be u; and more over, the very fact of thaft having taken place is evaluate of the exit in all the sufficiently valuable to test. These remark upply equally to the Diwin .- A conwhich has all bee much damaged.
- 9. With a teremen to all the murl le-inlane work, I would not ment by erally that decay he stopp I us far a penilde, but that the buildite. It old - It as much as practicable in their present that the a complet work of retion be entired buto, it would be better to let the pull the bulliance they are, and to heave the oftening influer of tim to course a full improve n per for a hyegune age. The phil cork in the Dannes-Khall ver ft. and the building it If I in the but tyle of Shah Jahan's reign. The building is ally accessable by a ladder from the Saman Burf a dwhen the twild done but ling of the Marki Bhawan have been come red of fallen in, they will be no or compression, as more, with the Divursis Am. Some mane of operation in the ho provided for the public, and I think the less would be a stair see from the cont of the Muchi Ilhawan. Overhoking the river on the terrace of the Diwan-i-A ... is a large black marble stone, broken at our corner. These creamen by called 'Aklar's Stone,' and the cai of inscription round the edge prove that a week r Salom, the a m of Akhar, afterwards the Empone Jal were; a de mer to the cut inscription bears the tume of Jakangu, and the numerial value of the letter terify to 1805 as the date. The stone should be membed with from band in t hars just into its length, as before. The west gateway of the Machi III win contain some hand one brown guts which was I night by Albar for the Part at Chatters. These heald I cannored to it Dinan-i. Am.
- 10. The marbin cupols on the cost of the Machi Bhawan has been party taken down, as a measure of eafety. It was a work of Shah Jahan's time and in design is a mixture of Italian and Mulammanlan etyles. This empile should be removed to some convenient position in the Fort, a an evidence of the doubt of Italian art on the art of Shah Jahan's time. Some dense that the 'Iaj M had was designed by an Italian, but I think that the themselve of this empole gofar to prove that Shah Jahan employed Italian in the doc ration of his building. On the west of the Diwan-i-Am is a small white markly in piec, built on the relations building. Formerly it was in a minimization with the Sai Burj by a created passage, which passed along the back of the Diwan-i-Am and over the west buildings of the Angon Hagh. This measure is in very factour entration, and should be maint inest.
- 11. The last building worthy of preservation is Shah John 's Mei Mej I, on of the most elegant measures of his time. It is not all soft pure what is all promotes in the celling of the mean of the men are fallen flown; of the mean that hadden for most of the mean that the line will be to consider the roof above perfectly water-light. The Moli Manjor cost Ra. 3,00,000, took even years to build, and was exampled in 1662.

Extracts from a letter from Lieutenaut H. H. Cole, R.E., Superintendent, Archmological Survey, North-Western Provinces, India, to the Under Secretary of State for India, dated London, 24th November 1869.

In no ordance with the instructions centained in your letter dated 20th August, I I we the hone or to admit a revised estimate for the work of eating one of the S mili Tope gateways, for the information of His Excellency the Governor General of India in Council. These gateways are of great size and of great interest, as their claborate scalpture, illustrate the history of a period which hum few written records.

- 2. The rvices of one Corporal and two Sappers of the Royal Engineers have been placed at my disposal. These menture now learning how to take casts because of Elastic Moulds, Piece Moulds, Clay Squeezes, Paper Moulds, and have been at to cast some pieces of Jain sculpture which embedy all the usual difficulties to be met with in Indian carvings. I have also been myself mastering all the necessary practical details of these operations.
- 3. I have in this way been able to tell the relative ments of the various is an applied to the Buddler's sculpture at Sa chi, and am satisfied that the method of making clastic mouble with gelatine is the one which will produce the most satisfactory results, in respect of perfection of copy, as well as economy.
- 4. Piece moulding\* is too laboriou and expensive for so large a work; tw washe sold seasons would not suffice to finish one set of moulds of the get way.

Modeling with paper is not only laborrow, but does not produce cheer or warp repetition.

On the other hand, the gelatine method in area a most perfect far-imile and can be executed quickly—two qualifications which in the present in tame are of paramount importance; the thy, because it is usery that copies as perfect to the should be produced for france. From in, Low Ion, Dublin, and Edinburgh (see extent from a creek independent), and secondly, on necount of the extent of the work to be accomplished in a limited time during the cold—in.

### F

Report by Lieutenaut H. H. Cole, Superintendent, Archwological Survey, North-Western Provinces, for the year 1869-70, dated Camp Sanchi, February 1870.

In order to present a connected statement for the year 1-69.70, it is not for most give an entire of operation into my first connection with the Archaeological Survey.

2. On September 1st, 180s, I left Campion with tw. Native drangingment, and make through Marroe into Kadimir, and up to the middle of November was occupied in an even the principal an iest Kadimiria it mple. Mr. Horse, posteroi ner

of Marroe and Pe hawar, accompagned me, and it gives me pleasure to take that he carried out his part of the work in a z-long and succe-film and a. Occupturning to I din in N vender, I halfel at Smiket, in and a to complete the rough drawings mad to

the field, all s to await further orders.

The O vernment of the Panjab at first within a continuance of the Pand array to the Salt Range, where several reinstructure is the Salt Range of the Salt R

The Government of the North-Western Provinces, however, is and I my services, and I left Sigliot f e Mutten in order to the latter of the following in the filter of the filter to enroy e me of the orchitectural landings in this neighbourhood. Busching Muttre on the 9th Polymary 1869, I mareful to Burdrabin and opened work at the snoon at Himla temple, called Munder Goliel 1) ji. The Reverent Mr. Simp n. Chaplain of Muttre, bud been apprinted to tak photographs, and by a mutual arrangement his visited my campear budralum, Dig, Governmen and Vatelijus, Sikri, in order to take photograph of the pertentar portion in the buildings that would best illustrate that and itselfs . After Bindral un I visited the temple at Goverthun, and the pulsees at the and Fatchpur Sikri in sure and completed 18 drawings, pl-u. d tails of the berlihous. Mr. Simpson took to plintegraphs, and the illustrathe store Mer we at the time, together with it riprice notes, and inpublished in one volume, by order of the Secre-THE A CHITA tary of Sta - for India, at the Iralia Office.

- 4. The Kuchmir photographs and drawings (photographed) are also be published at the Italia Ciller in our volume, not the next the Kuchmir wire the next forms the first in the est of volume which it is proposed to publish in connection with the operations of the Articular like I Survey. The distributions are being preduced from the original mention the Photographe Department of the India Museum by the "autotype proint outless," next as the refers permanent. My drawings are also being the pictographs of the refers permanent, as well as for convenience to continue of the volume.
- 5. In M ch 1960, when at work at the pulsees of F telipse Sikri, I received erder to held myself in re-iness to proceed to Engle 1 for the property of making arrangement for easting one of the another arrangement for easting one of the allowers are also arrangement for easting one of the distributions. I proceed to English South to order to collect the mecessary details concerning the mature and extent of the work.
- 6. On the 1st of May 1869 I left Bombay, and arrived in Loudon on the 2 drd of the month.
- The Secretary of State for India sanctional my engaging three suppress of the Royal Engineers to be trained in the second flowed Engineers to be trained in the second state of taking cases in planter of Paris.

The authoritient the South Kensington Museum. London, builty photo of their coordinate of the control of their coordinate of the control of their coordinates of the control of the contro

Mr. Franchi is frequently employed by the Kensington Museum noth the take a to of furcing sculptures, and is one of the most expert modell is in Landon.

It was soon obvious to me that the method of making che to mould with gelatine was the most suitable for Indian sculpture, in respect both of exmany and rapidity of execution, and the three sames were set to make

ca a by this process of a cries of Jaina sculptures that had been sent to the Mr. and by Sir Barth Frero.

I then made an estimate for eating the Eastern Gateway of the Sanchi T pe, and obtained the sanction of the Secretary of State for India to the purchase of the new any materials. In addition to the gelatine product the support underwent instruction in piece-moulding, chay-squeezing, and gutta-percha moulding.

I was also eccupied, during my stay in bondon, in making fair drawings from the rough field measurements and drawings of Kashmirian and Motten building, and in arranging, in concert with Dr. Forbes Watson, of the India Museum, for the publication of the two series.

On the 2 th October 1869 I left London, and arrived in Calcutta, are in-Jenney from London to Sancia. Jamed by Strycont Bullen and Corporate Heath and Jack in, of the Royal Engineers, on the 26th

N vemler.

I remained in C leatte until all the SS bexes, containing 25 tons of nuterial, lad left Howard for Juldulpore; and on the 18th December I arrived at the latter place, and commenced transfering the boxes into country carts.

It was found that upwards of sixty curts would be required, and I was delived as all the 20th December at Julimpers until all had been premised. I then presented to merch to Sanchi, reaching Danish on the 24th December, Sagar on the 22th December, and Sanchi on the 7th January 1870. Here I found that the

A quantity of lamboo, rope, and other requires material had been collected at the

The tope is situated on a sandatone hill, some few hundred for above Sanchi, and as there existed no extreme to the top, I had to engage a number of soch to carry up the material. The carts containing the plude of Pais, &c., arrived on the 10th January, and from the data until the 17th Corporal Jakant we say used in basing the boxes moved up the hill, while Senerant Bullen and Corporal Heath, asserted by even native in address and two matrics, exceed a mail dd cound the Entern "Gate of the Tope, and commenced cleaning the carved stem work which had been increased with vegetation.

The working tents were patched close to the gate, and the loxes arranged in Costing operations at Sandt.

Lanuary the first unit had be a made, of the work a arranged successfully from that date until february the 7th when I are all hat, at of 757 square feet of carried work to be cast in order to put his perfect of the pate, 477 square feet had been east, leaving 240 pures for the doc. I also calculated that the average daily work of the whole party for paris.

I modellers would be fairly represented by 15 square fort of on ting in planta.

The whole cost consists of 112 pieces, and the had pieces was completed on the

<sup>\*</sup> The restrict gal way, although it was crapada has perfect it it. . Specied to the last to not their release gale has a greater name of detached their it omitted up to any bose charge than the correst main the same regard. As in the neutron gate has a "lease forward," such to about one it. It promises the property of the state on it. It was more product to avoid risking any accounts by selecting to court the more secure of the two gates.

The pinces composing the "parent" cast more have to be carefully packed for removal to England, and on arrival will be fitted together, provious to any steps for reproducing the regulate number of spins of the gataway. When the first perf

ent of pleas have been improduced, they will be Large cond photographs of the contahuilt up to represent the original gateman to onero as a type for other copies, and I propose to have large-sixed photographs taken of early piece of the cast to accompany the detail drawings of the other cared gateways a mid the Sanchi Tope.

The chief difficulty throughout the work was to make all the gal time mould before the weither became too hot. A dry atmosphere in more favourable than a damp one, and therefore a great difference in the dry as I wet half the run t eter realings remiers a high temperature less powerful to affect the grilling; but it may be coughly clated that without 12 hours with the therm mutar below and the gelating fails to obtain that clustic consistency which is no essential to the parties

tru of ugad monld.

In order, therefore, to run a survey ful rure with the daily incoming heat, it was nece by for each modeller to work his burd of and I have pleasure in the aperi I favourable mention of Surgeant Bullon, Carpenale Jackson and Heath, and who throughout the work displayed untiring energy; ale , in stating that the molementional rative modell - worked will-S. Burnald and bin wany, must the Madray School of Industrial Art : Nodin Chander Mükerji, Ben mali Pal, Kh. 41rum Das, fr m the Calentia School of Art; and Ginler, mal lle fr m Agen.

He Hen or the Lieuteaant-Covernor of the North-Western Provinces remarks in regardly that "Characteristic ought to keep this in major."

I was informed at Bushulum that a drawing of the original form. I the 's mple might | f and | the walls of the Fort 24 Japan [I have had tracted and of the formula tracted and the first as which him the Amber Palues, Japans — If H. C.] the are flike the result of the interior of the temple requires a great deal of party and a lithink that the Mahant Goshama hould be arged to preserve.

The taught at Goverdham, called Mandir Hardeny, also require much recall; the roof is very meste, and the superstructure of the set or; we described by Auran with A note in the Amaly mated List of Bilding in the North-We term Proxinger inter—"About twenty years note Basic Bildway to Stock of Bhortpair had it repaired, and the present Rajah, Jacobian Singh, into declaring 40 10 w."

17 Pals at Dig and in very on that repair, and not frequently inh late I by it Raja of Bhurton and Lateli is it iters.

At lat hour-Sikri it appears that a parties of the Duresh Fund is at the displayed of the Collector of A., and that argent repairs are executed in buildings that are occupied.

Akl r's office is in 100 as a dak hogalive, and the Eircul Palas 1 the horizont, one of Akhar's way a more a untally secured by European 1 to per that a proper dak bungalow will be built und so rais so these built in the repairs of which are now sanctioned.—11. 11. C.]

Shark Salan Christian term term pool preservition, and the only building that appeared (during the day at lat light Sika to respire conserver the city at the soft make of by the Saltana and the Khas Me. 1.

The act of the reals in both hould be runned to protect the concernity on the rain, as well as to tak away the air of neglect that he concernity is building.

The micket temples in Kalmir an model in a ruine of the The Malinaja hould however, to method to produce the interesting run. It could be not I made of Marstand should be kept for from junct, and it would be great to execution in equation roof of the temple with a title hour and a servings.

The tack a milital impleut Pade than had been dofted to the some rof represent in order to present the bound to read the color but interests.

The end size and the temple at Bhants provide to refer one care, and, thing the most perfect that kind in K. hair, a wall of the affect to fall rate with a distribution than the present At Vently research and to a literate up to require or returning. At the other timple they, P than Wangat and Sringgar, the jungle about the presented from the kind up the came of the arts, so as to allow of these inepation.

### Note on the Industrial Arts in India, dated May 1879.

1. Although influence have been long active to toling to det to ate the original character of Ludein armament, no great attention has been drawn to the sul je t until within the last iew year.

2. Change have be a wrought or gradually that they have never litter notice from those who eduly computions have been to infinite to the me argent and pro tient wants of this country. It is only by comparing the mannia tures of the or the correction with those of to-day that a full estimate can be form-

of the harm that has been done-

3. Owen Jones, Sir Digly Wyntt, Redgenve, Taibke, Taingles, Dr. Roye, Tayler, Forbes Watson, and Birdwood have at various times deawn attention to the peculiar merits of indigenous Imban ornament as applied to work of utility; but the first con utuated effort to being together the fact of the subject as at present known was made when, in 1574, the task of compaling a descriptive catalogue of the Indian objects exhibited in the South Ken is the Museum foll upon my-lf.

4. The opportunity I then had of examining both the collection then and at the Indian Moreum served to alreagthan and etimolate the interest

I have always to but in the ground subject of Indian archite time and set.

3. As Arrived gical Surveyor in the North-Western Previous from 1 as to 1870, my observations were me thy arrested to old temple and luxidings in Kashmir, at Agra, Delhi, and at Sanda in Central Ludia; but architection is the parent of industrial ornament, and the laster is often to be valued not along for it int in its beauty, but for the interet it per a in a ie. minde. architectural origin.

6. The enflections of Imilian art at the Indian Museum and at S th Kensington are the result of various Exhibitions held in Lord and alcolo Many of the be a specimens of malorit of ind size that line in collect d in this country for the international gatherings of 1851, 1855, 1862, 187, 1870.75

and 1878, have accutually both - uned for one or other of the fastuntia

7. From those it is entitled to trace that gradual interduction of Europe a forms of creament which have not even d to mpert a debusing and impare character to the original and a learing any byed in the industrial arts. This do real the has I late, and specially ince the lat Palibition at Paris, exerted much commen , but if the corruption of Indian are by the amountrolled maxture of dyl and with no apprecial in Europe, how much more should desirfact a and disputs be felt among those who are in the country, and in whose hands has the p-wee of rendering believe

If the deliment appears in the collections at home, it certainly is med-

more apparent in the objects daily produced and old to us in this country.

5. I know of me example so deployable as the present condition of A . It pottery. In form r days this indictry we not I far semesful well-not 1 to a Today it is detectable for its weith a imitation of lingh is jugs of the with vine loves I qu't this of Aleg in patters, a lkr displayed for I at the railway station at the sh, and always or a second I dings of regret at what I con mer a bean it up completely minel.

P. There are, however, many countries to handlers I me as I to the our Western instea and tyle some o me had a dan use the il mond for the .

It is from difficult to tell piece of D the from a light Brancol . . . . The kuft mutal work of Gujrat and Gialast have resilient in the cont inkernals, pi tur frames and small elejects, in tend of to hield and arm-Catjota are now often woven on designs furnished by to teles English chealers, and condense are applied to l'inglish in ad of Indian fabries; and the pait run in K. Innir shawk are no longer the energic adid speciment of pure Indian colouring and outline that has made them famous in years gone by:

19. The importance of helping fudian industries to recover their old characteristics should, I think, be a madered in come tion not only with the value from an educational point of view, but with the view to a direct I well which may

aron to the craftsmen themselves, and altimately to Government.

It. The leve of decoming art is very much on the in real in Europe, and is diffusing itself all or r England. People formerly centent to accept anything from it has a mor "curiosity," are now more discriminating as to purity of etylo. They know counthing of thodu forms and mythology, and of the exgenerics of the Ministinan errord forbidding the innuction of human or animal shapes. A domaind may not instantly result from neh growing knowledge, but in training the possible luture of Indian arts the tastes and knowledge of pute us and buyers are worthy of consideration.

12. Museums and Art selecte have been stable hed in this sentry, but not with any very precise aims as regards Native art. This schools want ample means and special opportunities for studying tuilian arts—II. II. C., 15-7-52 J. To repuler them of use they should be a versible and attractive to Native, and said

stored with objects of the lest indigenous art.

13. Instruction in European style o afases the Native student, and unfits him for the development and advant ment of his own eraft. With the less wish t-adeptor forms, be faile, for want of suppaths and understanding. He reverts, however, with readiness to his own traditional eranment.

13. To bring this back to him requires ample illustrative material, in the clip that of which list he main springs of the power of Government to moder times. Give a clever workman a good Native pattern, and he works willingly and with ance wer; but he is incapable of correctly interpreting European forms.

15. The varieties of communical manufactures in India are immeriments and alix, some dying, come dead, and some persected. To revive and preserve can, I think, he had necessary had by taking stack of the best annear and modern work and making it may of reference to Native.

16. I believe that a circle illustrations collected from the best type would not be very dufficult or could be produce. The sources from which they could be

oltained aro-

(o) prehitectural that and curved urnament; (b) ancient works of industrial ner; and

(1) from existing illustrations of varieties of Indian art in English and foreign books on the subject.

17. The drawing published in single plates could be purchas I by Native, or in a cases distributed free of cost; schools of art and museums should have on view and for sale a complete out.

15. I believe that a simple press of giving illustrations will accomplish such good, and after it protess itself to be successful the scope of museums undefined of art may be extended.

10. As an example of where good patterns seem to be wanted, I may mention the case of pottery made at Mulian. Two Natives know the secret of making the two hade of blue, by mone of which they produce leasteful effects in the limited of their traditional foliation. They apply this with great vicess to play, thee for me pine, vaces, &c., but they have not seems to the thomsand without of ormamental outline exerting in the carrelments of old Hindu and

Muhammadan buddings. They also want more knowledge of the old pot system; which India can supply from its those corners. Encouragement would extend this industry, which does not conline itself to Multan, but no still alive in Soul.

- 20. There exist throughout India in ny thousand craftemen able to produce admirable salesble works in textiles, pettery, notal, wood and stone; and I cannot but think that it would be more profitable to encourage these people in industrial pursunts rather than they should be left to labour in the helds.
- 21. To keep up the interest among workpeople who still produce good manufactures, the establishment throughout India of an industrial order of merit, my a multi or certificate, would be of great good. It would be in reserve to show us in the award of such recognitions; but there are many civil and military official work and about to them would alone be a relief in the dult monotony of official work, and would excite an interest, not only in India, but amongst their friends in England.
- 22. To collect the necessary materials for producing illustrations of the best known ancient and modern art industries will require the co-eponition of Local Governments and Administrations, but with such a istance, and with a small grant from imperial funds, a staff of clover Native craftsmen may be organized to correct the work.

### H

Report from Captain H. H. Cole, R.E., on Special Duty, to the Secretary to the Government of India, Public Works Department, dated Simla, 10th May 1880.

I have the honour to acknowledge year letter No. 120B., dated the 20th ultime, requesting me to aloust a report on the subject of a definite the me for carrying or the conservation of monuments of artistic and instormal interest.

- 2. In the memorandum which I be hears to ansex to this spect I have pointed mit that, for special reprire, preservation and illustrations, it will probably be necessary to create
- Divisions similar to that in the North-Western Provinces for-
  - (I) Bengal.
  - (2) The Punjah.
  - (8) The Central Provinces, Rajputana, and Central India.
  - (i) Bombay and Hydemhad.
  - (0) Madeas and Mysac.

It may be found on investigation that one Divisions should not be limited to a Presidents or Province. For instance, it may be held convenient that (wan a should be placed under the Archaelegical Division in the North-We terminated.)

I have recently imported the architectural and historical meann into to be found in and around Labore and Dathi, and hold the strong pinion that, if the

<sup>.</sup> I have drawn up a list of some I .. nimb are which f i

with the man has both of pulpopal in place the relation the solver of the time and reglect which prevail to such a large extent, very submittle nel reduction work will be the real reduction.

By a Lish re and D this there are many other places in the Punjah having to the circuit result of a manuscript, most of which are continued in the eller of the publish i in 1875; but I would never that Major-General Commonth in, i.e., hold to a ked to formed the names of any of joins of archaeological interest in the Powing which he woulders. If for special care or progression.

The a comple work at Lahere and Delhi about to justify the establishm at of a separate Architectural the some for the Valual Loutlying monuments can be taken up gradually as find on provided; but I find that it is a separate the important centres, being emvinced from what I have be a utbat as interioral monuments have suffered, and are sufficient in the net for which Government is responsible than from the natural decay at runs preduced by runs or veg taken in the jungle and deserted place.

The perduring the present year to be able to investigate some of the most remarkal I buildings in Bengal, the Central Previous, Report of the harmonic feedbar of the harmonic

di i ito prop - 13.

The Agent to the Governor General in Central India has recently recommond to the ego tation regulation famous. Buddlast Tops at Sauchi be cleared and the fill a rate by sea or ord, and Mr. Bernard has invited tray opinion. I not only tak M jo lead may "proped to clear away the pungle an exceedingly good, in held that the string up of the following arises is one of the first and most open or we will be a first and most of the local distribution of valuable antiquities and works to India. Whe engaged in making a case of the enstern gateway in 1-71, I bed so indimining anadose the fragment of the fuller with and we ten gateway: also of the small gateway near this large tops; and the clave being the slip Mr. Fign. m's book on Tree and Serpent Worship. (See page 111, VII and VIII) page 110, plates XV; and page 119, plates XVIII, XIX, at XXI.)

From these metaral drawings (most of the pieces of stone carvings are on the ground) it will be seen that some of the stone-work is missing, and would have to policel in plain blacks in order that the structures may be ladd up excircly.

I am at present able to your particularly only of Labore and Della, and of what Mr. Heath (the Executive Engineer of the Arche degree Division in the North-W. 1 on Provi - v) has done at Agra and the neighbourhard.

Of the latter work I out init a separate report. The results are estimated by a sect. In the highest decree, and must be med gratifying to their author, Sir John Straet by. It work is to their author, Sir John Straet by. It work is to the day as in the North-Western Province chains convincingly have barbarous it at the weather for preservation from other parts of ladia.

3. Without entering into a lengthy description of buildings which are well to we and have often been described by Major-treneral Commingium, a.e., Mr. Fergueson and others, I merely here note the condition in which I found some of them during my late visit, and take what I think necessary to prevent further decry or maltrestment, and what in certain cases should be done towards complete some about the contract cation.

4. Buildings at Lahore.—The first building that I visited at Lahore and did gateway, called the "Chanter fi," which is 12 miles off on the Multan result. It was the principal entrance ton garden, which no targer exists, and which was built by Z 1 in Nishun, daughter of Alangir, in 1044 A.D.

The gateway is square in place and had four minurets, three of which remain. The material is brick, laid in time morter and faced with bountiful coloured tile, at la ormanu stal chapes and litted, one to the other, like mosaic work.

The colours are unusually name rous—yellow, green, buck-red, dark-blus, light-blus, gold colour, orange—arranged in foliated patterns in spandrels, panels, whit, and lorders.

One corner of the gateway has completely fallon. Plans and elevation will be made, to show exactly what the present condition is. The tile-work is a limital, that I think the progress of decay and min should be stapped by scenning the all ing sensor and by propping up and strongthening the weak persons of the massary. The fullon debrie should be charred away, and the plan cleaned up and arrounded by a stone railing. The cost of the so measures will be estimated when the plans are completed.

The Shahlimar Gardens.—The Shahlimar Gardens, at at t mile from Lahore on the Ameitser road, were laid out in 1617 A.D. by order of the Emperor Shahlimar.

They are extensive and infromuled by a fine wall and massing galency. The prolon, although conclines called the "Versalles of the Punjah," are indefer ally kep up, and the canals of water and fountains require cleaning out and repairing. The barneless and kionques in the centre were hoted by thanjit Singh of their murbles, and have been I ally restored, and the brick-work laid on edge in faccinal privates on the terraces and walks should be put in good order. At one come of the cuclesure is a homeon—at present dirty and neglected; but there are in high parties we be decreased by a hard colourless variety, such as is used to preserve all oil-printings.

Painted wooden decorations of Shah Jahun's time are not very common, as me h has been detroyed in his buildings. It is therefore all the more safe to eye to come across specimens which are not past preservation. The central harmlant of clourest walls of arabesques printed in freece, and some righty painted weeden to illings. To present damage, measures should be taken by some one specially ongs of for his acquaintance with preserve for reviving and preserving old painted week. Plan are in course of preparation of this garden and its buildings which will permit of an estimate being franced for keeping up the place and what remains of the decarative works.

Golabi Bagh.—On the road to the Shahimar Gurdens and about half-way is a gateway which formed the cutrame to the Golabi Bagh. The garden has dispirate, but this hadding, at present occupied by the pale, is a fine specimen of coloured tibewalk (in "Assái," as it is called, and is worth preserving from the rum which is rapidly evertaking it. Drawings are in common of preparation showing the secretary and from which the estimate for preserving the building can be framed. It ill, in my upinion, be merely reserved to the present veners of tile-work, and to troughbout the existing massary and make the roof people against rane. The building should be cleared and fenced round with a good stone tailing.

Begumpura.—Beyond the Gelebi Bagh and off the road to the left in the Shahlimar direction is a small building at a place called Begumpura, where the tile-work i very

fine, and worthy of the same kind of protection recommended for the Gal L H of A gate. Brawings will be made

Shahdara. - Shahdara is on the north bank of the Ravi, and about 2 miles from Lahere by the State Railway. Here are-

(1) the tends of Jahangir, with enclosure and T is I Jahnnels at Shahilara. garden:

- (2) Boursi;
- (4) the tomb and enclosure of Asuf Klun and that of Nur Jahan.

The whole place, excepting the actual tomb of Jahangie, is utterly negle ted and unweed for, Bahadur Shali, Almund Shali and Banjit Shugh corried off many of the murbles, and the compation by the British troops after the Sikh war amount great damage. There exists, however, an evil which has caused, and is still is using, one asing and ernel destruction. Between the tonda of Jahangir and A of Khan is the saral, which has been converted into an engine-part and mannhearing depot of the State Railway. Holos have been knowled in the walls, il grounds broken up, and the various gateways occupied by the mileay campleyes and their families ! As I have said, the manadeam of Jahanger is the only building at all cared for. It is in the centre of a large squarewelfast cochesure, and was built by Nur Jahan in 1625 A.D. It now consists of a raid terruce with lefty minurets at the four corners. Helea the terrace is an open columnate, which surrounds the temb of the Emperor. The inlad marble-wick and painted decorations are very beautiful and well worth protection and renovation

Bef to Ranjit Singh's time there existed a muchle pavilion on the terrace, but the materials were removed by him to build the bamblati in the Hugara Buch in Lahore. My own impression from the style of this baradari is that it was removed leadily from Shahdara. If this is as stanted on careful investigation to be the case (and telerable trustweethy evidence could be obtain I by measurements and inquiry), I think the building night to be re-tored to its former position. Along the walls of the open columnade round the tourb is a Dado of bountiful tile-work, now invisible on account of cours of wintewnsh: this whitewash should be enrefully removed.

Plan of the Shahilara enclosures and tomb are in course of preparation. The gamben round Jahangur's tombie a mere waste, and pure of it is let out for onliner caltivari u. S mu of the gateways have fallen to ruin, and should be, as far as

As an essential part of the whole conception, I am strongly of opini a that the grounds should be put in thorough good order without any expensive bathailture, and that the encroachments made by the flavout the south corner should be restrained.

It is difficult to roughly guess at the probable cost of putting the grounds and buildings in repair; but I hear that orders have issued for the railway to move their hop and to leave the place, so that the most of this would not be debitable to the

Badshahi Masjid .- The Jama Masjid, or Bad linhi Masjid, near the fort, was built by Aumograb in 1674 A. D., and in m Jama Marjil. a fair state, baving, through the exertion of Maje Parry Nubet, when Deputy Commissioner of Lah re, been repainted justile and gen rally required. The famile were subscribed by the Muhammenda of the city. Repairs to the columnade of the building require to be completed. In front of this

masjel is the Huzuri Ragh, in the centre of which stands a marble partit a with one beautifully juinted cellings, composed if not wholly, of partic of a content of the copela which formerly surmounted Jahanger's tomb at Shahilara. As I have already stated, I think the capula should, if possible, he restored to its original partition.

The Roshnai Gate.—The Roshnai Galency, near the Huzuri Bagh, has been builty restored, and is an example of the damage done when work of this kind is left to unqualified

and maympatheric hands.

Ranjit Sing's Tomb—Is in fair preservation, but it has some fine horeways of carved wood, which require cleaning and preserving. Sir Douald Macleod had the into it columns trongthened with iron clamps.

The buildings (i.e., the Jama Masjid, the Rockman Galering and Ramill S. 4's T. 4) call for an operial treatment, but should be in charge of the Executive Engineer of the Punjab Architectural Division.

Wazir Khan's Mosque.—The Wegne of Wazir Khas, built in 1635 A.D., in the centre of the city, is a magnificent pecture of a docted common, and is one of the most valuable are itself a perfect gramm as of a docted common, and is one of the most valuable are itself a common to it forms the marks as much subject a docted and to indeed a docted continuation of a relative for the student of decoration and most and have been where at 1 d, the illustration of architectural matter, such as the tank hose possesses professly, will do most to revive and encourage the securic art of hodis it is nothing a know of. The mosque and its embosing walls and buildings are built of trick, veneral over with the cut and laid like massic work. Poing in the limit of the dusty city, it is endly in want of cleaning and repair. Plans and drawings are being made, but any necessary funds laid out in probabing the existence of this be mitiful building would be well worth spending.

I also strongly no mound the easether of Re. 5,000 for the production of set of detailed illustrations of each in difference in Imban buildings based in the mosque and for repeding 250 sets by channeling graphy.

Lahore Fort,-There is a great deal of interesting architecture to be seen in the fart, if une a uld calv get at it. On the Inter build go to the Intere Fort. ing the outer gate, the wall of the fort and police is to be seen covered with a signs in inlaid manuelled rules pocular for the representaatom of human ligures, animals, and signs of the aduc. The whole of this should be preserved und made as source as possible against rain. On the 10th f April, when I mist went to examine the buildings, I found myself at past a the outrance to the Shirt Muchel and Seman Bary lor a centry, because me ; from Kahul were a nimed in the hundrings. The fine old pallared Di ind and three e-round is in new a a common harrack room filled with mon's bed and kit, and the room at the back of the throno used for during in. The wall and critings of the latter were one finely painted, and the stegrater with the marble throng and capela, are not likely under pre ent care meetane to meet with very touche treatment. The hailling is also tanch speilt by being col dall cound, instead of being, to originally and like all buildings of its class an ipen paritim.

Khwabgah.—The Karelgas of Shah Jahan, of marble and lattice work is to use a segritish chapt—from its traditions about a cosmitable a place of the time worship as could be selected. The harding is each of on all oil by only waided paralales, and a new and utterly unoutable madern timber roof has

been ad led. The feat is at a place which Shah Jahan would in at likely have a letted for his couch to eated the air through the marble lattice.

Moti Masjid.—The Met Masjid of the Palace, a small and be stiful building of white marble, is now blocked up, and otherwise adapted to the purpose of a transfer the surface quite impossible to examine the building closely. The has a latwest this and the Dissert-An to used no a in pital.

The remains of -me of Juhangir's buildings are used no the Sorgeant-Major's quart in And some denot buildings belonging to the pulses with punted ceilings (use of which a year ago harely a used the departmental whitewash brash) are in use of officers' quarters. The only buildings not to present use are the transaction which is a cert of museum of old weapons, the Shirk Mahal and the Variable, a major meridic pavillon of Aurangaib, much out of repair. The latter should be contented and thoroughly removated.

The Shish Mahat.—The painted ceilings and walls of this building were received at the time of the Prince's visit, but it is not difficult to see the difference between the new and old work.

Careful plane and drawings of all the buildings in the fort are being mad, and will be submitted, for prolonging their existence as works of art and for terminating their incongruens relations with the military with cities. I would promined that all the buildings of interval be, as far as possible, restored I famed in some to keep them sequente from the barrack buildings, and that they leskept up solely as show places and as the only means of perpetuating one of me them of and interesting specimens of Labore Imperial Megal art. When it is considered what an ontery would be made at a proposal to ensure \$2.1 or \$P.D. Into an undergoined railway station, or Hospitan Court into a property of things at the \$P.D. Into an easie of this go at the \$P.D. Into a large of this go at the \$P.D. Into a large of this go at the \$P.D. Into a large of the go at the \$P.D. Into a large of the go at the \$P.D. Il fire t lk lift.
The for and Pa building.

The Fort and Palace buildings at Dulht.— As in the case of the Fort huddings at Lalice, those at Delhi are alm at all in unhary occupation.

The Diwan-i-Am.—The great pillared Diwan-i-Am, with it line marble in cancepy and throne, is used at a centern, and on the right of the throne is a bar fire rying and ignored. To the left of the throne is an one-look of bank is now of the Nabhi Bark keeps at a bijers' off walkapt. Above and at the back of the throne is a small open ups through, the walks of which are faced with the brated black marks mosaic work; but this work, no well as the intaid pattern on if the panels is not as formerly. Some of these panels were a coverd by Sir John John at the time of the Muting, and are at the lader Off. Museum in Louden. They might be brought to this country and phreed in their original position. The door at the back of this country and phreed in their original position. The whole building heads the end, kept clear and repaired.

The Diwan-i-Khas—This leantiful pavillon is not in military of applicant that he is discretefully treated. To prepare for all ligited in leanour of the Prince of Walne, the moulded fretwork of the woods a colling in the control of the haddling we repainted in block, red and gold in task of whit and gold, the original above, and the control rose was converted into a cort of starved tar-field the effect, it is not be to be ay, as har is and placing. Fortunately the outer through has the design of a certain intact, and from it the original colour and pattern can be restored in the ceiling of the centre hall. There is a great deal of

I southful pointed with the first at Delin, and it will be more to engage a properly qualified a term of pintons to do the work. The confect the Distant-t-K is in an up of condition, and the proposal to renew it with conference to me to be right, provided the old ceiling how a left undertured the can only be done by leving the present weather home to which the old ceiling a south and by instant the lemi jubits from the tip of the rest.

The paint I work in the cling of the enter colound should be simple repairs than before a state operation it is near in time and pettorn, but rended durable by means of transparent carm her or other remedies familiar to the expert in painting restoration.

In order to examine the bears of the roof, the colling was published in the colling of the the

The decreations of this building are perhaps the fines' of any done in I Shah Jahan, and, if I may express the opinion, no expense or care it odd to prodong their existence. The unride floor of the building seem in fair order the Dade of mosaic wants repair, many stant having been picked out and the life or some place filled with coloured places. The leantiful, galled stall equal to the upper part of the murble pills, about the enrefully to tred white it wenther has we had off the pattern, and the roof must be made perfectly wax stight.

Khwabgah, Baitak, and Saman Burj.—The murble building on the right of the D. and a comprise the Kh strate, Bastat, and S. a Barr, and are filled with beautiful murble traceries and printed ceilings and walls; but in the conseverable more of the decoration has been an enter-beaten. The marble mean Dudo round the rooms is a good deal damaged and a pures repairs. The paint deciling in the small king a which project thereof the river is damaged, and the ralling which form rhy went round the front is wanting.

The two small resums towards the D. a.-Khar have been plantered and whitewashed, thus hiding a painted and grit wall. The red sandstone column between them were chunamed over in 1976

The Hamman - The II reware buildings on the left of the Dir el-Kher had all their punted cellings whitewashed over. The floors and I other mich report and removation.

As in the ext of the buildings on the right of the Diese-i-Kbar, the said the columns which face that building are placeted over.

The Moti Masjid.—The Met Mearle, the to the Diesa-i-Khat, is in four condition, but petty require are necessary to put the marble floor and inhall work in order.

The Haiyat Bakah.—When hid out by Shah Jahan the fert hundings were all connected by row red redomade, and there were several gard no, one if which, the Bary \* Bak b, has drapp ared, but the bath in the entre and two marida pavils as still remain. The latter have had their marble in it Dados what wash d, one building is used for serving out most rations, and the other as a gymmanum !

The Rang Manal.—The hang Maser, or printed parez, to men with assert, re-roofed, and partitioned off to sait the requirements of a mass-hance!

Many other buildings in the forture put to improper uses; and I think there can be no two opinious on the necessity for keeping all the interesting and

I he grat Centil in and collination of European and Native view rate.

It would be easy to fence them all in one enclosure: and after they are repaired and remove it, and the troops an accommodated in other and more suitable building, to whole should be handed over to the out-uly of the beat civil authorities of the primary cared for.

Place are being made and estimates are in the of preparation for doing all that is a y, without including the rest of cruttury entable buildings for military purpose elsewhere in the fort.

The Jama Masjid.—The Jama Masjid is kept repaired by Muhammadan and by eccu-

The "Minimb," of pulpit, of white muchle, wants repairing.

Zinath-ul-Magid.—The Zi off-al-Magid is a fine mount, but in 1710

A.D. by Zinath-ul-Nisan, laught of Aus agril.

It was used a few years ago as a Common it be cry t but the base normal. Who would was liberally applied when artillaren n were quartered in the building during the mutiny, and the while place is the religious. The building is in Delhi, in what is a flest Darvaguage to i hould be put in good order. Plans are preparing for an estimate.

Buildings at the Kutub.—The Kutub Minar is in good order generally, but
the result of the court of new relations broad
is falling away through cru lung. The should
the first produce by be unit accure, and the carried work, which has
the first spin 1972.)

Is our discoluted by weather, should, if possible,
be cleaved.

Imam Zamin.—The tomb of Imam Zamin, which is surrounded with red annistance screenwork, is much covered with whitewash, which is a great disligurement.

Jamali Kamali.—The temb of Madei Jamal Kamali, 153h A.D., near the Metralle House at the Kalah, is the remains of a meet beautiful building; it stoods in an enclaire new overgrown with jungle. The floor of the building is of white marble.

and r and the walks so Dado of parth whitew, bed the Building to of white marble, and r and the walks so Dado of parth whitew, bed the "The apper walls a unangulated by the last with a local tries with and the ording is ornamented with in indicate a local plat r and a proceed at have been removed. The whole place about the control up, and the tumb put in a good tate of repair, It is not purify to a larger than the till work, but a good deal can be done to preserve the building.

Maejid of Fazalullah .- The Me jid of F zelallal, Thes A.D. time J - 1 Ka ha is a massive tope twiling of a therable beauty. The enclosure i er grow with Mary I of I aminish jungle, and the mesque itself is filthy and used by cattle. The place should be observed and jut in a state of complete elembiness and repair. A plan and outmale are laing muld.

Adam Khan's Tomb .- 41. or Kh n's T mb, near Mahra di date 15. 2 A.D. calls for no eyes is i treatment, but the most is the ter ! with regulation and almost le repaired and in la Adam Khare's Towntsecure; the ground about the torn's shall also be chared of detris-

Humayun's Tomb .- Hu yua's T.mb, 1315 A.D. The temb itself is in a fair state of repair, but the termir on which it star a has lest more than half its at the railing, and I R synn's Tunb. arche supporting the terrace stand in reed of r 1 1 ; much of the marble inlay is defoced.

The enclosure in which the tamb stands was formerly a denutiful gast u, with terra . I w. Ik- and entrance buildings at the centre of each wall. New the ground lust tall the character of a garden, and is let out in patch a to cult the I those were, until quite recently, the descendants of the Kings of Lelkill-H. H. C., 29 -- 52] who grow cathages and telegra. The gateway are all in a state of great disrepair, and should at all events be cleaned and a decree uguinst weather. A small temb in the garden, with a mideralic pretent of to I may, to in use as a cattle shed, and is much in need of requir.

I think the system of letting out the gardens of tomb to cultivators very enworthy newns of adding to name pal funds. A plan and drawings is a Ling of Ha aga 's Ruch and employment for patting the buildings and go I o in g

Near Hamayan's T mb is a collection of buildings, all of which, me at f otslet. their interest and beauty, should be in the charge of the Exective having a life Punjah Architectural Division.

Chausath Khamba.-The Chausath Khamba, date 1610 A.D., is a markle paralian of 64 pillars, with beautiful muchle ocr - 11work enclosing it. The building is in fair one Chauseth Blumba. but some of the perferated screens which had in parts disappeared have been rea well IN BUILDING

Nizam-ud-din's Tomb. - Nizam-ad-lin's Tomb, date 182; A.D. la len repaired and ailded to in Akhar's and Slinh Jal n's time. The interms of the building wants leaning up and pity repair, and the plaster of
the done wants requiring bodly.

Require to the above buildings should, I think, be defrayed out of a special grant for putty regains.

Fatchpuri Masjid.—The Patchpuri Masjid, date 1610 A.D. The stone-work of the interior has been control with white wach and the curved Date with red point. The stone alaba of the road threstoned some years ago to give way, and two comes of pillars with are a were built up in the centre, forming an intermediat series of pillars; but the second of the many pattern as the old ones and should be removed, the real long transitioned with iron joi ts. A plan will be prepared for this.

Saftlar Jung's Tomb.—Saftlar Jung's Tomb, date 175%, stands in a large enclosure, with gateways on all four sides. This a flar Jung's Tomb. tomb it elf is in fair order, but requires some elight repairs. The garden is in a bid condition, as I, like that of Hamayan's Tomb, is let out to cultivators. It should be put in good order; the en rance buildings want much repair. The principal entrine has a till 15 point decaling in a small apartment facing the temb. Plans will be prepared for ne covery repairs.

Kila Kona Masjid.—The Kila Kone Ver II, date 1540 A.D., is a beautiful building in Press Ada, and requires considerable requir. If no will be prepared.

The old buildings at Topking kates at Par o Kits, Percented, Sullen G. ri, &c., should be pleased of détail, but further inventigation than I have yet been abie to make will be incressure.

I recommend strongly that a sum of Hs 5,000 be can thoused for the preparation of detail drawings of carried wood and stone omain, it and of pointed de critique, in which the Belki brokkings abound. The plates should be published for general and acculation, in order to stimulate Indian industrial act and for use in schools of art throughout the country.

In order to imageness the conservation of works of art and antiquity

spend and run the a for the fundal. I be a fundated the fundations of the fundated to the charge of this Division, and, as in the case of the North-Western Particular, to be under the Chief Engineer, and his work carried on a dark the immediate orders of the facutement-Governor issued through the Chief Engineer.

His first duty would I think, be to put in hand the works and projects inclosed by the Government of India, and to propose any fresh projects for the protection for moment in the Lee Lauthorities recommend for preservation or to evation. The only different that I would say at letween the new division of I that already ut work in the North-We term Province is that after initial measures for preservation or contouried are complete, the buildings should be kanaled by a to the civil anther these for on tody and keeping in good order.

The head-quarters of the Experies Linginger in charge of the Division should, I think, I at Lab re, with a suc-division at Delhi.

He should, I think, obtain the co-spection of the Mayo School of As and save employment to the pupils trained and a Mr. Kipling, as far as possible, when delp its oriminated detail have to be reputed. Attached to the fixecutive Engineer's Directhers should be a phangrapher, who, if possible, should also condition the qualifications of head draftsman and re-to-soft positives. A properly qualified mun could be obtained for a limited angagement for R. 100 a month.

As regards the provision of funds, I beg leave to submit a suggestion that discretionary power night be given to District Officers who are into each I is line minimum to and fundings to invite subscriptions from Hunts and Muhammahars. Large portions of the revenue are alternated for religious purposes, and it might be possible to make over some of the embayments for purposes of repairs and maintenance of temples and mosques.

### Hi

### Report on the Restoration and Preservation of Architectural Buildings in and near Agra-

Every visitor to Agra is aware of the great leadily of the mountent and buildings in the neighbourhood. The magnificant architectural works in Agra itself, at Sikandra, at Fatchpur-Siker, at Bindrahou and in Muttra, attract or obe of visitors from all parts of the world and from every some of India. Moreouse, Mr. James Fergusson's well-known "History of Indian Architecture" has unally these monuments familiar to the world at large.

Within even my resultection, Agra was, however, a vast area of splandid buildings more or less runnel.

When Sir William Mair became Lieutenant-Governor of the North-Western Provinces in 1868, he was a uncorned for the malety of the palace in the Agra Port, and directed me to inspect and report on them. (See Appendix D, page V.)

I found many in a dangerous state, and none that had not been somewhat defined. Subsequently to this, works of restoration were common it.

Sir John Stracker's Minute of 25th August 1875 alludes to the runnous residition of the Port buildings in 1874 and 1875, also to the work of restoration that had southined, and notices what had been speak by him up to 81st March 1875, the total being a little more than one lakh on buildings in the Port, on the Taj, and at Fatchpur-Sikri.

I now have the pleasure, and the honour, of reporting in the marked further progress made in the last five years, through the establishment by Sir John Strachey of the Archaeological Division of the North-Wistern Provinces.

Buildings at Agra.—I visited Agra in April last, and found in my works complete and many in hand. Mr. Heath, the Executive Engineer, is progressing very favourably, and the rist mation and repair at the Taj, at the Port, of Sikaudes, at Itmad-n-Dowlah's tomb, and at latekpur-Sikri are highly satisfactory. I hope in a few months to visit the work which is going on at Janupur, at Bundrahan, and at Matter, also to investigate the buildings in the Port at Gwalior, which are summerposed for their beauty and historical interest, and urgently require attention. Mr. Heath is anxious to take up the latter work, and I think it would be a good and convenient arrangement that Gwalior should become part of his divinion.

### Palace Buildings in the Agra Fort.\*

Pales lattings bottle For. The Movi Movid in the Agen Port has been completely removated.

This building is in truth about the perfect in this and proportion, and entirely of white muchle. In 1000 I found regulation hard at work on the rest and markly decrease and the coding and comices underweath were falling and decaying through damp.

In 1868 access was impossible to the Chitter Gates in the Machi Rhuman. They are valuable specimens of metal work, and can now be clearly admired.

The small Nagina Masjid, which is at one corner of the Mach lid was, is a 1 and ful markle building and has been placed in excellent repair. There is, however, a small markle known near it which wants cleaning and patting in order.

The Discar-i-Am, and its benutiful throne and chamber at the back, of moule work, is in capital order.

In 1865 this fine building was need as an armonry, crowded with stands of no kets; and to schop it to such a purpose, wouldow of a European pattern were built in and the whole of the interior columns white washed. Now the building has been thoroughly opened out, and is in appearance precisely what Shah Jal in made it.

The or lemmile of the Mechi III is is under repair and capidly assuming its former and original state. In 1868 I found that the columns were nearly all allower than tening to some down and the marble capida on the cast had been partially taken flown as a master of safety.

Leading from the Mach Rhow a towards the river is a large suite of Baths recently opered out and found to be runned. The various densed rooms were once painted, but whitewash covers the walls; and the markle window-frames overlocking the Jumpa have been locked of their lattice-work. Measures will in due course be taken to repair this part of the Palace.

The repairs to the Discorn-Khus have been much med, but are incomplete as not. The inlated work is here very fine, and the building itself is in the last anylow Shale Jahan's time.

The copper-gilt roof of the Samue Berj is being relaid, and the whole building renovated in a salufantery way.

The interior of the Shish Model has been partially restored, but is very dark; and without a tack or candle the mirror work and printings manned to seen. The introduction of the utmost possible light into the chandler from the onde walls and the completion of the repairs will greatly impressed building. The coloured markly ballo will require very careful treatment.

Much remains to be done to the A'm Mahal. The ceiling of the front portion of the partition has been taken d wn and tran girds—substituted. The markle ceding will eventually be rest red. The cating at the back is in disrepair, and the partied will be preserved, at re-remated

<sup>&</sup>quot;Through the last three years "" A the harmonic terms are been restricted to a condition of any or become to a ricy against further being word for law or become to be summed to be ricy against further be now. Me and its been opened out, it has caused to be a among, and the subconvenients of his Mr. The Dinar described with first oil grainst have been away. The law of the other work of a condition peared. There will remain most the firms of the name of a but work of a condition peared. There will remain most the firms of the name of the guardies and other lideous which will I go, had made long to the firm of John Starty of Morale of Starty of Starty

The famous exceles South G to are at present outside the paville of the the Mah t. I think they ought to be carefully set up in the Internal of the y would be well seen, and preserved much us possible from dirt and dut. A detail of wing should be made of this gate.

lispones which are only wanted are just communiting to the Jugoci flay's columnade,

In 1848, I found the J Langer Madal. Little lett r than a rain, which climate and neglect were making worse.

than found may accomplishing those and de troyed the adoured colling ; whitewash covered the walls; at let ne-work by in heave in the centre of the cont. Now the limits of the building can be appreciated, the whole having be in built up and partial analymneyated.

I think further experiments should be made to clean off the whitewash which halos the painted walls. I am not sequented with the process, but I be no whitewer has been see esfully removal from old from in France and in It Is: but this I can ascertain. As far as the stone carved-work is concerned, the winder has not been restored; but I had that quite enough has been done for the maintenance of the structure without repeating the carved details at great cost.

The third Bury, to the right of the Khas Makat, is being restored and nearly complete.

Jama Masjid.—The fine Jama Masjed but its principal gateway in the muting; and the Tetpolas which was a wall I enclose to find the site for the Rajintana State Railway station. What is I it is the mix que is in fair order, but the interior walls above the mirchle Dado, which rutes all cound the building, are covered with whitewash. This building should, I think, community Mr. Heath for petty repairs. It is well worth keeping interested in good order.

The bountiful temb of Rm d-v-Dowled is in process of being completely renovated, and the work is nearly funded. The manne of the exterior walls had suffered to tribly, but now has been renewed in a skilled to meet. Something will be done to clean and preserve the splendid interior paratings. As I have pointed out, this kind of work will require an expert.

The grounds are not yet put in perfect order. The garden immediately round the tomb is commwhat backed after, but beyond this nothing has been done; and the enclosing wall and side buildings have yet to be repaired. Mr. Heath has much plane and drawings of this building, and the detailed drawings of the interior painted work will be most valuable.

Chini-ka-Roza.—The Chini-ka-licea, beyond the tomb of Itsudes. Beech, is each to be the resting place of Afzal Khan, Shah Jahan's diwan. The building and surrounding grounds are much rained and econoical by cultivators. The tomb itself is govered with beautiful tile-work in numerous patterns and colours, and should be preserved.

Fatchpur-Sikri."—A glance at the photographs No. 20 to 25 in the book marginally a ferred to will show what was the force and the finite of the state of Fatchpur-Sikri in 1.50. Now all the most important huddings are well in hard and approaching completion number Mr. Heath's directum

<sup>&</sup>quot;" At Fa hyper. Adve the archor at the house to must f the Durgah, which had shown suggest of tenture here, been eterographed. I am early to see that I reveal at heavy, perhaps the granded but me of the see in existence, is said in require summ man. But as Patchpure vides under 41 and of the see in existence, is said in require summ man. But as Patchpure vides under 41 and at 32 ansies a great shed has to be down. —(A. 1 and see Julia Stonaday's Messis of 1872)

The connade of the Pat by rester of has to receive a me triffice is a 1 N and require S in of the marble tillay in the action of the marble tillay in the action of a "Both of a town gute way require remainly und chajian are broken in the and out the quadrangle. The he utiful toward Salm Charlis in good onler, but the interior pointings require attention to be pothern well preserved. The interior of No. 1 Islam Khrese temb is whiten also and want cleaning; the gateway near this tomb and facing the Ball of D. A. wanter pairs, and the mount of include maride and tile-work.

The point delegration on the walls of the sanger neglit, I submit, to be protected, but not remaind.

'Il. Pala I her use is now in a very good condition, the principal archive thaving I on strengthened and made good. This is a most creditable piece of reducing.

On a de the prin and mess not Shakh Solim's original angue, with bracket pullar, may be similar to the some in teach. This curious landing should be preserved.

In the misenry then dere underseath the mesque and all over the rums a number of their weavers are employed; and it occurs to me that one of the unoccupied buildings might be used for an industrial Art School for stone-curring, it such an institute of early large supporting, or to established on a practical last se. The ground round stail Parl's two bears is overgrown with larges, which remains to be cleared away.

The Ha ke Pe' is about to be repaired. The Zerara Marial, between the Jodk Baie's k was and the Hathe Pe, requires repair. The Peoch Mak ke wants repair, and the states boding to the top is mostle. The thereof Khar is undergoing repair, but the Discussion want putting in order and further rum arrested. The Perkink follow, which is exceedingly beautiful and uch in carring, has yet to no two from Mr. Heath its share of attention.

Il dam of the Kan Makel wants cleaning out and requiring.

Akhar's Klund and require cleaning out, and his tutcherry, now the dik hungshow, wants attent in now had the screen-work bring broken.

The Judh Base place has to receive one petty repair, and it will be an improvem of to open our the romane doorways, which were cheed up when the building was used a a tabeil. At present there is only one way of getting into the building.

What remains of the painted work on the walls of Merians's house should be

The grounds all at the Natchang-Secri buildings have been vastly improved by charing debre and planting trees, but more can be done with advantage. It would also be a good thing t have the name of each landing put up.

Sikandra.—Great demage is said to have been done to the buildings at that the standard Sikandra when Lord Lake to k Agra in 1505. The authorst of the gat way buildings knocked off. and the beautiful tumb building suffered greatly ?

The principal entraces at Sikambra has been greatly improved by the testaration of its hands are inlaid work. The interior of the gateway he yet to be the ned out, as well as the building which flock it. The whole wall and the three other gateway a surrounding the build require provenies. The grounds

<sup>\* 2 1870</sup> I had a note of end mount! Frank World I that the reduction in the Present School, and the set of the

<sup>?</sup> This i find to be in square to the was done of the Limit Land to time H. H. H. L., and

on mich improved by Mr. Lawrence," it. Clienter, but a great deal to is to be done when funds are wall be. The new learn itself has been put in pleased andries, and the reperson to rely employed. Work is will going to the lower clean do not some of the nell touch. The verticals be fine hower to the mutual reting-place of Aklair has beautiful, planted work in the demonstration wall, which will not all revers preservery remains.

The Taj. The entrance growns of the Tay has been replied more tally, and the emboding walls of the good san now being just in order.

The magnet and its pendant, or "Jawal," are in go shorter; but in restring and reacting the interior pointings good shill and care are as every. Do rative painting is almost as of all to an art in Lainers, Tolini, and Agra as the theowork for which their budding are recovered; but the difficulties of once, fully convexting despectant had all to as are no manufacture, and there are no do that that men can be found, perhaps in Kashinir, but a stainly in Persia, who can do the work.

The Top itself has been most encountally repaired, and chince out in all the given of the original conception.

The actual tomber of Shah Jahan and his wife, in the crypt have yet to record alight repairs to the mosal and on of the image work in the chambered corruler above wants attention

Gardens at Agra.—The random at it. Taj is not beautifully kept up, but the water discould and fount in zero often empty) and ent; that could be greated time off, it would be a important to bring water exight into the garden at Sikunder and at Heard-v. Do lab tanks in need of larger expanditure then can be afforded from beat funds at the dispersion of the Collect; at it would greatly enhance the value of the content of the buildings at the places if sufficient money was granted to permit the endowners ing put in substantial order, after which head many so to keep them up

Mr. Heath has get some 100 plans and drawle of the heildings in he newtons of buildings and in the rest for previous, and bey form a calcular Archaelegual Instalm, North-Waster income of solving antiva architecture. It would not have a summental details of tile-with. In the drawle carrier, carrier, a though word work; but I am attempty of a about that the drawle drawle he had been predicted and possible edge and publish to a few and the travel in that Green in the course in that Green in the course in that Green in the course in the first and any particular one for the purity, it would be about the one drawing to a publishing them in the world for archite in a stall act works a Mingle like the publishing them in the world for archite in a stall act works a Mingle

Memorandum on the Conservation of Ancient and other Architectural Remains in India.

Lists of principal buildings.

The accompanying lists of laillings and monuments in-

Bengal, North-Western Provinces and Oudly Hyderabad, The Punjah, Rajuntana, C niral India,

Central Provinces. Mr in British Burma. Madrae. Bombay, &c.

thich I drew up recently, have been compiled from official lists and from hocks as Forga-son's Indian Architecture, Rousselet's India and its Native Prince, G noral Countingham's numerous Reports, &c.

The information available from these gourses is not entirely complete; but it has lings named are among those of the first importance, and are sufficiently n ... us to convine on a the leas appropriative of the large field which exists for our ring the historical art manuments of India.

2. I use the word "conservation," because it is me to include all that is required for the protection of works of art, and for the production of permanent and conrevient method for facilitating their neeful study.

Under conservation may be included-

(1) Controlly.

(3) Restoration.

(2) Preservation.

Carroly and preservation would appear to be duties which the local civil authorities could und rtake man factorily, whilst the work of restoration and illustration would require a stall present of special qualifications.

- 3. Custody will take come time and trouble to organise properly: an unintelligent and sle py of whiles would be no efficient guardian. I would recommend that a corps of antir custodians be enrolled in each district according to requirements, selected, p that , from positioned police or coldiers. They should wear a distinctive bodge, and have clear instructions brinfly oughaved on it.
- 4. It would be of a me educational honefit to compile for each administrative arm a alart and popular account of the most intere ing buildings and monuments. Those, printed in linglish as well as the Vernacular, would possibly tend to create greater Inturest and respect.

I. It might the be with while to affix to some of the most important P. Religi to have their near their leading a notice to ome ingrishable ment it. such as enormal or glazed pottery, giving the name dates at a live to con u d dat both in English and the Verna ular.

Nothing exposes a run to wnoton ill image so much as ignorance of its history, except, indeed, in the one of the who ought to know letter, and who, if n't determed by authority, remove or chip off parts of a measurement because if pose to historical or artis's traditions.

Prescriation.

O. Preserv from 10 n work which native Lospers might partially attend to, m, for instance, to

respect of-

(a) chanlines,

(6) Lecting down regulation.

But

(c) the a moval of thick jungle without injury to old buildings,

(d) clearing mins of deluis,

(c) setting up fallen pertune of a building,

(f) collection of curved or other transmental fragments,

(4) execum of ush ures to be post eatth, &c.,

would require a richical and special most tree to be undertaken by di rict auth :itic.

- 7. Realer from in a work which could only be undertaken after the collection of very full information. It is in it If a very delicate affair, for, unh it be first ran, i fin Restaurat B left alone. The couly nature of such work is, moreover, a good reason for treating each case in detail and after full consideration.
- S. Mr. James Fergueson could furnish a list of important architectural monuments which hould be kept in a constant tate of parathus or rest ration, and I think he would probably include time of the following:-

Bengal-

List of some than build my that we - thy of repair or restoration.

Shir Shah's Tomb at Sameram. The Golden Me que at Gaur. The Adinah Monque of Mallah. Temple at Sairi at Parison'li. Temples in the Puri District, Orises.

The North-Western Pr vinces ond Outh-

The Jame Ma jid at Badaun.

\* Jama Marjift at Jampur. . Arala Ma jul at Janujur.

\* Aklar's Palace, &c., at Fatchpur-Sikri. \* Temple of Govind Dava at Hindralam.

Akhur's Tomb at Sikn dra

Palaca buildings in the Agra Fort.

. The Taj Mahal, Agra.

· Tomb of Itmad-u-Dowlah, Agra. Hall in the Fort at Allahabmi Tample of Vishe hwar at Benares The Punjab-

The Kutub Minar, Delhi.
Humayun's Tomb, Delhi.
Jama Ma jid, Delhi.
Palace buildings in the Fort of Delhi.
Colden Temple at Amritan.\*
Tomb of Ranjit Sung at Lashore.
Palace buildings in the Fort at Indiage.
Tomb of Juliangir at Shahdara, Laliure.
Shah Gardes in Multin.
Shah Sham's Tulices in Multin.

Rajputano-

The Arhai-din-ku-Jhompra, Ajmir. Tower of Victory of Chitter.
Jains tomple at Mount Abu.
I her at Amber, near Joypore.
Palagraphy.

Central India-

Railings and Gateways of the Great T pe at So, chi.

Pal building in the F reat Gwalier.

Tomb of Muhammad Ghans at Gwalies.

Temple of Khajaraho.

Jain Jample at Owalies.

Contral Provinces-

Hemarkall Temple and circular enclosure at Them Cha. Hains at Kar abel near Towas Pine Temple Jangsir. Temples at Markandi.

Harderatul-

The Kylas at Ellora. Caves at Ellora. Caves at Ajunta. Temples at Markur, Berar.

Maine

Temples at Hullibid. Temples at Behr. Jama Hastis at Sravana Belgula.

British Burme-

Information too meagre.

Madean-

The Seven Pagoslas, Madras. Temple at Chillandaram, South Accet. Hamps. Tops at Amravati. Tirumala Naik's Palace at Madaga.

Bambay-

Temple at Ambernath.
Buildings at Bijapur
Buildings at Ahmidalad.
Temples at Pircudial, Dinewar.
Mespes and Tomb at Tatta, Sind.

The Miles court of thereby towards the maintenance of this building, and restarations are an When I vected the comple on the 11th April land, the place was as throughd a literatives that I but see opportunity of closely examining the building

9. The collection of illustrative matter basan importance quite apart from hitorical or aminological interest, us it is by ah mount alone that the architecture and art of ladist illustrat -can be studied. Builders and artisans of this great country cannot be acquired to ke pulivo the matinate of their style, xeept by unking the mealves acquaint d with the varieties of the ancient and modern art of India. (In come tien with this subject, I lately drow up a brief note on in hearrial art, which I submitted to

Government. See Appendix (i, page xvi.) 10. To inaugurate the a home of conservation, it Duties of a Convergence of Assistant and other Architectural Remains in will be me by to select a Comercator, while duty it almiki laladle.

(a) to convey to Level Gavernine its and Administrations the wishes of the Government of India concerning the entirely and preservation of

(4) to arrange for the production of heal manuals, &v.;

(c) to inspect buildings with the view of advising Government as to the incasares necessary for repair or restoration;

(d) to direct operations of draftsman for the purp of collecting illustrations of Indian urnamental art.

11. For requir, restoration and illustration, a special organisation will Irequired for early'd localities. There can be no better plan thun the committed on (after the plan of Sir John Strackey) of a special charge in the Public Work-Department of each great Province for the preservate and work of art and antiquity.

In many case of repair, &c., Lord Governments have no latter agency than that of the Public Works under their orders; but it is only by those who take an interest in such work that it can be properly carried out.

Mr. Gibbs of the Bombay Civil Service, when Assistant Commissioner queter Sie Bartle Freez in Sind, arranged for the repair of the Jame Masjid at Tatta, and says, in a Minute on the Bombay Archael giral Survey dated June 1873, that he got the work done by enlisting the sympathic of the Muhammadan community; and it was afterwards estimated that the cost would have been four times the amount if the repairs had been done by the Public Works Department.

For special regum, preservation and Illustrations it will probably be Divisions for special repair and pro- necessary to create divisions similar to that in the North-Western Provinces forpertatum.

(1) Bengal. (4) { Rembay.\* Haiderabad. (5) { Madrus. Mairus. (2) The Panjab. (3) { Central Provinces. Rajputam. Central India.

In anticipation of the appointment of these establishments being ancies at I would recommand that same of the buildings much r the immediate jurasher a of the Government of India, mentioned in paragraph 5, deadl be visited with the visit of accretaining the mame and approximate cost of undertaking non-ry require of restantion.

<sup>&</sup>quot;Major Munt, u.c., was appointed Caretor of Ascent Buildings for the Hersing 19, 1879, and was working in correspondence with Mr. Burgors, the Archeological European In Respired will be made us to how for his base been able to majoritake regain, and whether he has any and while atablishment.

13. Comend Cunningham in 1874 made the recommendation that all ancient to the the proper canodians buildings not in use for worship should be pleased under the sale charge of the chief civil antherity of the district; but it is appealably in the case of fine buildings associated with military crahinshments that very clear ruling is required as to what should be in the charge of the civil authorities. All buildings of historical or artistic interest to furt like those at Delhi, balance and Gwahier, should be taken out of the large of the multiary authorities and placed in the barge of the boal Government. At Agra the palace buildings and other works of art in the Fort are in the charge of the fracture. Engineer of the Archaeologual Division of the North-We tend bravine; and this arrangement presents no difficulties, as in any case of disturbance the whole of the buildings would, like these in the city of Agra out ide the lart, one under military occupation and charge, and the civil authority temporarily of the lates.

In Madran the custom is to consider the charge of all buildings of historical or architectural interest to be vested in the revenue officials of each district, excepting the that are under the Public Works Department for repairs.

There is no organisation yet established in Madras for either investigating or average the wonderful and Leantiful monuments of that Possidency.

14. As far as the discovery of buried rains or works of art is concorned, the art of the Present of Manuscription. True are Trove Act of 1878 appears to furnish the civil authorities with all messary power for a gard to the preservation of buildings and meaninents, unless existing legislation is the out, on Act untilar to Sir John Lubbook's would seem requirite.

#### T

Extract from the Proceedings of the Government of India in the Home, Revenue and Agricultural Department (Surveys), No. 30-42, dated Fort William, the 2nd February 1881.

Observations.—Her Majesty's Secretary of State having sanctioned the appointment of a Cumter of Ancient Monuments, whose duties will be to superintend, under the Supreme Government, the conservation of the most celebrated and important examples of national archaeology and architecture throughout Imlia, the Governor General in Council is pleased to appoint Captain H. H. Cole, a.m., to be Curator, and to direct him, in communication with the Local Governments and Administrations, to inspect the principal monuments throughout In lin, the historical and archaeological value of many of which has been brought to notice by General Curninghum and the other officers suggest in the Archaeological Survey or Imlia, in order to frame a scheme for their protection and conservation.

- 2. The national buildings of the Indian Empire are so numerous and so valuable, as well from an archaelogical as from an artistic point of view, that the Governor General in Council feels confident of meeting with ready co-operation from all the Provincial Governments, and desires that all possible assistance may be afforded to the officer to whom the organization of the new department is confident
- 3. The appointment of Captain Cole was notified in the Gozette of India of the 20th ultimo.

#### K

Extract from a letter from the Secretary to the Government of India, Home Department, to Local Governments and Administrations, dated the 12th August 1881.

2. The main object of Captain Cole's appointment is to give the Government of India and Local Governments the advantage of professional advice in questions concerning the restoration and conservation of ancient monuments throughout India. All schemes for such works should, therefore, be causid rest by Leval Governments in computation with Captain Cole, but he will not be directly concerned with the estimates for the work, which should be prepared by the efficient of the Local Governments.

3. Should the estimated east of any work be more than the Provincial Services can afford, the Level Government will be at liberty to apply for any additional sum required to the Government of India, by whom a certain sum will be set apart yearly for such purposes.

4. On the work being approved by the Government of India, or in the event of the Local Government latest able to carry it out with it assistance from that authority, it will not with the Local Government to carry it out; but Captain Gold about the referred to from time to time as common may require during the execution of the work, and any suggestions of his deadl receive full consideration.

#### L

Letter from Captain H. H. Cole, R.E., Curator of Ancient Monuments in India, No. 512, dated Simla, the 10th November 1881, to the Secretary to the Government of India, Home Department.

I have the honour to submit the following recommendations for dealing to the best advantage with the various architectural illustrations in course of proparation in my Department.

2. Fourteen years ago, when the subject of Indian architecture was exciting a great and general interest at the Paris Exhibition of 1867,7 I addressed a note on the collection of information about the architecture of India (dated Naini Tal, June 1867) to the Secretary of the Science and Art Department.

In paragraph 2 of that note I thus drew attention to the importance of reviving in this country a knowledge of its national art:—

- "(2) Apart from the value of representing Indian ambitecture for study in England, there would be a good opportunity for representing at various museums in India a bistary of Native ambitecture. The education of natives whose molecular is daily beging more and more corrupted, and all originality and identity being lost, is a matter worthy of serious consideration."
- 3. I again drew attention to this subject in my report for the year 1569-70 in which I submitted a brief narrative of my surveys in Kashmir, the North-Western Provinces, and of the ensting operations at Sanchi in Central India. In the appendix of that report, quoted as follows, reference is made to the illustrations prepared in Kashmir and the neighbourhood of Agra, at Fatchpur Sikri, Bindrahun and Dig, which were published by order of the Secretary of State at the India Office:—
- "I. The study of Indian Art and Architecture is more important than would appear at first aight, and I appear here a chart note on the principal sime which I endowour to keep in view in collecting illustrations.
- "As buring on our knowledge of India the study is important to those who wish to kin w who the people of this great country are, and what state they existed in before the Muhammadian invasion."
- "The faith, east of civilisation, and prespecity of the natives who compled any particular period or locality may be found ingrand on the architecture of the country, and these stone records are all the more precious when it is considered that there are few written annals that can be trusted.
- "2. To English architects the study offers a means of ducklating the true position of architecture in England, by witening the tens of observation and enabling students to realise the definition of architecture as an 'art,' and not as a system of outgoing.
- "2. Architecture in India is a living art, influencing not morely the forms and details of buildings, but giving birth also to marrly all those ornamental details which under so many Indian manufactures valuable as being at once ornamental and useful. The instruction, therefore, of parties building and articles in the different etyles of Indian architecture appears to be the chief number for preventing undern Indian buildings from lacking instructive matire men't free from efforts to copy European etyles, and for modering Indian consmental manufactures of sufficient ornamental manufactures of sufficient ornamental manufactures of sufficient ornamental manufactures are sufficient.

<sup>\*</sup> The illustrated entities of Mr. In the ample of the Committee of Architectural Ambiguities of Western Italia, od ted by Mr. T. I. Hope, no., tearther with the photographs of Indian buildings enhibited at Parks, brought the subject prominently forward.

"4. With special view, therefore, of making full use of such illustrations as are now being produced of fudian buildings. I vanture to suggest that the photographs and drawings be freely circulated throughout India for study and reference.

"Schools of Art. Native Colleges, and Museums should. I think, exhibit them in series with rema ular notes. Municipal communities and civil authorities should possess sques of each series for reference, and I cannot but think that many appropriate forms could be soluted out of which to design managed and other buildings for malive purposes." "-(Appendix, quoted free the Report, duted Camp Specif, February 1980)

- 4. The illustrations in course of elaboration in my office are of three kinds-
  - (a) Rough aketches to illustrate preliminary reports.
  - (b) Plans and drawings to illustrate recommendations for the preserva-
  - (c) Plans, drawings, details, photographs in illustration of Indian architecture and art.
- 5. The accompanying printed catalogue of the rough drawingst prepared by my draftsmen during the last year shows how much material has been collected. Many of these drawings have already been faired out for the Lahore and Delhi projects.

Bouides these, Mr. Hasth, Executive Engineer for the Conservation of Ancient Buildings in the North-Western Province, has prepared a considerable number of excellent drawings of buildings at Agra, Bindraban, Mahaba, Hamirpur,

Janupur, &c.

6. As I have already pointed out in my report of 10th May 1889, these illustrations to be of value wheald be reproduced in the less possible atgle, and published in aingle plates for no is released of art throughout India, and for rule to artisens. The less turn in the world for architectural and art works in Morel & Co. of Paris. They have published some unequalled volumes on Oriental Art, and have abundant facilities for reproducing coloured drawings by chromolithography, by at hing, and by engraving on steel and copper-plate. I have no besitation in recommending that they be entrusted with the reproduction of the drawings above mentioned; but it would be essential to find out what are the points to observe, so that the engravers, &c., may have the least difficulty in reproducing from original plans and drawings.

When I have accortained this, the drawings can be sent from India to Paris and published without further delay.

I would suggest that authority be given for me to incur a sum not exceeding Rs. 5,000 allotted out of this year's grant for conservation in getting a selection of the drawings reproduced.

During my ster had year at Rimmshun, I now in progress a Hindu house which we being built at the expense of a Luckness banker. It is not too much to any that it was the most hadrons y hybeid structure I have ever seen. The expitals were louis, the polished surble pitters finted, the details Hindu. Mahamundan, fiether! And the decor and windows closed by green venetices.

<sup>+</sup> It is namecessary to print the flat hers. It consists of 460 plane and details.

#### Catalogue of Works of Reference bearing on Indian and Oriental Architecture, Art, and Archæology.

(linder correction.)

Some six months ago I procured lists of the Indian and Oriental Art Books of Reference in the Art Library of the Kensington Museum. These lists I now give, keeping those on India separate from those bearing on Oriental Art. They contain a large number of most valuable volumes, many of which are out of print and difficult to get. Edwin Parsons, 45 Brompton Read, London, and other dealers in sare books will generally ferret out a copy, If it is going; but both Museum. Thacker, Spink & Co., in Calcutta, and Thacker & Co., Bombay, have most of the modern works, and some of the reprints of the earlier ones.

Provincial Gazetteers of the Indian Empire can be obtained at the various Government presses. Hunter's Imperial Gazetteer of India is published by Trübner & Co.

Pergussin and Taylor's Architecture at Beginpore, and Architecture in Dharwar and Mysore, can be had of John Murray, London, but the photographs are out of print.

Fergus in and Burgess' Cave Temples of India is procurable through Thacker and Co., Bombay. General Cunningham's Archivological Survey Reports are published by the Superintendent of Government Printing, Calcutta.

Dr. Burgess' Archaelegical Reports of Western India are published by Allen and Co., Loudon, but can be had at Thacker and Co., Bombay. Mr. Growse's Mathura Mamoir is published at the Government Press, Allahabad.

Biddulph's Tribes of the Hindu Kush may be had from Thacker, Spink and Co., Rajandrahda Mittra's Budn Gya, Bengal Secretariat Press, and my official and illustrated Reports on the Conservation of Indian Monuments are being published by the Indian Government.

A cheap edition of Houselet's India and its Native Princes can be had of Thacker and Co., Hombay, price Rs. 9.8-0.

The following are interesting works:-

Ujfalvy, Bouedon: Do Paris & Samarkand. Hachette and Co., Paris, 1850.

Faria Sonza: Hi tory of the Discovery and Conquest of India by the Portuguese; translated by Captain John Stevens, 1694.

Athanasina Nitikias: Travels in the Documn, 1470; translated by R. M. Major, Raq., Hakluyt Society.

Findansi: Shahnameh, in Persian and French (to be had at Thacker's, Bouday).

Tod, James: Rajasthan (a reprint to be had at Thacker's, Bombay).

#### Indian Guide Books, published by Messes. Thacker & Co., Bombay, and by Messes. Thacker, Spink & Co., Calcutta.

### Report on Monuments in Madras, together with a Note on Works undertaken.

Seven Pagodas, Vellore, Trichinopaly, Madura, Tanjore, Kombakonum, Chillambaram, Congoveram, and Bijanagar, dated 23rd June 1881.

### Mahavallipur, or the Seven Pagodas.

The rock-cut remains and ancient trustural buildings at Mahavallipur as at all after whith of the city of Madras, and may be reached by the East C = 1 Canal, which runs pirallel to the sea-shere. My visit was paul in February 1 .... when I can fully may test t' very remarkable and valuable monuments

- 2. Various accounts will be found in " Descriptive and Historical Pavers relating to the Seven Pagedas on the Coromar bl Publications. Comet," by W. Chamlers (1772), J. Geldingham
- (1798), B. G. Rabington, v.A.s. (1880), the Revd. G. W. Malion (1841), Leanur J. Bradd ek (1810), the Revd. W. Taylor (1840), Sir Walter Elliet (1841). and C. Gubbins (1553), edited by Captain M. Carr, printed for the Madras Corernment, 1569.
- 3. They are also referred to by Mr. James Fergusson in his "History of Indian and Fastern Architecture," 1870, pages 184, 175, 826, 830, 274, 333; and ngain by the same author in Fergusson and Burgess' Cave Temples of India, 1580," Chapter V. VI, VII.
- 4. Besides the er, drawings, plans and sections have been made under the direction of Colonel Sankey, C.R., R.E., Chile Engineer, Madrae; and Mr. R. Chisholm, Su; intendent of the Governm at School of Art in Madras, has made a complete set of illustrations of the Rathan.
  - 5. Photographs have been taken by Dr. A. Hunter and Captain Lyon for the Madras Government; also by Mr. Nichalas Photographs. Madrae.

Nors.—As an much post our to done be very simple remains to preserve the great major and the smallerful manimum that I she tall a limited between the title Petersery and the 7th March I Hought it better to culture a professionary of The electric (which are taken from packages or remain so they are, give some idea of the state a I importance of the buildings. Later, I have that shanifed and accurate plane of a more important same a the procured.

There are generally, three classes of mountmental buildings-

(1) The in the charge of Laverum and.

(3) To act property of Vallers or in their up for worship.

As regards the grow a of funda there are

(It Deverment grant

(2) Public entire in me.

(3) Volumency was unitered by governa holleideals or out of anthromanta.

(1) Happenditure by Nature alece in their and a second

Salives of all reeds whenter is contribed large annuals for repairs to religious buildings, he, and the Trumes could be that here give for the purposes are property take such their s be with State embracional are national projectly, and so each thought not. I culture, a after 1 to fall into disrepair or to determinate.

- Mr. Adam, the lat Covernor of Moders, to k considerable interest in the annual tile, and early in February last apent some days in their careful examination
- 7. Mr. Hurnell and Mr. Burgess agree in adopting the date 650 to 700 A.D. for the exercation of the rock temples and busnellery. From this courle into it that the rock-out ediffees at Maluvallipur are the color to the moral phenofith Distribuse style of architecture of Southern India.

  and their value is moral to meant once enorming rangel.

The grante remains on it of-

- (1) The nine Rather, or is lated temples out out of the single boulder.
- (2) The thirteen of ves excepted out of the rocks at Malaxallique and two man at Saluvantappan.
- (3) 'The two great bus-solid of Arjum's passance.

Be ides the e, there are coveral structural temples, the in-t important of which is the co-called "Shore Temple," which has be go very a Landmark for shipping,

- 8. The accompanying ship have taken from the covering envisor of Maha alliput and Salurankappan in C land Sankey's volume of plane and execution, and I have in the I llowing a to a hopted the numbers used in that map to notice the monument :—
- 0. N. J. Pr farament Rates (unfinehol).—A monolith, 23 feet high, with the upper half corved into a tempor.
- 10. No. 8, Pilarsamman Rock ... This is a similar monolith, and is 25 feet.
- 11. No. 1, Fulniyan Kattai Ratha.—This is a similar monolith, and is 23 fact high (see aketch).
  - 12. No . 2, 3 and 1 tho of the custody to prece to eversion into a quarry.
- 13 No. 6, the "Alaires" or "Shee "To pl (we sketch).—This is a most convictable in common probably dating from the 5th or 9th a utury; and, if not the most early, is one of the beaux implies of structural principle Dravidian architectural. Being on the oil, of the sent-marked, in fact, by the waves—it has been much decayed by the setson of the similarly piller to be the waves—it has higher a rule of in the surf, and a clitary piller to left ore in the multi-of fallow blacks of stone. My impression to that there existed a colorant or perch in front, and that this column is part of the structure.
- 14. Closed Sankay's volume he plane and occume of the temple; but it would, I think, be well to complete the survey for elevations and details, in order to show the position of the currentling walls, parts of which are still traceable. Dedicated to both Siva and Vishin, the main chamber of the building contains a broken lingum, and the resultable has a reclaime again of Vishin, 10 feet long. The document of the pageods is much be as a laterplaced, and should be a deed one unit replaced.

The interior chambers should be elevated and he was removed, so as to completely reveal the planth of the exterior.

Sind should also be a moral to by bare the utilise of the alle which form the outer set of care.

The expond of rints of erespect from the reof is important.

- Tough and ches to the era. It should be on I prod Dalle.
- 16. Not. 12, 13 and 11, the In and E to a T of .- in tween the larger quarte hill and the village. Being in a c for Hindu wesher, they are early for to be this extent, and it is but Hindu is allowed in difference that in the sanctuaries. Colonel Sankey' v binne contain plan and of the of the laiding, aboving the interiors of the which a different plan and of the plan reliefs, and so ampilies a want to which Vermi an ilraver a tention ( e possible). Pergussou and Bargoss' "Cave Temple of In is ")
- and cowe, is carried on the solid rock, and measures 10 for here in the first new relief, representing Krishna with a gree per gapic (bend in a) and cowe, is carried on the solid rock, and measures 10 for here by the first high the roof over this rock realitions is built of moreover, and give the first of main water, thus destroying and we using any the entities, at the arrive with helpen. The roof skell he and empleaded, at the sole is, a state of galennized mire acting, and the one regit if with one of got, at a few of galennized mire acting, and the one regit if with one of got, at a lock and key.
- 14. No. 16, no unforshed evel execution—Inter time from an exhaustional values than an archaeological point of view. On of the from endmine is broken and the front half fallen away. The exist of appears have beecked up for dwelling purpose, and is all be found. The care charlets I is a fact the plan time of the existing the extra terms of the plan is order to present the first of a large the extra to find the cooking free, the feest charlet to raise of all a stone calling one wall.
- 19. No. 17, the Great Partels f of Arjuna's Parter.—One of the mintermarkable objects of interest. It is convert on two may or of grante rock, non-uring about 00 feet long by 30 feet average bright. Hele or Control of the man the except of the Naga Raja. The head of the R. ja. we hadowed by a makeded expend, fell to the ground. This should a who obtained and a relevant could make fast, not only to the budy of the easy of seek is of it is position, but should be supported by iron bare let into the two mass of each. To have of the bar-cellef replaces cleaning of and.
- 20. No. 21.—A care with alien niche, the coutre one entaining a figure of Maladeva, and the flanks having figures of Vishing In front of the care 24 feet off, is a circular cistern, No. 20, out out of a solid time and called "The Gonis' Churu." The feast of the care should be feased to prevent these of.
- 21. No. 24, lianess Temple see sketch).—This elegant Raths in a ure 21 feet 3 inches by 11 feet 4 inche, and is cut out of the did rock. It is in 1 preservation, hat skend have the three first up usage we the pill is fill with frames of wice setting to pre at the inner chimber being an upon y a a decling or each to we. It have and outle use for interprettly in a the lemples for gat ways, but within 1 protess or in this in tance.

the first of the f

22 No. 25, Fishware Care (see sketch).—The interior of the cave measures 20 feet it inches by 8 feet it inches, and has, amongst other subjects. I relicie of the Ruse Ventur and one of Sri Lakshmi, sented on a lotter flower with elephants proving the over her. The openings between the columns of all the filled in with fee a fivre netting, and the feast cleared of divers. On the case nion of my virial and ting had been going on dangerously near, and one huge boulder had been precipitated close to the sculptured cave.

Quarrying should be absolutely forbidden.

- 23. No. 27, the Raysla tiopuram.—This is on the hill overboking the village temple. It is an unfinished parch of brick and stone, and is surrounded by a good deal of a rub jungle, which might with advantage be outrouted.
  - 21. No. 25, slave couch with recumbent lian as a pillow.
- 25. No. 22, the Modisbanardial Mandapan.—The confitures in the cave, which measure 32 feet by 15 feet, are spirited. At the conth side is a hat-relief of Navayana or Vi hou resting on the head of the sarks Scho.

At the north side is a representation of Mahishamm and Durga in strife.

In the back are three cells, the contrat one having a lineam. One of the fewer fewer pullars has completely fallen, and might for appearance sake to replaced, but the rock above to an massive that there is no notate need of imposel. The culptures should be cased, and the front openings closed with frames of wire netting.

- 28. No. 3d, the Invara Temple.—A structural temple, 56 feet above No. 82, in the summit of the cock. It rests on a foundation of brick-masoury, but the appretructure is of atone. The rest has fallen in, and the debrie angle to be closed near from the interior. Creepers should be untersted from the mariney, and access at leasier the at present, as visitors have to aroundle over stoppery rock to reach the building.
- 27. No. 33, Faratarrani (Vinhuu) Temple—Colonel Sankey's drawings illustrate the hos-reliefs of the interior, and confirm the description given by large on proceedings of India."). This cave is unnecessible to any one but Illindu.
- 25. No. 37, Deaupodi's Raths (see sketch).—This monolithic temple measure 11 feet square and 17 feet above the present mond-level. The finial which energement the roof line fallen, and may probably be found in the sand, which about be removed in as to bey harn the plinth down to its base.
- 20. No. 59, \* Arjana's Ratha.—A monatithic temple measuring 11 feet 10 inches each way, and has a small parch 10 feet 6 inches by 3 feet 9 inches. It total beight above the floor-level is 21 feet 6 inches. It obside the cleared of the sunder is an execute the plinth.
- 31. Yr. II A., Natata and Stadera's Rath (see sketch).—Is a monolithic limit with an applial termination. The whole, including the porch, measures 20 to 1 ling by 11 to 4 toche, and the height above the ground 20 feet.

aking I there liather, Mr. Forgussian ways 1. Although these two lasttilat a 1 really attracting as countries of the patient below which the Instana have at
all to real upon I on their religious coldens, that true value, is as far as the history of
the states which prevailed in the north of holds for probably 1,000 years before they were
thought the incuminals of themselved in the temples which were exceled in the
of lastic disting the 1,000 years that have obspeed directley were undertaken."

- "The great interest of this Ratha," says Mr. Fergusson, " lies in the fact that it rapresents, on a small scale, the exterior of more of those Chaitya caves which form so important a feature in all the wastern groups, but all of which are interiors only, and not one so completely excavated as to enable us to judge of what the external appearance may have been of the constructed chaityas for which they were copied." This building should be desced of and.
- 31. No. 12, Bhisso's liaths (see sketch).—This is the largest in plan of the group of monolithic temples at Mahavallipur. It measures to fact 3 inches by 25 feet 9 inches, and is 26 feet high above the floor-level. It is interesting no representing the type of the early Buddhist halls; but being the copy of a worsten building, its excavated substructure was integral to the support of the immense mass of material above, and a large transverse grack occurred obliging the work to be alaminousl. For this crack there is no remark that I can think of, the and the alab be cleared away from around the a notific.
- 32. No. 43, " Ithermoraja's Ratho (see aket h facing page 15).—Is the highest of the group, but, like everything circ, is unfinished. In plan it measure 20 feet square and is 54 feet 9 inches high without the finish, which has fallen des, and, if found, should be replaced.
- 33. After the sand has been removed from the temples and mounlithe Now. 37 to 44, it would protect the monuments to surround them with a substantial well we as to prevent the sand from drifting back.
- 3). In the case of cases 11, 46, 48, 50, 51, and 52, we can the state of the prevent the interiors for m being used as dwellings, could be called the form could have for fishermen, or called held and the can only be efficiently flore by fencing round the catranece is us to preven access to any but antherized persons.
- 35. Unless the arms, in which quarrying is to be limited, can be thereby defined by substantial wells, it wild be better to quarrying.

  Constitute to be strictly complied with these any partial restriction.
  - 311. A native custodian skould be always on the ept to get to damage or undersationally.

    Country:

    Country:

    Anne to be appointed in order that a group e relief

may be observed.

### Velur or Vellore.

- 37. Velue is reached via Arconum Junction by the Madras Railway, and so miles from Madras. The town and fact are nearly i will a from the station. The fort, surrounded by a deep ditch, contains a most remarkable pagests, which I visited on the 18th February 1851. It is dedicated to Siva, and consists of two rectangular enclaures, each with a goparam or gateway. The outer gopuram has eight at enclaures, and is 100 feet high. On each side of the entrangular rectangular, or part of this granter. The lower part of the gipuram is etacured by earth, the way of which it all the converse in writer t make profess with has been done to recur the buildings inside the temple from maltreatm at (see ed. 10).
- 15. The interior colounades are picture que und effective objects in themselves; but the gen of the whole place is a stone pavilion to the left as you enter through the gopman from the citair. It is called the "Kalyan Mamlapan," duting from A.D. 1350, and is a remarkably beautiful and claborate edition. The figure carvings,

who hare me tappropriately applied to pillar, plinths and column, a , together with other ornament, chisolled with the most consummate skill and effect.

- The front row of a dumns ix in number are monolathic, representing resting he are griffing and clophants. The parties or untechamber has a wonderfully a read and pointed ceiling of stone. Beyond thus as the sculptured support for the idal.
- 40. This building, as will as all others in the pageda enclosure, was, until quite recently, partitional off, whitevarial and Laze rejuire. bricked up to enit the requirements of an are-nal 2 m. Owing to an order of the Duke of Backingham, this has all been remedied, and Captain McNell Campbell, a.z., Executive Engineer at Volue, has most skilfully re and the whole of the provide-romoved time of most from the thorse of the inche ires, pulled down all the unnightly partition walls, and classed the Kalyan Mandayan (see shot h) from top to too of its unaightly whitewash. The place, orth its marsellous neulphures, showing predigious labor, is a complete auch of Southern art, its restoration being a work of the over or ditable kind. Captain Coupled has some plans howing what the arsonal onclosures were, and how they ld k d up the pageda corridors and buildings.

### Trichinopoly.

- 1. Teichinopoly is 252 mile distant by milway from Volor, and situated on the river Kaveri, about half a mile from its looks. The Muhammadans call it "Natar Nagar," from a saint "Natar," whose touch still exists and it developed for loss on. Trickinopoly property of the played in important part in the war is tween the French and English; and the house below the great Trichmondy rock in which Clive lived is still above.
  - 12. The principal manuscrite an-

(1) The rock, 230 feet high, and no temples.
(2) Toppa-kulam, or tank, at the feet of the rock.

(3) Partified paged out Wyneum ban Tirumali.

(1) Touch known as "Chamla Sahili's."

- (5) The Dac-ul-Umara, Palace of the Nawala of the Carnatic and mosque.
- (6) Tank where Bishop Holar was drowned.

(7) The great temple of Sringgum.

- (5) The temple of Jambukeshwar,
- 43. I visited the above meeticoed buildle go at Trichmopaly on the 17th and goth February in the order in which they are moved. Mr Sewell, the Collector, care on every facility, and very knully accompanied um to the haddings.
- 44. An. I, the rock of Trickin poly and its tropier .- Provinue to the order given in 1845 to demolish the numberts, the rek formed the citatal of a large firt, one mile long by half a unite wide. Now the fortifications are demoli had and only those of the nek sem in
- 35. To a and, a very pi towers gallery has to be traversed with columns of g. . - jur curving ( o or lik to - A, whi to bould be row sed) (see sketch). Higher up is the miss spens or unto hamber of a remple to Siva. The steps of the u - t car da frightful docat r to a panio-streken crowd of Hindu worshappers in 1840. Passing up legher till over trep steps out out it rock is the temple lo Come h on the emmit. From the v randals a fine pen minic view may be had of the surrounding city and country, and its ob vated position-some 236 fort-commands the plain for over 20 miles. The destructive influence on temples and

their approaches are dist, whitewash, and leaky roofs; and until means and found to systematically clean out the offensive dist, to remove all traced the distiguring whitewash, and to keep the nest secure against rain, this most picturesque apet will gradually be a tractions.

16. No. 2, the Trppa-kalam.—At the foot of the rock to the west is a fine tank with steps down to the edge of the water. In the centre is a scandapars of pillared porch. The houses round the tank were once occupied by Europeans, and one is pointed out as having been Clive's residence.

The lank and its central mandapam should be kept in repair.

- 47. No. 3, fortified pagoda at Wysenudan Termush (see diagram) .- Wyscandan is a village on the road between Prichmopoly and Allaurai, and about 3 miles from the former. The fortified pageds in the village was occupied by the Prenult in 1753, and resuptined by the British troops under Major Lawrence. "The nee augunying rough daggram, which I made in February last, shows the dispose tion of the walls and the perition of the circular bastion, the calcul terms of which supports the various temples. The different gateways or gap news ar covered with inscriptions which remain to be translated; but, as far us I am uver, nothing a known of the history and date of the buildings. The districts of Madura and Trichinopoly were constantly diva tated by the incursion of the Mulmumuhue, and it is probably due to the that the pageds was furtified and unale a stronghold. The possible design renders the place spreadly interesting, and its more modern association unike it interesting, imbependent of its achitecture; so that even if the elecularum of the inscriptions beings no fresh facts to light, the plan is worth preserving. I senderate our entil praise of the r me at of deal tive weeds and erespect, and of the envication of whitewark from the same neg of the exercises structures.
- 45. No. 4, Chanda Sahib's leads.—The remains of Chanda Sahih (mandered la 1752 by Manikji, who commanded the Tanjore force in alliance with the English) are interred at the shrine of Natar Anlia. The temb of this latter suint has the appearance of having been converted out of the materials of Hunin buildings, at I may have been creeted about the time of the invasion of Mahk Kafin, who came from Delhi in A.D. 1316.
- 49. Bo this as it may, Natar Aulis is a person of great local sanctity, and is said to have come from Communitiesple many bundred years ago.
- 56r. Chamla Sahib built the dome of the edifice. The railings reand the two tombs in the building are of percent metal-work of very singular design. The touldings are somewhat looked after by the Mukamusulans of the two, but you are attention is much usualed to ordinary a pairs. The

Mustratum required. tomb and its encrowed go are worldy of silentents in an early examples of Mussalman architect re in Synthern India.

- 51. No. 5, the Palace of the Nomabe of the Cantie.—The palace and gardens at Triching aly [known as the "Dar-ul-Umara"] were built about 1.13. 1660 by Choka Nayakkan, when he removed his espatal from Madura to Trichina-poly.
- 52. The buildings and grounds became the property of the Nawal of the Carnatic; but the extate was bought by Gov rement to 1800, and is now in proceed of conversion into district offices. The more the palace I utilings are utilised and occupied, the better chance will then be of pre-ving them and preventing the falling into complete run. The architecture is of a chance Saracenee kind, to plaster currelments of the Audience Hall being the best features of the tyle.

53. The mesque mear the pulace was built after A.D. 1725, and is architecturally nuremarkable compared with Samernie buildings further north. As an example of the southern style, it is, however, muchy of better enalisty and berping in other.

54. No. 6, the took in which Hickor Heber was drowned .- Neur the house in which the Judge of Trickingorly holds his court is a small open tank in which

Bishop Heler was found dearl on the 3rd April 1820.

bb. In all suggest that a be no tablet put up to mark the spot would be a filling mem rial."

56. No. 7, the Great Temple at Serrangam (son diagram) .- The following il emption of the temple at Surangum is taken from Moon's Macual of the

Trushin andy Histories :-

- "The entire mass of building consists of seven enclosures, in the centre of which is the shrine of the divinity known a liangane I wani. This shrine is surrounded by a wallmensuring #45 feet by 180 feet; the second enclosure is 421 feet by 301 feet; and the third 750 feet by 510 tent. Europeans are not allowed to enter the enclosures. The fourth, in which is the I, min-pallar mandapans, to which the great ided is brought every your at the great festival kn was I sil anta Findari, measures 1,245 feet by Si5 hert. Over the gare at the entran to this enclosure are three gaparains, of which ten is the finest in the whole ten ple. It is known as the "cellai" or white gopman, and as 146 feet if inches in height. There are altogether fifteen gopmans. in the entire group of buildings. Of these there are four in each of the three outer walls and three in the one next in order. There is at present no gate or gopernment on the western sule of this enclosure; but tradition states that there was a gate there furnierly, but that it was his ked up because a number of the inhabitants of the portion of the town near it had entered through it and plundered the page da. The gate over which is the relies goperam loads into a sard to the emth of the 1,000 pillar mandapum, in which the only respectable specimens of stone carving la the temple are to be found. Even these, however, are by no means remarkable, and are not for a moment to be compared with those in the great pageda at Madura. During the unusual festival, which has been already mentioned, this yard is covered by a pendel encual every year at a cost of about Re. 3,000.
- Running round this (fourth) enclosure there is a street in which there are ardinary dwelling houses and slups. The fifth wall measures 1,010 feet by 1,397 freet. Outside is a seminal street, and then a wall of 2,100 feet in length by 1,845 fort in breadth. This wall is surrounded by a third street, and then comes the with and last wall, which measures 2,100 feet by 2,517 feet. This wall is built of two out stone, and is 20 feet 8 meles in height and 0 feet broad at the top."
- 57. Srirangam is over 1 miles from the Trichin poly civil station, and is on an island formed by the Kaveri and Kolerun rivers. The sketch chows the appearmust of the temple enchance and guteways from the top of the unfamilial guteway of gopping to the south. The diagram explains the general disposition of the to ruple buildings; but nothing can be accurately or estisfactorily specified for the measures necessary to their preservation until a

berry regulant regular survey has been minds of the while area. For this purpose I intend sending a party of surveyors. In the meanwhile it may I - useful to note the meet interesting pa to of the temple and what struck me as non-mary at the time for their paper is inserrution.

58. The meanne mache Rs. 60,000 a year, and out of this the rost of remirs such the affected. The unfinished expursion (A) measures 170 frot by 114 feet. The firm gate people are each of a single Ish of grante, 30 feet high and 3 feet

<sup>·</sup> Mr Grant Buff has a local distant to be repaired and endowed by a railing

square. Had the gate been finished it would have rison to a height of about 300 feat. As far as it has got, the design is in excellent taste and well proportioned. Its completion would add enormously to the architectural appearance of Scienceum, and there are many rich native gentlemen who could well afford to bear the cost (see

- The regelation which is discounting the winnery should at all events be sketch). removed, and the earl should be readered a curs against thin 59.
- The next object of interest is the gopuram (at B), which has a paint-1 coiling with the hour incurnation of Vishnu and other subjects. The colours are good, and should be preserved by clemning and covering with a hard transparent yarmlak.
- The mandapain at C) is where the temple jewels are shown to visit ire. Photographs anded of the temple. Some of them no very fine appearment of goldsmith's work, and should be photographed. The 1,000-pillar mandapara (which, I think, is correctly placed at 1) has columns f single blocks of granite, all more or 1 - elaborately eneved, and the while it which covers them aught to be cem red.

12. The linest gapuram is that (at E) called the vellai gopuram. exception of a five repairs, it is in fair condition.

- 63. The Temple of Jambakenheuer at Seie my en (and diagram No. 5),-Al mt If miles from the great temple to Victim is the pageda sacred to Sixa; and although much smaller, it far surpasses the larger building in beauty and architectural dignity. There are many inscriptions on the walls of the temple one dated A.D. 1151-52, which, if correct, unker the editions of much earlier date than supposed by Mr Fergusson. Until the archeology of Southern India has been scientifically investigated, the dates of buildings cannot be fixed with any degree of certainty, and there is nothing save the architectural styles from which to formulate chromological data.
- 64. The Trichinopoly Manual by Moore states that this pageda had an endowment of 64 villages in 1750; last in 1851 an annual money allowance of Re. 9, litt was given in from of the lambs, and this sum is paid every y ar to the Trustees. The hulding is in many place much mined and filthily high; and, as Mr. Moore remarks, " the funds available for its maintenance would be quite sufficient to keep it in good onles if they were devoted to their proper objet, but this, it is needless to state, is not the en c."
- Mr. Fergu n, who visited Serrangum many years ago, write: " On of the great charms of the temple when I vested it was it parity; writher whit . wash nor red nor yellow point had then suffeed it, and the time stain on the warm coloured granite was all that reliaved its monotony; but it suilled, and it was a relief to contemplate it thus after some of the vulgarities I had seen. New all this is altered. Like the pag slas at Rumisscram, and more so the at Medura, barharons yulgarity has done its worst, and the traveller is only too fully justified in the contempt with which he speaks of the works of a great tringle which have fallen into the lands of an h inworthy successors."
- 66. I am not in a position to give an accurate description of the transminaur ner ity to preserve this hubble of and cannot de su until a cuever las le n male te Burney nonemary. detail; but the place might early be deplecen, and the whit wooh she ld be re and from all realpeared mariney. I was much frunk with some of the die got to of the gopurame, which are handown in design; hat these have been gottly a mit by being plater docer. The proper way to preserve wood to to keep it . fean with a p

a dwarer, and to peri lically oil with some vegetable oil and theroughly rub try, to prove at dust from collecting and reking on the autility.

#### Madura.

- 67. Modure on of the most interesting place that I have I we to in India. It production of Dravidian act are more in read how and more grotespoly at the than in any other Southern city that I know of. The great Hando I relates a man of prince-pie gateways and nough; magnificent and grand in grand effect; wholat their true outputs are moved. I for lines and unification. This came fail to be the impression produced on every the time spectator. The tough I idding are, more very not do rust like as many of their class throughout India, but are at all hours through with Brahmius, we hope havers, and there is the most of the lasy religious spectants which rapidly on I one nother at B mires.
- 6s. The activity of Hindrian, both in its religious and artistic a post, it of the fire interest at Madura. A secondary feature of the place is the architectural by a claim place.
- of the civil buildings," writes Mr. Fore m, "are all in what we would all a pint I are had Moorish etyle, in turn to in effect if in always in the between the archive report in and for every purpose." In the tomplethe mach is moved in least up archivertural for the "The distinction between the civil under their in art kept up at Madmin and who is by the Dravidine is very singular linters using to stole. My work in Frequent last was multitumately for two et to percent of different examination of the building; but before making a sure you which to be out table to muon what is for ever even in, it will be of me value to briefly to ord what I did see and what are in my opinion the tours at apple and obvious remedies.
- 73. Mr. St kes, the College, afforded one every facility for visiting the timples and polars, and without his help it would have been dillikult to entitling in the time at my disposal
- 71. The great temple at Maloca (see diagram).—The inversor in A.D. 1310 of Southern India by Malik Kafur caused the overthrow of the original temple, built probably man conturns before Christ.
- 72. The present offices were for the most part built by Trunal Nayakka in the first halt of the sevent century. The enclosure is a nectangle, measuring 80% feet long by 747 feet wide. The diagram gives an idea of the various prisof the building. There are two temples in the centre—one designted to Siva, i.e., called Sundereshwar, and one to "Minakshi." the finh-eyed guidens, the consert of Siva. These sanctuaries are said to date from A.D. 1520, but the more magnificent buildings are of Trimal Nayakka's time.
- 73. The enclosure possess four large goperants or gateways and six of less importance; a beautiful tank called the Potramara-culam (i.e., for the purpose of drawing a teppas or lighted raft in procession round it), surrounded by a hand-some colonisate; and a half of 1,000 pillars with sculptures of singular ment managements elsewhere in India.
- 74. Some of the figures carried against the pillars are not only spirited in action, but of superior remtering. The whitesark now as them should be removed at any cost. Outside the principal enclosure of the temple to the east is the half or mandapum built by Trimal Navakka for the reception of the deity of the Temple (see B). It measures 321 feet long by 79 feet with, and consists of four ranges

of columns, all most claborately sculptured and some with rampant " Volis," ne monsters, and others with human figures (see sketch). Detailed illustrations could be calculte.

The effigy of Trimal Navakka is in the central corridor, with a manpy over it; the figure is brilliantly painted. At one and I the figure is brilliantly painted. At one and I the control corridor is a handsome black is the money. The hall is used as a market, and is very diety and negleted. It should be cleared out, cleaned, whitewest removed from pillues, and the roof of parapet repaired. At the cust and of the hall is a gateway communical by Trimal Nayakka (see A), but never finished; it measures 174 feet by 107 feet, and if completed would have been the most important gaparam in Southern India.

- 75. The great gopman (see sketch and C in diagram), which is the principal entrance to the temple, has an elaborately curved time lase, and a supergraph of masoury and plaster, nine storeys in height, covered with the most into decrease or manuscript and figures.
- 76. The plaster is painted in brilliant colours, but at a distance the gus at tone is neutral, and not by any means inharmonions.
- 77. The entrance to "Minakelii" temple a to the south of this gate, and it elaborately painted fagade of plaster ornamentation and ligare is a most plant copie object, although grotes per in detail. But not the two cuteways is a row of braziers' shops, where brush we also if excellent happened at that.
- 78. The wooden doorways of the great gapter m. C) and of other entrance to the temple are hands in by carried, said the cond-work bloods be present by cleaning and oiling. The two contracts of the triaples (at to mad it have been any of lone hundred by degree for the reception of numerous such
- 79. The carved stome neutral in Similare lewer's temple (at K) are larger tome life and spirited. They e quie because

The wall (L M) at the back of the two temples is covered with a cription

- 89. The colonnade of the tonk (at E) is brilliantly painted, and there are
- S1. Near the numberant is in descriptions.
- 52. The pagede is a ry ealthy; has an eadownest fro liner at the receipt of frequent gifts of great value, from its an abject. He was a spent industry my visit, and the place is a lift and the case of pillace and the case pillace and the case pillace and the fifts op at a paint of the feest of whitemash. Until the resident, a wealth of lifts op at a paint of the resident of the maximum generals will present the determent of the singular of the rid of this a underful pagedu.
- 83. The temple jewels, which are of com brable val , should be that graphed.
- broad, and has a central garden, with a make in the centre and four plicans in the corners. The wall which for an thu tank is much defect by stri, of red and white colour.
- is the Palace of Trimal Nayakka. He came to the throne in A.D. 102, and

reigned thirty-six years, during which time he built the Madara pagoda and polares.

- 56. The diagram will give sume general idea of the armagements of the latter, although it has no pretent one to nominey. The sketch shows the interior courty and its surrounding areados.
- 57. Passing through the port of creeked to found Napier on the cast side, the qualitangle is entered. The pillars which carry the arches are of mas may, and the federal brick arches are of chunam. The wagon left seen in front (see sketch) has been repaired under Mr. Chichelm, and the whole of the buildings are gradually left testored to serve as offices for the Judge and Collector; but unless more capit progress is made, the rained portion of the buildings stand a very fair chance of coming down altogether.
- 88. The height of the mustive columns gives great dignity to the building, and the plaster enrichments, both inside and outside, are very remarkable and effective specimens of their class.
- So. It is difficult to believe that the grotesque and elaborate architecture of the page and the plain and alm at classical treatment of the palmer buildings, are of one period and erected by the same man.
  - 100. Details are wanted of the latter, which are fine examples aboving the infinence of Mountlman are on the indigenous architecture of the South.
- 91. The Tambam.—The "Tambam" is a pulse building of the same period executed for wild beaut fights. It is now transformed into a residence: but the interest which attaches to its original use is sufficient reason for keeping it in substantial repair.

### Tanjore.

- 12. The Great Pageda.—I am indebted to Mr. E. Forster Welster, the Collector, for very valuable aid and assistance during my stay at l'anjore, which coulded me to see in a short time the linit lings here noted on.
- 98. Tanjare is 31 miles from Trichmopoly by the South Indian Railway, and is the head-quarters of the richest Collectuate in Southern India. It became the capital of the Chola Kings, who were powerful in Tanjore, several centuries ago, and a very remarkable tomple was exceed by these rulers.
- 94. "The great temple of Tanjore," writes Dr. Burnell in his pamphlet, "is really the most remarkable of all the temples in the extreme south of India; as one of the oldest; and as it has been preserved with litth alteration, if not perhaps the largest, it is the best specimen of the style of architecture peculiar to India south of Madras. This style arose under the Chola (or Tanjore) Kings in the 11th century A.D., when nearly all the great temples to Siva in Southern India were built, and it continued in use in the 12th and 13th centuries, during which time the great temples to Vishna were exceted. Up to the beginning of the lath century these temples remained almost unchanged; but at that time all Southern India became subject to the Kings of Vijayanagara, and one of these, named Krishnaraya (A.D. 1500-10), rebuilt or added to most of the great buildings of the South. The climic feature of the architecture of this later period is the construction of the coormous goperams which are so conspicuous at Conjeveram,

Chedambram, and Srirangam. All these were built by Krishnarava; they do not form part of the original conth-cast style, but were intended as fortifications to protect the shrines from foreign invaders and certain plunder and description, as the Hindus of the conth-cast first discovered on the Muhammadan invasion of A.D. 1310.

- or To the archeologist the temple and its ritual arc of little interest compared with the inscriptions which cover the walls. A part of those was photographed in 1859 by order of Sir C. Trevelyan and published by the travernment, but with ut result. In 1871 I made out the character, and the whole has been copied, under my direction, by a learned Tamil scholar. Madura Muthar Pillar, whose transcript will shortly be published. Nearly all of these incorptions—there are only two or three of a later date—belong to the reign of Vira Chela, or from A.D. 1964 to 1414.
- "The whole of Imlia, which in the 11th century remained subject to Hindu kings, then became subject to Vira Chola, and he was, layend doubt, the greatest Hindu king known to history. As these inscriptions state, he did not spare the kings he compared; and the enormous planeler which he gained became the chief means of building and endowing the great temples of the South,"
- 95. The services of the great Taujore temple are conducted on a modest scale, since it has lost its large revenues, and it is dependent on the Princes of Tanjore, who provides an annual sum of Rs. 12,000 for maint name and repair.
- 96. The plan of the pageda has greater stateliness and propriety than seen in other Madras buildings of that class, and the appearance of the various ediffice is not marred by being too close together.
- 97. On entering through the two gateways at the entered of the enclosure (see diagram) there is a small temple C) where sacrifices are offered. A great deal of whitewash and paint disfigures the stonework. The great ball Nami, is suid granite, over 12 feet high, is directly in front and covered by a mandajam, the masonry of which has been rudely painted in yell we and red, which is offen ive. Further west is the great Vimana containing the lingum, and its tower, 200 for high, stands out well against the sky (see sketch). The base of the building is covered with inscriptions in the old Tamil of the 11th outery, and one of them records the conquest by Vira Chola of Bengal and Northern India. For just require have been executed to the temple and its great tower, but it stands in account being cleaned of the stripes of paint that damage the plinth.
- 18. To the north-west of the enclosure fat D) is the heartful temple to Subrahmanya (see sketch); the base of the tower is 15 feet square, and the superstructure 55 feet high. The pilaster and pillar treatment of the façules is as good as possible, deserving detailed illustration. East of the tower is a building 50 feet long and a manulapam beyond, 50 feet square. This latter is partitioned up for storing temple furniture, and on the walls are a serious of pointings of the Tanjore Rajas. Or. Burnell considers the landing to be about 350 years old. East of the Subrahmanya shrine is a Chandikasan temple (H), and further a small temple to Durga. In the south-west corner of the enchance is an unimportant temple to Ganesa. The coloursale of the outer wall has 105 lingum and shrines, and the inner walls were in 1575 painted in fresce to represent the various incarnations of Sundercedwar, the form Siva took at Madura.
- 99. I recommend the erudication of all while sold from the buildings, that the rough to kept in substantial require, and that the Blancations wanted.

  Blancations wanted.

  munit Am to the Sul ah ray tempte be clear I out and left as originally designed. Illest cale no of the tempte would be calculate.

- the greater fort, and is a mass of masonry not very different in style from the Madura palace, but commoner and more vulgar. The Durhar hall is a most grotesque rendering of Hindu and Muhammadan architectural features, and, if not beautiful, is a curious example of the civil architecture of the Mahratta rulers, and should be preserved. There is a statue in white marble, by Chantrey, of Sharfeji, the last Raja but one. The court round the hall is decorated with black and white ornament resembling Italian Sgraffito work, and on one side is the library which contains an unique and vulnable collection of Sauscrit manuscripts, of which Dr. Hurnell has made the catalogue. Among them are works on architecture or "shilpishastras," a translation of which would be a most valuable contribution to Indian art.
- 101. The Mahratta hall of the palace was under repair during my visit. The interior is painted brilliantly, and there is some coloured statuary in the upper part, which is well excented, although not in the least taste. Plans and illustrations of the palace buildings would be interesting.

#### Kombakonum.

- 162. Kombakonum is a town in the district of Tunjore and possesses two important Hindu temples. The larger of the two la dedicated to Vishun and the smaller one to Siva; both buildings are in the centre of the town, about a mile from the railway station on the South Indian Railway. There is a third pagoda of less importance.
- 103. Fichus Pagada.—The Vishun temple has a great goparam of 12 storage and 147 feet high, righly ornamented with lumian and animal figures. Near the is a small perchand two press innal curs of carved wood and intrests in a great. One is of great size and elaboration. The calling of the goparam of the Luple is well painted and pleasant in tone. The interior buildings are nothing remarkable. The inner court measure. So feet 6 in hes by 55 feet 8 nothes, and, to be ing offensive oil, 2, is be eating treated otherwise paint, against like the roles of local anthority is the with propriety be ran it.
- 104. See Passels.—The temple to Siva, a field the Kumbheshwara passela is approached by a corridor, 3.30 feet long and the feet wide. Them are shape on toth oil a, and this gall my is the most sing for flature of the place. The principal approach is 128 feet high, and he is to a court 83 feet by 55 feet. This is very distily k pt, and the vimanals bricked up and plasterel. Outside the temple are four wooder care, all more or less and with carving in wood. These eyes are ingular forms of native religious art, and the ravings are very good of their kind. Unfortunately, and in too many in tuning, the beauty of the carving is utterly de trayed by coatings of all, which with dust a agulates and forms a hard and hidsons a uting. A copy of one of the temple care would be a valuable addition to the hada collections at South Ken ingt in

The Runoqual Acesses it to Sastra Color and the sastra color and the sast in the color and the sast is and the sast in the color and sastra and the sastra a

- 105. The Ramaswamy temple has only one gepurem leading into the emboure. The columns of a mandapain here are unserve and well curved. The wall reliefed and dirt diffle the pla.
- 106. The we den guteway of the entrance gapurem is handromely carred a d the only remaining hulf of it is worth preserving by repair, cleaning, and oils g.

#### Chillambaram.

- 107. Pageula.—Chillemburan in South Arcot on the South Indian Railway has a pageda of considerable antiquity and interest.
- 105. It evers an area of 88 areas in the centre of the town, and is the property of a class of Brahmins called Diksh nars. The South Aroot Manual by Mr. Garstin, of the Madras Civil Service, says that in 1875 there were 253 married mombers of the institution who were on duty, twenty at a time, and each but he wave on duty for twenty days until each has performed services at the various shrines. These Dik haars go in turn into the country to collect almost worder over the whole of Southern India. The pagesta present lunded endowments, but in may seems forthe image, and I was told that nearly two lakes of rupees had been promised for repairs. In A.D. 1785 a under its said to have spent two lakes in repairing the gopurnus after the Franch occupation and partial fortification. The pagest has a reputation for great antiquity, some authorities going as far back as the fifth century; but from the style the greater part of the buildings date—from the 15th to the 10th century A.D.
- 100. Thouk toh diagram explains the disposition of the various bailding which are within the enclosure.
- 110. The principal temple to Siva (at A) is nothing very remarkable. The treasury, which is within the enemal enchance, has a me fine wooden corvings and r the caves of the copper roof. The Govindah temple is also here with its mandapum, which, like everything else worth looking at, is whitewashed and therefore defaced.
- 111. At the back wall of the temple is an inscription in Sanscrit. The 1,000 pillar amudapam (at B) has some time and massive monolithic pillars about 2 for square in section and 14 feet high. Some of these are unfinished and some damaged. The roof over the centre have of pillars is vanised and full of bats, the floor below being black with their dung.

112. The temple to Subrahmanya (at C) has the best carvings, and its columnada is most dalaborate. The stone-work is said to have been much mutilated

by Hyder Ali when his troops were in occupation.

113. The large elophants on such side of the entrance steps are carried in a spirited way. The columns of the temple, which are well worth drawing, are partly disfigured by plaster. The interior has a vanited roof. Repairs have to a certain extent been executed, but the courtyard of the temple is still strewn with broken fragments of carred masonry which should be collected and displayed (see sketch).

- 114. The temple of Parvati (at D) has a colounade or porch of hand not pullars, but whitewash spoils the effect of the carvings, and damp has disculated the painted ceilings. The inner temple is much defaced, and full of bute and diet. Cleaving would do great good here, and diet and whitewark et ald be removed. The cont too should be made proof against cain.
- 115. The west gopuram (at E) is architecturally the hest impurant (see sketch). It has an inscribed stone in the entrance. The gapuram to the east

- (at O) is the highest and best preserved. Outside this are five curved wooden cars, for by designed and executed; one is said to have cost Ro. 1,000.
- 111. The north gamman (at H) is the sea med in vice. Fagetation is at work on the lower part, and anglet to be removed and damage stopped.
- 117. The niches in the base nent have figures in black stone well sculptured. The upper part of the structure is of brick and made suincel. Inside the entrance is a fine monolith with inscriptions.

#### Conjeveram.

- 115. Conjeveram is a place of very considerable interest, but not frequently vicited, as there is no accommodation in the town for Europeans. It is on the South Indian Railway between Chingleput and Arkonum, and 45 miles south-west of Madras itself.
- 110. Since Temple.—The largest temple of the town is dedicated to Siva, and the object of warship a lingum selected). It is probably the oldest building in the place; but the ancient history of Conjeveram requires investigation.
- 120. The enclosure pass some large gapurant, several mandapoins and a hall of 1,000 pillars.
- 121. Two handsome perches are in front of the great gapuran—the doorway of which is hands one and hig. Require were going on here during my visit, but the institution is not wealthy, having only about Hs. 2,000 annually from Government and villages. The 1,000-pallar manufapan has all the appearance of antiquity, and its ceilings appear to have been hand smely painted, but the damp coming through the rest has caused obliteration.
- 122. One partian of the hadding is enclosed for the reception of the temple rehicle and is full of buts. Between the vianuals and the great groundle is a very old building covered with inscriptions called the Kachinayavam, and is entirely of stone.
- 123. The pagoda has often suffered through the exigencies of warfare, and has been used in the Carnatic companyes as a barrank, as a fort, and as a la spital.
  - 124. It will be necessary to extertally correspond be children for require; but the for estable whiten which abound with streaks of rel paint might be custoutly removed with great

odcantage.

- 125. Fisher To ple.—The smaller temple dedicated to Vishau is the rishest and most important in titution in Conjecture. It has two encloses, the inner one being closed to Europeans and unbelievers.
- 126. The buildings are about 2 miles from the Tehrihlar's office, and are approached through a street in 1 with the houses of Brahmon connected with the temple. Most of the dwellings have wooden doorways singularly well carved, and the immates show great skill in tracing chalk patterns in front of the temple pate, as well a bafero their own doors. The tracings are renewed every day, and the patterns are varied and drawn in fron hand.
- 127. The first gapman is severe in outline and is not plastered over with figures of Hindu mythology. It has a number of theory time. Beyond is the 190-pillar mandapan, which is a fine group of masoury sculptures (see sketch). Some were damaged by what in Hoder Ali's time, but the bases of all the columns are conted with whitewash and paint, which utterly hides the delicacy of the carving.

The whitewash should be removed and the roof made quite secure against rois. At the corner of the caves are chains wrought out of the solid stone.

- 128. There is a second mandapam north of this; also a Teppo-bules or tank. The vinumb itself has some fine masonry sculptures; none but findus are allowed inside. The gopuram to the cast is a fine pile with a few figures on it.
- 129. The temple jewels are shown near the vicannah to visitors, and are very interesting specimens of goldsmith's art. The total value of the jewels as estimated by the priests is Rs. 1.00,935; among those is a necklace valued at Rs. 3.652 given by Lord Clive. There are some fine solid gold head ornaments for the Photograph's wanted of temple jewels witch. The jewels should all be photographed. Outside the temple is a very fine carned sounder processional car, also worth photographing.

130. The income of the institution consists of a revenue from lands of Ra 3,000, and an annual Government payment in lieu of resumed fees of Ra. 9,901.

- 181. It will be necessary to exceptly entropy this pageds both for repairs and for its interesting architecture and ornaments; but survey measury.

  Survey measury.

  a great dout of preliminary good may be don by cleaning, repairing leaky roofs, and removal of whitemanh.
- 132. Jains Temple.—About 2 miles south of Conjoversm in the hamlet of Timperath Kundram is a Jains temple, in which service is still a adocted, although in a humble way. The Vijayanagar Kings made grants of land to this temple during the 14th to 16th conturies, as may be seen from the inscriptions; but the Jains see is now reduced to 25% in the whole of the Chingleput district. The temple hallfing

Survey required.

Should be carefully surveyed, as they have all the apparance of having been originally Buddlest, and possess artistic beauty of their own. The outline of the buildings bear some resemblance to the Rathus at Mahavallipur (Seven Pagodas) (see diagram).

Bijanagar and Hampi.

133. Bijunagar Rains.—The distance from Bellary (on the Madras Railway) to Bijunagar is 34 miles, and the road is a more truck across a rough country. The travellers' rest-house at Kamalapur is an old temple which has been converted for the purposes.

184. The foundation of the Bijanagar monarchy dates from the middle of the 14th century. The city was built on the right or southern bank of the river Tangabhadra in a plain partly open to the east and west, but to the north-east is unded by a wild and fautactic group of rocks and hills rising to a considerable height, the northern faces of which are almost inaccessible, and which left only a confined space between them and the river. The encionis of the fortifications covered scarcely less than ten aquare miles.\*

185. The plan of the ruined city is taken from one published in Mondown
Taylor and Fergusson's book; but a more detailed survey should be made in order to determine what monuments are worth preserving and what measures are passible.

136. My visit was made in March last, and Mr. Huntley Gordon, the C lector of Bellary, very courtenally accompanied me over the ruine and facilitated my inspection of the principal buildings. The buildings are noted on in the order in which we visited them.

<sup>.</sup> See Architecture to Charme and Myseer by Readows Taylor and Perguent .- John Marray, 100.

137. Elephant stalder (I) on the plan).—These consist of a long row of chamber of over, the centre one having a double storey over it. The architecture is of the unixed Bindu and Muhammadan style, and in this building is less objectionable than in other hubbings of the same style at Bijamgar. The masonry is much ruin I, and or spece and vegetation should be removed from the roof. The interior about the cleened out, and the building placed is charge of acustod, an to present money and damage.

#### Bijanagar.

- 135. Feduce Buildings.—Near the clophant stables and to the west is an emberor with a high masonry wall. The buildings are of a form which are of the influence predicted by Midammudan power and magnificance on the minds of the Hudus, laducing them to capy in their palaces—never in their temple—the mare splendid form of palatial architecture.
- 139. The use of the moslem arch in the central partition is clumsy and heavy, but the platter enrichments somewhat redeem the general effect, and are worthy of illustration. The all of creds and or regreeth would do much go il here, and the place should be to entry.
- 140. Temple of Fiel by (see C on plan).—About \$00 yards to the south-we t of the pulses buildings is a temple in a quadrangle, 110 feet from north to a uth at 1200 feet from east to we. The bas-reliefs on the exterior of the walls are singularly characteristic, and he saw f has a clephants, camela, a ddiers, spirited dancing women, &c., may he had to the name given to the building. The advenue of the interior is supported a four most classication waved black baselise columns, and the examinants, which is a district, are both ball and rich. On the plinth of one of the gateways is an inscription in old Kamar. The walls of the enclosure are covered with enlytered characterists and sharply-cut modalinus and figure out of the photographing.

  The wall is at all proceed a factors of an inferior in the course of many eq., by classing a pand watching.
- 111. The The ne (see B on plan) —This consists of a succession of platforms, the outer scalls of which are carred in relief with displants, camels, dancing guis. It is about 600 yards south of the pal buildings. The total height of the platform is 31 feet, and there are signs on it summit of a pavilion having sixt. In ide this mound is a staircare which is partly blocked up. It goes by the n m of "Mahavim Dibba" or "Da a Dibba." About 150 yards to the south— tof this is the building and tank known a this
- 142. Queens' Bath (1900 A on the plan and betch).—It is 75 feet 5 inches quare in plan, with a serv it in the centre of feet 0 inches equare and 6 feet disp. The certile of the building has unarchad coiling rightly carved with foliated comment in plaster, and over the 1th on the of the four unless is a projecting window with three openings. The plast cand the may be much damaged; but if the coof is re-deced caterproof, the building will be a good deal preserved from further damage and rais.
- 113. Malare to Rogan thewari Temple (see E on plan).—This is about 11 mil u. theoret of the travellers' in t-house, and stands in a wallest enclosure on a rich bill. There are three gopulums of the senal Bravilian style of architecture. A mainly min 1- is the bet architectural feature of the place, and is very picturages with its carried massury columns. It is roofed over with enormous stone beams, and the roy require the same carrier that he carried massury is

a great man of dibers which charid be removed in order to clear the pitalh. All regulation should be removed from the roof and the interior of a sed up. One of the temples in the enclosure has a scatted figure, probably Jain. The Duke of Buckingham has recorded some was directions for the preservation of this temple. He again has note on Hampi:—

- 144. "This course should be adopted also at the Malavanta Ragonathawami To 1. We the enricuming wall give great facility for its present in. We subjectly pulletime as the new event interfered with, but those practice which are no part of regions of a new event by which irreparable injury is done, whealthe rigidly interfered and the inheritation of the principal injurity of the control of the subject of the s
- 145. "On the third morning I again rising the Malayania Ragarationami Pagado as Mahayanai Dibba, at which latter I arranged to large to the h 1 sublish far the decorated walls of the of man to expect the whole of the care ingo for the photon, phar
- 140. "I also visited the Patachin Rama-want Pageda. It has been defined and the removed, but is a barge at 1 accordance with good around and fine from the continuants with a double too of grant defined into make with a double too of grant defined, the fire grant for the continuants of the fire grant for the removing the reduce of which is not to the fire and the country around a refuge of grant and satisficient appropriate in the continuants. The fire and the property of the damaging off the other cooking rate."
- 147. Temple of Fittals (see I' on plan and diagram).—Speaking of this, Mr. Fergumon writes:—
- "Be for the insect example of the Bravilian etric in this province at the porch of the unfamiliar brighted at at Ripmagas. In some respective as seen at the porch of the unfamiliar boundary that I are seen that the seen as any the I is Southern India, though for I are used than the at Ram are some or and Call in Southern India, though for I are the unfamiliar in the latter than the seen portion the roof belong compared of some the k from which the control belong to the set to prove the I in site. The are, too, of the policy of the state of the s
- "With regard in the details of the door come to be only to 14, but that if local tradiconvert, which actable the tark of this people to Achur May, the man publy to the Mammel during his beauty I put f
- "This would place it between the years 1530) and 1540, which from other circumstance to be extremely probable as its date."
- 118. The three temples stand in an encle use which he four low gaparame a stone rath or carele to the temple on the right as you enter the encles ire, and two stone pavillons for lodging travellers or absteb).
- 140. The principal temple is much rained—one y by Tippe Sulpi—a dits present condition is much critical. The standard principal of the rest of the rest rendered eccure; that I think that any actual restriction would be deficult in a country. In gle the left area from the web to a week and a left with the macenery. The area from the boulding thould be freen of can all to be well seen, and the care as pleathe of the building thould be freen of can all diries.

- 150. Speaking of the Vittalaswami Pagoda, the Duke of Buckingham, who vaited Hampi hat year, records the following:-
- 151. "Victalarment Pagola tractf is a mervel of industry in carving, and beautiful both in till a and detail, although the carving is not as a whole worked to the finished surface of the numbliths f Madurs or Vell re. The delicary of the columns in their several groups surpasses any work I hav ret seen (see sketch). It is much to be lamented that this graceful structure has been so much injured, and that so large a period has fallen. The injuries appear to me mainly due to make and to pitgrims. The former have in many cases undermined the last munts, and the later by lighting first force oking against the pitlars have assess the granite to flake, and this probability is preserved until tile pitlars have become too fruit for the support of the are granite in pasts and also of the roof. I think that moustures should be taken to preserve times rails of a bygone age from further damage, and that the Collector should be authorised to play a personner us other competent man at a small anlary to prevent fires being lit within this tempic, or any digging for treasure or stone within the preserved of the tempic, or the stalling of extra in it, and should take measures at the large annual gatherings to prevent injury."
- 152. The pageda at Hampi (see G on the plan)—Is approached through the Pilgrines or Kashin Bazar. Excepting during festivals, these dwellings are described; but they form an improssive example of street architecture, and are worthy of illustration.
- 153. The temple has but one enclosure and two gateways. The design is attributed to one of the Bijanagar Rajas, Krishna Rai, who in the 15th century returned from the conquest of the Chola Rajas of Conjeveram and built the edilice out of the besty which he brought back. The lateral gopuram to the north is a fine pile, and was repaired by Mr. Robertson, when Collector of Bellary, at a cost of Rs. 46,000. The door to the vimanals has some handsome brass-work with hammered ornament, worthy of illustration.
- 153. Jain Temples. Above the pageda on the slope of the hill are some pouliar temples of the Jaina style, and they should be clouned out and kept in encludy.
- 155. These meanmendations are preliminary only; and as I have mid, a detailed survey should be made, so that more comprehensive measures may be specified for the consideration of Government.

# Note on Works undertaken in Madras, dated 18th September 1882.

Madura.—As already mentioned (see page 5, paragraph 37), Lord Napier liret suggested the restoration of Trimal Nay-yaka's Palace at Madura, and its utilization for publication 1869 had charge of the work which is now approaching completion. The tal estimate is Rs. 1,50,000. Mr. Chishelm is about to put his drawings of the palace in a shape suitable for publication, and I hope before long to have them reproduced.

Vellore.—The idea of restoring the beautiful temple in the Vellure Fortwar initiated in 1878 by His Grace the Duke of Backingham, and has been carried out most successfully by Captain McNeil Campbell, R.E., at a cost of about Rs. 3,400.

Seven Pagodas.—The seven pagodas at Mahavallipur, decribed in my report of the 23rd June 1881, have received a certain amount of attention, an estimate for Re. 1,100 having received the manction of the late Mr. Adam on the 12th April 1881. More, however, remains to be done.

Amravati Tope.—These most interesting remains, which have been described at length in Mr. Forgusson's work on "Tree and Serpent" wership, and by Mr. Sewell in his "Report on the Amravati Tope" published in 1884, are situated 18 miles up the Kistna river from Bezwada. Excayations were undertaken by Mr. Sewell in 1877, when 80 hitherto undiscovered marbles were haid bare. Subsequently the Duke of Buckingham visited Amravati, and in 1880 ordered the complete excavation of the place. Since then Dr. Harge has been to the tope, and in January 1882 packed up all the excavated marbles, he just to remove them to Madras. I am now about to inspect the locality with the view of preserving these valuable remains in situ, if possible.

Undavilli Cave Temple.—This cave temple, which is in the Kistma district, was chared by Mr. Sewell in 1877 of the accumulated debris of agos.

Old Monuments and Temples in the Fort at Gingi.—In 1872-73 a sum of Rs. 500 was spent in removing broshwood, enting down trees from the walls and reals of the buildings, and extracting roots. In 1874-75 an annual grant of Rs. 200 was sanctioned for the preservation of the ruins. In 1878 a special grant of R. 200 was sanctioned for improving the access to the hill on which the fort stands.

In 1880 Mr. Chisholm, the Consulting Architect to the Madras Government, submitted a report on the Gingi remains, and wished to remove some of the pillars of a temple to be utilised in building the Madras Post and Telegraph Offices, but Government declined to cancilou the removal of any of the architectural remains.

Bijanagar.—These fine remains, known as the "Hampi mins," are described in my Report of 25rd June 18ol.

In 1878 a small sum was authorised for the removal of banyan trees which were destroying the buildings. After inspection in 1850 the Duke of Bucking lam called for estimates for protecting the temples, and in May 1881 a grant of Rs, 200 was made for clearing away encrowching vegetation.

The Governor of Madras, Mr. Grant Duff, visited Hampi in July last, and untercomprehensive measures are now about to be undertaken to repair the various structures.

Surveys have been made during December to July 1882 of Surrangam, Madura, and Ramisseram. The plans and photographs now in course of reproduction show what, I think, is required to preserve the buildings surrounding the great temples at those places.

#### P

# Report on Monuments in Bombay, together with a Note on Works undertaken.

#### Bijapur.

General description of Bijopur and present a udition of its buildings, together with some recommendations for their preservation, and Report on the project for making the vily the head-quarters of the Kaladgi District, duted 17th June 1881.

The journey to Bijapur from the Oreat Indian Peninsula Railway at Sholapur is muther easy nor comfortable. The road is but a made track, and there are no bridges over the librar and Sina rivers. A two-wheeled cart or "bandy" is under favorable arrangements drawn by trotting bullocks, and these go at a maximum rate of tunies at hour; but allowing for delays in changing at the various stages, for accidents, and for the occasional exemption of a wilful pair of animals, cart and all, into the middle of a field, the journey of 61 mdes is accomplished in 20 hours. Fortunately, for the future of Bijapur, and for the comfort of those who have to go there, the railway from Sholapur is, I understand, new sanctioned, and the embankments were completed as a redict work during the famine of 1570-77.

2. The name "Bijapur" is said to be derived from "Vijyapur" or "City of Victory," which was a Hindu centre of some size and importance when the Mulanumalan invasions of the Dekhan brought a band of fanatics, who attacked the Brahmins of the City College (the remains of which may be still seen in the citalel), and stablished thouselves in it. This early occupation of the city had, as far as it is known, no immediate effect on the place, nor did it produce charges. It was not until Yusuf Adil Khan in A.D. 1446 a until independence that the site of the old like in town was selected for the new citadel and the surrounding fortifications are built. The former is over a nule in current series, and has a stone parapet and ditch. The latter consist of massive majory wills and lastions, the circuit being about 01 miles.

The plan of Bijapur, attached to this report, is taken from that published in Taylor and Fergussian's volume, and shows the patition of the most important minimum that buildings. The second plan is annexed more as a curiosity than anything else. It was copied from an old map by a native of Bijapur, who accompanied no round the city, and it gives a not also of the character of the existing edifices and where they are, in and outside the city walls. The sketches are from Colonel Biggs' photographs: and I am indebted to Sic Charles Macgingor, Ouarter Master General, and Captain Bell for the permission given for the reprediction of the plates at the Office of the Intelligence Branch, Army Head Quarters.

For some distance all round, the country consists of undulating downs, covered with a stony soil. In the hollows between these downs are lands of a richer quality, and with a plentiful water-supply. Near Bijapur itself the surrounding plain, which is the actual watershed of the general Dokhan platem, is probably not less than 2,000 feet above the sea. The granud is and and stony, and there is nothing to meet the eye except occasional change of trees about the villages. Although the immediate vicinity is not well cultivated or productive, the rivers

Rhims and Krishuz enrich the land on their banks, and produce long tracts which in former days lilled the granaries of Bijapur.

- 3. The buildings at Bijapur form the subject of a large volume published by John Murray in 1860, under the editorship of Mr. T. C. Hupe, C.S.; and this, together with what Mr. James Fergusson has since written on the subject in his History of Is lies and Eistern Architecture, make this famous expital unusually fortunate in the mode and extent in which it has been illustrated and described. The photographs and photographed drawings in the former volume are, however, not all that can be desired. The photographs are not printed by any permanent process, and have faded: the same may be said of the photographed drawings; but, in additum to this, the drawings do not come out well. They are so much reduced as in many of the illustrations of painted decountion of more than half their value. If these drawings by Captain Hart and Mr. Cumming are available, they should be repraduced in the best possible manner for publication in single plates, and mod rately priced, and would then be of great value from an architectural and arrived point of view.
  - 4. Yusuf Khan, to whom the dynasty of the Adil Shahis owes its form lation, was of Turkish descent, being a younger out the Anomath, Sultan of Constantinople, who died in A.D. 1451.

Forced to escape from his home at his father's death, he eventually found himself in India; was purchased for the body-guard at Heler; and subsequently raised himself to independence at Bijapur.

Besides the erection of the citadel and surrounding city walls, the Adil Shah's began their architectural career by utilising the Hindu remains of a temple for the construction of a mosque.

This system was, however, abandoned, and Ali Adil Shah in A.D. 1357 established a new building epoch.

Indued, probably, with a taste for the Byzantine architecture of Constantinople, he avoided the use of Huntu forms or Hindu details, and developed a style popularly local. Unlike the Indian Sameanic architecture of Jampur and Ahmedaland, which was adapted and horrowed from the styles of the Hindus, the Rijapur architects introduced a domical style of great grand or and holdness, more in architects introduced a domical style of great grand or and holdness, more in grandeur of effect which the larger Rijapur buildings possess is not easily realist, except on the spot. Photographs and drawings explain the construction and form of the great dome which covers the tamb of Buhammad; but it is in its presence along that one becomes equible of the simple grandeur of that wonderful piles and Major Mant, R.E., has left on record his impression that the building is of no architectural interest; but I feel convinced that when he goes to Rijapur and stamb before it, he will reverse his opinion.

A complete chapter in the history of Eurera art may be read unade the giganic walls of the city, and a set of great national importance and of lasting credit t

<sup>\*</sup> Architecture at Hijapure, an ancient Muhammadan capital in the Runtay Presidency, platecomplet from drawings by Capitali P. D. Hart, R.E., A. Chumdag, C.E., and Native draftsmen, and He be open by Colonel Higgs, late of the Boyal Artillery, and the late Major Lock, Bombay Army.

the Bellish Government will be accomplished as soon as the buildings are egalematically eased for and kept from falling into ruin and oblivion.

5. Tomb of Sultan Mahmad Adil Shah, otherwise called the Gol Gumbar (marked W on the plan).—The manadeum of Mahmad Adil Shah is one of the material translation in India, and its dome is one of the largest massary structures in the world (see sketch). The building was exceed by Mahmad (A.I). 1826 to 1860), but was never quite completed. Besides its remarkable size, its mothest of construction claims the study and attention of both engineers and architects. The thrust of the enormous domical mass is counteracted by the compression given to the ring of the massary from which the arching starts. This compression is produced by the weight of an enormous cornice formed out of pendentives acting inwards. On the platform of these pendentives the dome communes with a diameter of 123 feet, thus leaving a space of 13 feet width all round the interior, which forms a very perfect whispering gallery.

The exterior diameter of the dome is 142 feet 8 inches, and the exterior height from ground 198 feet.

The illustrations in Taylor and Fergusson's Bijapur are three wood-cuts of plans one photographic view, and seven photographic plates of drawings.

Repairs to this tomb were executed when Sir Bartle Frere was Resident at Sattara, and have been lately carried on afresh by Messra. R. B. Joyner and C. Remboll, Executive Engineers, successively in charge of the Kaladgi Division.

Repairs which were urgently needed to the dome some short time ago have, through the energy particularly of Mr. Joyner, placed the building in security.

Much more remains to complete must have been began. The rows of large brackets which foem the nuble overice over 80 feet high nu each of the four exterior vides of the building are much mutilated and fullen, and no amount of money expended on this grand building will be of any availing credit to the British Government until the fallen brackets are explaced. The replacing them at the height of 80 feet is no aritume, but not insuperable, task. I would recommend that a thoroughly strong and secure scaffold be constructed for one of the four sides of the building, and so made as to be available for the other three sides.

Instead of strongthening the corbels, as proposed by Mr. Joyner in his Estimate No. 4 of 1880, with unsightly iron strute and bolts, the whole massary should be relatif. This will naturally cutail additional cost; but I most strongly resummend this course as being the only natisfactory one.

Inside the tomb and to the north is an unfinished open-like addition intended as a resting-place for Mahmud's mother. Its rootless state is a source of damage in the rains, and temporary covering would be of great advantage until more permanent measures can be afford I or malured.

Within the enclosures of Malimud's tomh a number of natives have erected unsightly dwellings. These should be removed, and the whole creat elected up.

The adjoining manue to the west is a building of interest which should be preserved. During the famine of 1876-77 part of the interior was enclosed for an irrigation office, and I bearned, during my visit in March 1881, that it is proposed to convert it into a traveller's hungalow—s proceeding which I consider vanishings and disfigueers, and which I strongly advise may be counteredeced. The margue thould be cleared of all the enclosing walls and left as originally built and designed.

the took and marque and water-khana should, when the repairs are finithed, on handed over to the charge of the district officials, and proper and responsible native

enstedious placed in charge to keep the buildings in order. The nalling round there buildings aught to be completed.

u. The Jama Mariid (marked V on the plan).—This fine manque was built by Ali Adil Shuh between A.D. 1557 and 1550 (see skotch).

The illustrations in Taylor and Verguscon's Bijapur are cround plan (wood-cut), two photographic views, and eleven photographs of drawings. The landling was put in require the British annexed Sattum. Other repairs latterly found necessary have been carried out, but the ciructure musts out ful eatering to proce to damage by regetation, or by rain leaking through the dimer of rufe.

The interior is decorated with hands of beautiful tile-work round the arche of the domes, and has a noble "mehral," which was decorated in coloured and gill freeco arube sque of the most gorgania character by Mahmad Adil Shah. Freeze means should be taken to prove this aple did decorate a by a reful cleaning where and by caraciding. There recome good untique praye corpets (durrie) left in the mangue, which should be carefully kept and the patterns out of for re-

7. Milluri Mahal (marked R on the plan).—The legend of his gateway and me que to a "aweeper" or "mille" of Ibrahim Adil Shah I's reign is not confirm I by local to intion I was told by a native, whose family has been long located at Rijajor, that he term "millur," as applied to the building, signifies "prince "—ne "awaper." The Chiefs of Chitral are still entitled "millur"; and it ama much trees probable that this legatiful building, a place of Mulamunadan worship, was dedicated to a prince rather than to a man of low caste.

The illustrations in Taylor and Fergusson's Hijapar considents plan (wood-out) of the gateway, a photograph showing the gateway and me prepared ten plategraphs of drawings and details of the gateway by Captain Hart. Mr. Cumming, and the two native assistants. The musury of both me passed gateway is exceedingly well executed, and the skilful use of concrete blocks in the except tion of floors is an admirable example of how that material is empals of bein complyed.

The ornamental details of the gateway are exquisitely wrought in stone, and afford the most perfect examples of the stone-cutter's art, whilst the wooden doorways are finely curved in bold design.

The bullding, in all respects a little genn, is under 30 feet square in plan, has three storeys, and the flanking minarcts are little over 65 feet in height (see alactel).

The perforated stone railing or bulustrade round the top of the gate g is damaged, and should be reacted. The trackets and chajins of the projecting with an order broken, and require resturation. The equire and preservation of the orquance of gate way should be still the and thoroughly carried at, and the two being it gives noted to be jealenedly guarded and careet for by responsible custodians.

"arkilla" there are a quantity of Hindu columns which belowed to a temple, and have been recently uncarthed. Note these is a mesque converted out of Hindu pillars and other materials of a Hundu temple, and in the enclosure of the mosque is a rude memor, beneath which are the bodies of the Muhammadans who were killed in capturing Brigans and remarks come of the columns in the calculate of the mosque are of a binck stone, and remarkable for their angular design and clabouring culpture. These Hindu remains about the preserved and not utilized. Preceding

further into the citadel the Messa Masjid is reached—built in Ymuf All Shah's time,—a small square building surrounded by a colounade. The masonry work of the central building is beautifully out and had, and the "melumb" of the masonry bands mely carved in stone. This banding sheald to be place repair.

The other buildings in the citatal are mostly in a ruinous condition. They were largely constructed of a ocal, the removal of which by the Mahrattas canced the collapse of so many walls and flows. An exception to these is—

The Askar Mokel (No. 12 in plan).—This is a very singular lailding, with large wooden columns supporting the frunt vermulah.

In Taylor and Forgussin's Hijapur it is illustrated by a ground plan (woodent), one photographic view, and aix photographed plates of drawings, sections details, &c.

Owing to its use as a sucred estifice for relies of the Proplet Muhammad," it estaped destruction by the Mahmita-, and give a go d idea of the character of the places that were rained elsewing in the citabel and today of all their wood-work. The palace measures in plan 13% feet by 190 feet, and he two storys, in front of which is the verandah with large columns of wood over 33 feet high. The principal apartments are in the upper story: they are decreted with coloured frescoss on the walls, with beautifully perced wooden screen litted to windows, and with doorways inland with ivery. All of these are much neglected, and deserve a belt r fale. It frescoss could be cleaned and protected by a laced carnich, and the arangment wood-work of pierced and intend work in all be chillfully repaired and corefully oiled. In one spartment are kept some carpets and hangings of State purposes. The worknowning, colouring, and pattern of some of these are first rate and in true oriental tyle, but they are builty varied for and full of dust. If they are to be preserved, it is absolutely are mary that they be repaired and broked lith strong cloth we en man to pretent them falling to pieces, and be a agained melts where they can be a not to pretent them falling to pieces.

The remnants of the Adil Shahi library were preserved in the Ashar Mahal, but some years ago were removed by Sir Barile Frere.

Considerable repairs are required to this building, which now has a destate und a glected appearance. Some managery arches were had up by Captain Hart to export a 1 strengthen the roof of the reconstant, but the a are very unsightly, and a more skilful means of repairing the weakened roof could be employed by reacting tember 1.

The Annul Mahal, Palace of Delight, has some fine concrete floors, and was neighbly decorated with handsome coloured tile-work. It is proposed to convert this building into the Executive Engineer's residence. The gateway leading to the Israel Mahal has some aplendid interior plaster-work sorthy of preservation and illustration, and should not be occapied.

The Tout of Faref Juck built by Inhmail Adil Shah (see the sketch) should also be preserved and not or upied.

Garas Mahal. Arash Muhal. Adalat-ka-Mahal. Chinch Mahal.—The Cagun Mahal is very ruined, but has a grand arraway. Justines were absolute elegal, and the place cleared of dibris. The Arash Mahal is intended for the residence of the Civil Surgeon; the Adalat-ka-Mahal as the residence of the Collector and

Magistrate; and the so-called Chini Mahal or Granary as the offices for the district.

Alarogic Padehab's Morque. Poni Mahal. Son ri Mahal. Sath Khundi Mah l. Marsall. Chinch Hali Maryal.—Beside there are the Mangir Padeha's Morque, the Pani Mahal, the Someri Mahal, the conspica no Sath Khundi Mahal, built by Mahanud Adil Shah, and the Chinch Didi Ma jid,—all of which should be cleared of debrie and decay arraled, as far as possible, by the extraction of roots and creepers, and by filing in crusts on maxonry with a near, a as to mitigate the damage which heavy rain is trable to cause. Debrie should be collected in concernent heaves and creepers planted so us to trail over them.

9. The Great Gun Malik.i. Maulan (A.D. 1518).—This highly finished gigantic howitzer is of mixed matal (4 copper, 4 tin), and lies on the outer walls of the city. Its extreme length is 11'S", and its greatest diameter at the muzzle 5° 2" (see sketch).

It was at one time proposed to remove this fine specimen of ancient casting to England, but fortunately the bul reals put a stop to any such memoure. Irec mound that the gue be proposed manufact on the hastion where it now rests.

10. The Taj Basei (A D. 1636—1600).—This is a fine tank of water, measuring 223 feet by 219 feet, marked J on the plan, and has a figure facing the street, must an archivery of 35 feet span flanked by minarcle over 50 feet high. Two wood-cuts—elevation and plan, a other with one photographic view, and two photographs of drawings—are in Taylor and Pergu in a book on Rijajur.

The fuçule of the building was never completed, and it will much compress the general appears on to finish it.

11. The Breaking Ress (A.D. 1626—1679).—Thus is about half a mile from the walls of Dijapur and to the couth-cast. The Ress of garden is an enclosure, in which are the temb of Breaking Add Shah II and his bandly, and the adjacent mosque. An inscription resords that the buildings took over 36 years to complete; that 6,533 workman were employed on them: and that the cost amounted to a sime equivalent to more than half a million paulos sterling.

Both the tomb and mosque are very perfectly executed and finished, and the best preserved of all the Bijapur momentute. They are illustrated in Taylor and forgus on a volume by a ground plan weed-cut), by two photographs, and by ten photographs from drawings mude by Captain Hurt, Mr. A. Cumming, and two photographs from drawings mude by Captain Hurt, Mr. A. Cumming, and two native draftsman. The photographs are, however, much faded, and the drawings do not appear either distinctly or to advantage.

The tomb of Ibrahim is remarkable for the manner in which the interior, 10 feet square, is that-rested in concrete faced with stone; also for the vary rich ornament which has been lavi had on various parts of the edifice.

There are all tombs in the interior, which is a perfectly plan apartm of with me ornament save what appears in the claborate atoms trullis-work and trains of the windows. The groundrie devices interwoven with Arabae interiptions produce the windows. The groundrie devices interwoven with Arabae interiptions produce very remarkably rich lattice; but it is in parts much broken, and storid, y possible, be reserved.

The outer walk of the four entrances are righly ornamented, and the weather alone with carvings and gift motal kushe present a bold and handsone appearance.

The central apartment is surrounded with a double verandah; the inner verandah has most rich and minute carvings on its columns and ceilings. The

exterior surfaces of the main walls were once covered with claborately painted and gift arabeques now much faded.

A skilful renewal of this surface descration would greatly enhance the beauty of the temb; he it must be done by an expect.

The criticize of the verandalis want making source, and one of the arches of the outer row of columns is cracked, and should be strengthened. Whitewash on policies should be removed by application of strong sods and water and scrubbing off with hard lambon brushes and paintle knives. All encodes work in doors and windows requires preserving by cleaning and oiling. The outside chajige and brackets must ceneral and expure.

The mosque has a fine colourede, arched and demed over with great skill and tast ful in greatity. The whole of the interior and much of the exterior has been white we had. The interior walls and arches have been lined and picked out with grey t windst undermeath lies a profusion of coloured decorations. The building to be send of a me exterior repair to chaffar, brackets, roof, corniers, &c.

The reden requires putting in order, and the enalted chambers of the four walls which seless it, and there is the lower part of the terroce which support the wyn and to b, should be cleared out. The whole place must be in proper custing to a damage and pollution (see electe).

17. Project for converting Bijapur into the Head Quarters Station of the Kol is Destrot.—During my visit in March last, I had the advantage of my U. Mr. Reinhold, Executive Engineer of Kaladgi, who lives at Bijapur, and he accompanied me over the several buildings in the citadel which it is proposed to convert into office and residences for the district officials.

The question of making Bijapur the head-quarters of the district was raised in 1870 by Calouel (now Lieutemant-General) II St. Chur Wilkins, R.E., then Separatending Engineer. Writing to the Bomb y Government on the 31st II miles 1870 from Bijapur, he calls attention to the approaching visit of the Governor, and requests that his letter may be laid before him; paints out that Bijapur is centrally situated in the Kaladgi District; has no valy may a over the station of Kaladgi, which he describes us an obscure village. Kaladgi in former days a station of that conthern portion of the district which held; god to the Madras Presidency, and when Bijapur pertained to the independent State of Sattarn. Kaladgi described as unsambly proceded with public and prints buthlings;—as being very inaccessible; of no political unpertance; climate very but; visited every few years by cholern; has no cald senson; as being degree-ing to Europeans, with a bad water-supply.

On the other hand, he describes Bijapur as admirably adapted for a head-quarters station; points out that by its adaption money might be gived, since the extenditure are any at Kahadgi would produce larger results at Bijapur. Bijapur and inhabits I by a million people. The fort, over six miles in extrumference, it follows westerly sea by 200 in the hot weather; is not subject to chale as It inhabitants speak well of the climate. The water-supply good. He as a point out that the resultation of Bijapur as capital of the district would be an act of policies whether; that ample accommodation exists for police and troops; that if Bijapur is made the capital, the most valuable of the public buildings and measurements would have a chance of permanent preservation.

Colonel St. Clair Wilkins, again addressing the Bombay Government on 23rd February 1870, enters into the details of the scheme, and points out that the civil officers of the district hold it to be for the public benefit. Rijapar free from cholera since 1872; is saturated on the elevated watershed between the Bhima and Krishna rivers. Kaladgi in a depressed basin. Population of Kaladgi 6,591. Population of Bijapar 12,935. Estimated cost of completing buildings mecessary to Kaladgi, Rs. 1,01,000. Estimated cost to convert buildings at Bijapar Ba 97,000. Suggests that Mr. Molecy, C.E., take up his head-quarters at Bijapar and carry out the alterations.

- 13. Mr. G. T. Molecy, F.R.I.B.A., C.E., was accordingly appeared Executive Engineer of the Kaladgi district, and submitted a series of estimates and plans for converting the following buildings at Bijapur:—
  - (1) Granary of Chini Mahal into offices for the Collector and Judge.
  - (2) The Semi into jail.
  - (3) The highlinto Police lines.
  - (1) Yusuf Adil Shah's Masjid, &c., into Executive Engineer's office.
  - (5) The Adalat Mahal into a residence for the Collector.
  - (6) The Dowlia Ykut Mahal into a residence for the 1st Assistant Collect r.
  - (7) The so-called Chini Muhal into a residence for the Superintendent of Police.
  - (8) The Annual Mahal into a residence for the Executive Engineer.
  - (9) The Arash Mahal lute a residence for the Civil Surgeon.

The last of these estimates is dated 18th September 1870.

- 14. The Bombay Government issued an order, No. 1862 of 1876, on the 4th Orders by the Bombay Government.

  November 1876, conctioning the Bijapur print, but want of family presented now allotment is inguinade. The matter was, however, ordered not to be lost eight of.
- 15. Mr. Molecy's plans and estimates were forwarded to me by the Secretary to Government, Public Works Department, Bambay, on the 7th April 1811, for my equilon and report on the proposed modification of the several buildings at Bijapur.

I have gone carefully over these plans and estimates, and now beg to submit

10. Mr. Molecy's estimate, No. 8 of 1870-77, for the conversion of the Granary conversion of the Granary into effect, offices, Rs. 20,000.

There is, I think, no objection. This building known as the Granary or Chisi M had was created by Henlam, grandson of Yusuf, founder of the Add Shain Dynasty, A.D. 1524—18. It is in the citalel or arkilla (No. 7 on the plan), and has a ground and upper floor, and measures 275 feet in length, and forms our end of a quadrangle 365 feet × 216 feet.

Arended recesses extend all round the quadrangle.

The greater part of the building is taken up by a large demed half  $125 \times 20$  feet 10 inches, and rises to the full height of the building. The wings project in

either flank, and were connected by a huge verandah, supported at one time by two worden columns. Only the masoury bases of these now remain, and all the wood-work have been removed by the Majurattur.

Some grain, pieces of sulphur, broken glass, and China porcelain were found in the delicie and in the staircases, which were bricked up in the thickness of the massive walls. These and other discoveries, such as the gun found by Mr. Joyner, abound be carefully preserved.

Coloured tiles were formerly used to decorate parts of the building. The west wing is assigned to the judicial branch, and the east wing to the revenue branch.

The body of the building is given over to various offices and to an entrance; record-rooms, cells, &c., are placed in the quadrangle.

Part of the Granary appears in photograph III, Taylor and Fergusson's book.

The great hall should not be disfigured by high partitions, and should be kept free from end to end. Screens would sufficiently divide up the space for offices. The great versualsh should be rebuilt.

There is nothing to show in the plane what the new partions will be like in clevation, or what description of doors and windows will be provided. The style of Difapur architecture should be adhered to throughout, and this may be done even in the most shaple way.

The versulah in front of the cells and Judge's room is not in keeping : the areading of the original building should be repeated.

17. Mr. Molecy's estimate, No. 85 of 1876-77, for converting the Serai into Convertion of the Serai mass jail. a jail, Rs. 29,000.

There is, I think, no objection to this, but there are only general ground plans with the e-timate, and, excepting some elevations of a new workshed and warder's quarters, there is nothing to show what the huldings will be like.

The serai is 11 miles north-west of Bijapur, and is not illustrated in Taylor and Forgusson's book.

It would be in letter keeping, and probably economical, to use nothing but mason arching instead of timber and tiled roofs.

18. Mr. Molecy's estimate, No. 21 of 1870-77, for converting the Idgah into Conversion of the Idgah into Police lines, Ro. 24,040.

The Idgah is shown on the plan. It was erroted by Aurangzib in A.D. 1690. Almost the whole of the buildings proposed are new, and only the enclosing wall is to be utilised in the crection of the men's quarters. It would seem, therefore, better to leave the Idgah for the use of Muhammadans, and baild the lines on some uneccapied ground.

19. Mr. Molecy's estimate, No. 75 of 1876-77, for converting the existing Gooversion of the memper of Adia Shah, Ar, int the Executive Engineer's Office, Re. 3,000.

These buildings are described as the mesque of Yusuf Adil Shah, &c., but no plan accompanied the estimate, although one is referred to.

20. Mr. Molecy's plans for converting the Adalat Mahal into a residence for the Collector. Rough estimate, Rs. 15,000.

This building is of Ali Adil Simb II, and dates A.D. 1652. Its position in shown in the plan No. 4. All the wood-work has been removed.

There should be no pitched tiled roofing, but terrace roofing throughout. There is nothing in the design to show the character of the door and window openings.

21. Mr. Molecy's plans for converting the Dowlia Ykut Mahal into a Convertible of the flowing Ykut Walson of the flowing Ykut Walson to the Assistant Collector. Rough residence.

I think there is no objection to this; the building is not shown on the plan in Taylor and Fergussan's book.

The Dowlin Ykut marque and gateway are shown at T on the plan and in photographs XLV and XLVI in Taylor and Fergusson's book. I presume it is not intended to touch there is any way.

The plan for converting the Dowlin Ykut Mahal seems to me witable,

Conversion of the Chini Matal into a Police Superintendent of Police, Re. 8,589.

This building is not shown on the plan in Taylor and Fergusson's book. I think there is no objection to its use.

There are no elevations of the house with the estimate to judge from.

23. Mr. Molecy's estimate, No. 74 of 1876-77, for converting the Anand Converting of the Anand Mahal Into Mahal into a residence for the Executive Engineer. Engineer, Rr. 4,000.

I think there is no objection to this building being used. The Annul Mahal was built in A.D. 1551 in the citadel (see No. 3 on the plan).

The plans do not show what the prop sed alterations will be in appearance.

24. Mr. Mohey's plan for adapting the Arash Mahal as a residence for the Arash Mahal into for the Civil Surgeon. Hough estimate, Ranaresidence for the Surgeon. 10,000,

I think there is no objection to this. The building is 50 yards to the cust of the Adalat Mahal (No. 4) in the citabel.

The plans do not indicate what appearance the building will have when altered.

25. I renture to suggest that the preliminary work for a wrecting the vicinity mentioned becomes and actional delay. If the plans before in had been of sufficient detail. I would have made a deign of how I think any one of the haddings should be treated; but if the Executive Engineer, Hijapar, will send me elevations and details of how the buildings would look after the alterations as proposed are carried out, I will, if no very, make any suggestions for keeping the architecture in harmony with that of Hijapar, and furnous drawings for the parpose. This report is preliminary only, as more buildings than those monitored remain to be inspected and reported on. For this purpose, and to obtain further illustrations of Hijapar architecture and art, I hope before long to repeat my vint.

## Report on Ahmedabad, Poona, Karli, Ambernath, and Elephanta. dated 26th October 1881.

My visit to Alimedated, 15th to 21st March last, nabled me to see many of the architectural remains of that very interesting and wonderful city. The opining of the Rajputarian the south; and the immediate and first tanking of the improved continuous and the city. Already one monque (Min Khan Chistis, built A. D. 1465) is used as a mediance; and signs are not wanting elsewhere of the readings, on the part of both Nations and Europeans, to utilise ancient architectural memorials for dam tie purposes (see aketch No. 1).

2. I salant that the most complete and proper case should be taken of the Nove ty for uncertaint. Almostated monuments. The city is distinctly one of the most purpose and artistic in the whole of the Bombay Presidency, and the minder of visitars is now greatly increased. Some of the old tombe and me pure have received repairs and attention, but the number of these that are maltreated is a deployable condition organity calling for systematic a medical.

Almostated architecture of Abinedabad was inaugurated by Abinedabad and Almostated architecture.

State in A.D. 1411, and, as cisewhere throughout India the Mah unmadans began by building: on a finaterial taken from Hindu temple. The peculiarity of Abinedabad architecture is, however, that the Hindu masons who built the later mosques and tembe adhered closely to indigen us forms instead of to these convectoristic if the me lane, preducing buildings with a larger admixture of Hindu or Jaina der if than is seen in other capitals founded by the followers of the Prophet. Added to this, the plane prescribed by the Muhammadams for their buildings impart I to the etyle a locality of conception not generally displayed in Hindu architecture, and a singular elegance and character thus appear I in the structures the running of which his sentered in the city and the neighbourhest.

4. Mr. James Forgusson, in his History of Indian and Fastern Architecture.

lia devoted a whole chapter to the architecture of Guzerat, of which Alimedalad, for the last 450 years, has been the capital; and a volume, profusely illustrated by photographs by Colonel Biggs, R.A. and with historical and descriptive sketches by Mr. T.C. Hope, and architectural notes by Mr. Forgusson, was published in 1566. The plan of Alimedalad and its environs is taken from the latter work.

5. Mr. Burgers, Arch I sign! Surveyor in Bombay, visited Ahmodaled in October 1871 and reported on, transcribed and translated me of the inscriptions on the buildings (see Archaelogical Survey of Western India—Kathiawad and Kachh, 1876).

of strength and in 1412, and were in 1486 and strength and and regained by Mahamad Begarra as to make Almedakad one of the best decaded sities in India. In the seventeenth contary the walls were noticed with winder and praise by almost all European travallers. During the discussion of the early part of the eighteenth century they fell into considerable decay, and in 1755 the mine were so heavy that in several places great gaps were created. In the same year Mamin Khan put them in requir. But later on, in 1750, they were, near the Khan Jahan Gate, breached by the British. After this gradually became

no ruinous that earts and carriages could pass through, and the city was as unsufas the subside, robberies and nurders being common. In the early years of Bruins management (1818-1825) complaints of the bad state of the walls were constant. In 1825 the Collector wrote—"The city is on all sides open to this we and robbers;" and in 1828 the circuit Judge drow attention to the state of the walls, urging that some of the city revenues should be set apart for their repair, but forcing that it was too late for any sufficient remedy. Shortly after this, chiefly by the exertions of Mr. H. Borradaile, the Collector, much public interest was taken in the restoration of the walls; a tax on charified butter was lavied, and in 1882, as a cost of £25,000, they were thoroughly repaired." If Alimedaland is as alive to its interests now as it was under the guidance of Mr. Borradaile, the whole pleasand to the place I is a complete state of preservation, and every architectural monument would have its responsible guardian.

- 7. The following accounts of buildings and recommendations for resadual measures are in the order in which my visits were made:—
- 8. Sidi Syad's Mosque in the "Bhaddar" (marked No. 1 on plan)—This very beautiful building to at the north-east corner of the Bladdar, and was built by Sidi Syad, a slave of Ahmed Shah (A.D. 1411). The Mahrattas descerated it and it is now used as a mandatdar's kacheri, for which purpose the front openings have been bricked up, the inner columns whitewashed, and the beautiful unchla windows of perforated tracery (see sketch No. 7) filled from inside with place. The roof consists of a series of small domes beautifully and fancifully corbile 1.
- O. The clearing and cleaning of its disfigurements and impedements are a remedies chief I strongly recommend to Government; but, to place the building in a suitable condition, an office will have to be provided for the manufacture.
- 10. Ahmed Shuh's Mosque in the "Bhaddar" [A.D. 1414] (marked No. 12 on the plan).—This is constructed out of Hindu columns put together with an irregularity similar to that observable at the Kutub Mosque man Delhi and at the mosques at Mundo in Malwa.
- 11. The interior is moded in by a series of domes of the Jaina type, and a one side (to the right facing the west), enclosed by state traveries, is a ruled floor, evidently intended for the ladies of the palace. The sectors in the centre of the west wall of the mesque has an inscription above it. On the right is a marble palacit. The whole of the interior is very dirty. Some of the domes show signs of leakage; to remedy this, they want repose outside, and regulation should be remeded. In front of the building is a grave mound, where repose the bedies of those who were killed in the fight against the Hindus. The measure is no target us a , and should at least be in cartedy and kept vican.
- 12. The Tin Darwass (marked No. 8 on plan).—This is a fine gateway in the city, and used to be an entrance to an ench are in form! If the Bhaddar Gate. In 1877 some repairs were executed, as I a hideous s of removed from the appearance.
- 13. The Jama Marjid (marked No. 1 on plan) —This is an anel are numenring about 100 feet by 250 feet, the un que at the west end being about 2() f thy 00 feet. It is a handsome building (see sketch No. 2); but the minasets flanking the central arch were overturned by an earthquake in 1810.

The interport is particularly striking with its relounable of fine pillars, zenama gallery with tractry, and minuscouldons of the Jain type.

- It. The makes is of match, very effectively intaid with stone, and has a match in cription above it (ditail till January 1421 A.D.). There is an upper all even and the intral portion of the integral, which give height and grandom to the figure the building. Unfortunately all the tone columns and walls have been whitever incl. The materials is the left convert. The tank in the centre of the converted of the mosque has been very an unably record over with corrugated in it.
- 19. 11 I State To b [reprint of D. 1337—35] (marked No. 5 on plan).—This building, to the est of the Jama Musjel, it a massive edifics with a dome, and it wind with I trainer, the cream need which it particularly effective and hand once. The set of large which is ested to the distance of the set of the control of the co
- State to be the ed Sallo We quarked No. 6 on plant.—Near Ahmel State to be to detect one when a utilize the grave and tambs of the Bat. It could the earlier which ame 8 or 10 feet above the ground, it a accounting a domaile errored from the certail by stone tracery of grant vin's and abbout in In the course which is open to the sky, there are several to a formation, I am itself wrought in commental bates of suprince and the comment to Murkhi Bibs, a favorante wife, has an inlay of black marble and in the of-pourt. These are to utiful works of art, the oughly appropriate to their by t, and should be completely contored.
- 17. A great deal of damage is done to the elector, its marble terrace, and to the tember by to-and creepers: whilst shall of murble have in many instances out they dipla d. The dole of the decrease yetation about the continuous of the place of the decrease and great quality valle, the start which is not do work good to this comprhable to ild ag. There should not have a title place kept clean.
- 13. Dood r Khad's Margar [A. D. Cices, Man (marked No. 7 on pl. n).—Mat and Begurra's miniter, Dustuc Khao, initiar markably elegant mesque in the othern question of the city and percondid it with a all made of picture supports all imperiors of me, and inclosed by perforated to the city. The work is very turied and believed by perforated to the city. The work is very turied and believed by a but unfortunately some one has a mark property with the wild the force of the first of the place of the first of the converted in and transfer event to be testimate, variety with massery. The furthing should be intended.
- to. Ran Siper's Magas and Manaleum of side. No. 31 (nurked No. 8 on plant—The monomials of the wife of Ahmed Shah' son stand in the and near the A linguists of the city, and were built in A D 12 H—1520. Both buildings are of cular degrated, and delicately wraught with environment perforated on the work, the monomial in a new or feet by 20 feet, and has two flanking manarets, 50 feet but he cally taped and enriched with architectural measures. A pair of ited ket wind at the end facing the street gives a picturesque apparance the extense, and are as good example of this class to be found anywhere in

In fin. The three wo broke much the building are of white muche, damily are of, and are worthy of illustration in detail as one openiness of this particular kind of much management and the control of t

Illustrations much l. at evel- user properly it is even of a the action of even in the rees. The Runi's tomb is an obviated square building with us instrument down, and surrounded by a low versuals, with a splentially in all plints and closed with true zy. Fe sting a like time and repair and kept in progressibly.

- 20. Shah Alam (marked No. 0 on plan).—The Pir Shah Ahmi, in of Kuth-nh-Alam, the saint of Bhutwa, was latted in A D 1470 in a hand, no tenth 3 miles from Ahmi labad. After his increment the place a quited of the edilice, and was carled by a high wall. The timb is quarter plan, surmounted by a dome, and enclosed by a velocity with beautiful to a trell a-work. The central sportment, in which rest the new 1 temb, is arround it by a second row of errors, and the temb is correctly by a we less enough exquired in the method of the dome is head enough exquired for so, and the floor is of markle. A markle fent or low server encired it camply. The outer viriandals has an entrance of each of it that he, it twith challing theory of orn mentally-placed for plate. At one enter the tenth are latted the children of Shah Alam. Greet variety and factor are displayed as the patterns of the stone and marble serson-work which on it the outer of the hand the inner that. This building is now to fair order, come brights of the laying been last over on it by Mr. It realists, C.S., It to Collecter of Ahmi had.
- 21. Man. of Alm Ala at Stat Ali on No. 0 on plan .— to mhire and the halling in the State Alim each use, but it plan the that of the first use. The macro of grove compared din a regulation to impletely authority of the budget will a join the tree.
- 22. Shid Alan M 7 (see No. 9 on plan).—The me put has the Seminarcia of either extremely of the façade. The interior has a bounded there rows of ix pillars roof before with their and covers. The massery is unfortunately disligated by a layer of whitewark. And a confinement, and the place is a level of the master time by numerous examples in the dom.
- Ahmedahad to the south-next of the city is this fine to very lower in the manuary step for a creatingnesse of a mile, and with paythons and a handsome supply ship. In the cuty is a mall garden and break it come to have many causeway. The plantage of cetter may for and to progress or order.
- 21. Said Moste's Margo and T & marked So. II to plan,—To ruined tomb and till more ruined morphe of Said Eus's are buildled we of the first proceed from further the as. The activery and numerot are if the remain creat of the most further then do not property to us not the sore's as the stone community read, which is example of the Abund bud style. The tends is openful by natives, and promise a discrete bud posture of distrand we decomplete place should be clear to all cleared, and to the soft the beild large ought to very worl. The date of the gediness is not known for certain, but they belong probably to the reign of Mahmud Reguire.
- 25. Heilas Khau's It sque (marked No. 18 on plan).—This is an in the of the way in which the materials of discentral Limin shrines were utility

for the purposes of the Muhammadan. The interior columnde has pillar shift of varieties of Hindu ornament, raised one above the other to suit the plan on which the unwild was designed. Built at the time that Ahmedahad was first established, it is not only a muniment of historic value, but shows how the local style developed itself architecturally.

26. deam Khan's Palace (marked No. 13 on plan).—Axam Khan in A.D. 1036 caused this building to be greated; subsequently was used as a college; but in 1520 underwant conversion by our Government into a jail, and up to the present time carpets, duris, cloths and basket-work are manufactured by prisoners. The entrance gateway has a lumbsome dome with ingenious and effective cuspings. Below the dome is an underground clamber or taikhana approached by four staircases. This apartment served as a retreat during hot weather, and has in its centre a fountain, around which the innextee of the palace set or slept in cool seclusion. The conversion of the palace buildings into a jail has destroyed their design and character; but the place is interpreted.

es ily restored in drawings.

27. Sicklej (marked No. 14 on plan).—Across the Sabarmati river, and about 5 miles south-west of Alumedabad, is the village of Sirkhej, to which the friend and counsellor of Almod Shah, Ganj Buksh, retired to, and died in A.D. 1445. A tomb and mosque were here erceted by Kutub Shah in A.D. 1451, and Mahmud Begurra made the locality a resort, built the large tank and palace, and creeted a mansoleum for himself and his queen Raj Bai.

esting, and its architectural appearance could be

- 25. Timb and Mosque of Ganj Baket at Sirkhej (son No. 14 im plan). The timb of the mint, said to be larguest of its kind in Guzerat, is about 130 feet equare in plan; the central apartment is surmounted by a flat dome, and the cerandal covwould with a series of smaller ones. Round the temb itself is a sereen of ernangatally-pierced brace, and the entrance is descrated with messics of coloured glass and miner work (" shish"). The exterior of the vermedale is cutivaly tilled with winthows of perforated atone, and the floor of the vermidals is of marble slubs. The masoury of the whole of the building is literally smothered with whitewash, and unless the cem at of this barbacous disfig rement a he accorded for, the building it never be even to advantage, or be containly level to be from all the total benefits hands one pavilion of lafty pillers sarmounted by unn small semi-circular domes. The yand I who whitewas hel Ganj Buksh's tomb gave this also a good coating, and to compared of all not be lost night of when merciful remedies are undertaken at Sickhei. The in reque con ists of a d med coloniade, measuring about 200 feet by an feet, with a courtvard surrounded by a varandah to the cost, measuring about 20) feet agrars. The pillars in the masque itself are lafty and handsome, and the with effect of the building would be stately and pleasing if the Inevitable whitewash had not been liberally applied. It courses the clauses of the revaulah round the court and the cultimas of the building of the or operateelf, and should be taken off. A han I me pulpit, the king's seat, and the marble mehrab alorn the interior; but the raised gallery for the ladies of the pulsee has been leated of its screen-work.
- on plan) —There buildings overlook the large tank at Sirkhej, and are divided by a pirch which is now disfigured by whitewash and like point. The tomb of Malmont Begures is a domed building surrounded with windows of stone trellis-work. It contains his tumbstone and those of his sins, all of which are very handsome and of white marble. The floor of the building is of black and white marble, but no are it is a first and the sins and the sins and the sins and white marble.

elsewhere, is manipatent, reader the place unattractive in spate of its good design and senamental details.

- 30. The Twat of Hili Raj Rai at Sirki j (see No. 11 on plan). This contains three tombstones handsomely carved, but the building is neither so la panner so well decorated as that of Mahmud; and, as far as I could as ertain, the interior columns and screen-work are of plaster.
- 31. The Sieckey Tank (No. 14 on plan).—The walls of the various buildings require careful examination, and the names as excepts and prelife register a seried appear between the joints of the massary should be afterly destroyed. The purch in the southern colonnade of the mosque of Ganj Buksh is particularly threatened with destructive overgrowth, and its great beauty demands that so simple a matter as the cutting out of roots should be undertaken without delay. The ruins of the palace, waste weir of the tank and supply shales require periods attention of the same kind; but there is a small magne on the materia side of the tank which is bricked up, neglected, and should be cleaned out.
- 32. The Tank of Azam Khan and Momm Khan (see No. 14a on plan.—This is a brick building on the road between Ahmedabud and Sirkhej, and is said to contain the remains of the two architects of Sirkhoj. Its pecularity lies in its great massiveness resembling the sloping bustioned architectate of Tugkhugkabad man Delhi.
- 33. Synd Usean's Tomb and Mosque [see sketch No. 4] (see No. 16 on plan).—On the opposite bank of the river Sabarmati, and about a mile from Abusedisad, see the mesque and touch of Synd Usean, which Mahamad Begurra built in A.D. 1460. The beautiful touch building, although now so disgrae fully anglested and multreated, played a part when the subject of Indian architecture excited interest in Europe at the time of the Paris Exhibition of 1867; and the illustrations in Mr. Hope's Abusedabad Book afforded to the British Commissioner suggestions for a building which had for exhibition purposes to be extremely open and arry.
- 34. It was mainly due to the attention given at this Exhibition by the Science and Art Department to the subjects of Indian architecture (by more of various illustrations and partly by photographs collected by Mr. Fergusson) that public interest awakened to the importance of collecting information on the subject. In fact, in 1808, at the instance of the Science and Art Department, a representation was made by the British Government to the Government of India to conserve and, tenority the most remarkable of the ancient monuments throughout the whole country. Later on sanction was obtained to survey parties for Bengal, Malrae Bombay and the North-Western Provinces, which ultimately led to the appointment of Archaeological Surveyors under the Government of India and under the Governments of Madras and Hombay.
- 35. The tomb is 50 feet square, and the mode by which the central dome is apported on columns gives a picture equal to the interior, and remiers the design all puber the most successful of all those to be seen in Ahmedabad. The interiors of 1 the the large central and four smaller domes over the sides of the building are beautifully enamented after the Jaina style, and are well worthy of illustration by drawing or photography. The columns are of a simple Hindu pattern, and their number and peculiar arrangement would give the interior an effect of proposity and dignity if the building was treated with any respect.
- 36. The adjoining mosque is remarkable for its minarets which, although of more than ordinary simplicity for Ahmedabad, are graceful in outline and effects by commented. Both mosque and tomb were during my late visit sactosed by a head

to in the land, and had anclosed a cruser of the building with mud calls. Consider the building with mud calls. Consider the building with mud calls. Consider and an apposite corner surrounded with dung, stone as diet. Piles of public files up the space area to tomber vegetation and destroying the roofs of both money and to be. The mutible medical of the I sweet as well as its morble flower had been too. The obtained where he places was a occur of general devolution than I can obe. The obtained remoderant to citur the place of cultical e, a title and jungle, and to the the money cuts in proper custody, and to require the rape which we lead a leadly. When this is due, the buildings should be feuced cound with a simple our railing to keep off cultle.

- 47. Synd allow's Marque (see No. 16 on plan).—In the north-west quarter of the city stands the mospes of Synd Alam. Built in Almed Shah's time, it is an early, although plain, example of how the style developed itself. Its plan and proportions are good, and all the columns and various parts of the etructure were made expressly for it, and not taken out of a Hindu temple and adapted. The landling was during my visit under repair by the Public Works Department.
- 35. The Stateper Mosque (see No. 17 on plan).—This mappe is in the north of the city, and although small and unfinished, in one of the most orante buildings in Ahmedalad. It was failt in A.D. 1505, but the time to were now remupleted. The tracery in their hower parts are most beautifully designed and executed. The fremage has a range of pointed arches, over which is an upper story encircling the dame. The elector is partly relaterated, and the building is distribly kept, whilst the roof is covered with vegetation. All this with property be concluded.
- 30. The Achat Bil. Morgae (see No. 18 on plan).—About a mile to the north of Ahmedabad is the temb and enclosure of the wife of one of Ahmed Shah's Wazirs. The inhuards which ones ad med the autrances to the ground and the great archway of the me que have been minut, wholly in the first case, and partly in the second, by the carthquake of 1810.

The façule of the edifice is hundrome, the curving of the lower peris of the minuret being me t appropriately and claborately ornamented. To colors the hills is outdential great cost, but to clear the of det and debrie, and to accest fire a distribute to the estate of det and debrie, and to accest fire a distribute to the name of a distributed the estate of being a net med, and for which the accesses are not all a be estated. The buildings about the is autobaly.

- 40. Darga Khan's Tout (see No. 10 on plan).—This simple and massively constructed building dat—from A.D. 1455, and is may the Achut Bibi's massively its dome is the large of Guerral, and entirely of brock. The walls and vermulable are of the same material; but awing probably to the same earthquake that brought at at the rain of the Achut mosque, the vermulable arches are hally cracked. The taken of the building is space is and before and a campined toulestone occupies centre. The plane, which is very distances cleaning, and should be in
- 11. Min Kh a Chirli's Mosque ( o No. 20 on plan).—This ornate building, created in A.D. 1465, is near the Salaranti river, north of the city. Like A ar buildings of its also at Ahmedalach, it has two handsome minare to flanking a utral arch. The callway the isls have convented it into a residence.
- 22 The Shahi Bogh ( No. 21 im plan).—About a mile and a quarter a rib of Ahmedabad, and on the banks of the river, is the Shahi Bagh, or Boral Garden, built in 1622 by Shah Jahan, then Viceroy of Ahmedabad,

tu order to give work during a famine. Manufelale describes the Shahi Barb is being in 1038 very large, shut in by a great wall with ditales full of water, a beautiful house and very rich rooms.

In 1666 Theremot found the king's garden full of trees and the resort of the young people of the city. The pulses building is now used as a residence by the Assistant Judge. The flood of 1875 destroyed the garden bods.

- 49. The Queen's M space in Mirrapher (see No. 22 on plan).—Near the travellers' bungalaw on the read to the Belhi gate is the Queen's mesque, built probably A.D. 1430—1440. The building is 105 feet long, 44 feet bread, and 32 feet high. It takes its names from two ladies of Ahmed Shah's household who e tombs are clay. One, Rupavati, was by birth a Hindu. The minarcts, although broken by the earthquake in 1810, are the chief beauty of the mosque. Their beauty exceedingly chaborate and full of the most graceful foliated erminent. The tunb is a good looking building, and has been repaired by the Public Works Department. The central and four flanking domes are supported on columns, the whole being open on all four side. The insides of the domes are rightly frested. The mosque is still under repair; but the work is the implete, and the stone exercises would be in a 1 pr. A by cl. in g. The center and chain is a compliment ornament, and appears to the no brate of a west wall of the interior as well as In the minarcts. When the re-cover co-field the two buildings should be in custody.
- 14. The Shah Khub-ki-Marjid.—This is a small building in the city near the main street, and close to a highly curved and picture-sine wooden pigeon of (so sketch No. 6). There are four ranges of sight columns, the fact de being flanked by two thin minarchs. The rais leaks body in the of; the re-instrumely, and the place should be cared for.
- 43. Know Shall's Maryee,—This building is in the city on the mad to and near the Delhi gate. It nearly escaped mutilath a because the municipality want I to straighten the read! It was built by Know-din in A.D. 1100, and he a facult of 5 arches, the central flunked, as total, by minorals which have been channily repaired. The melitab inside is of white much well sculptured, the top houng intaid with colored marble. The margue is used for storing below of a low in the tomb close by—a proceeding which eaght to be of ped, and a proceeding which eaght to be of ped, and a proceeding which eaght to be of ped, and a proceeding chick eaght to be of ped, and a proceeding which eaght to be of ped, and a proceeding chick eaght to be of ped.
- Muhafiz Khan's mosque is in the moth division of the city, and was built in 14 5. It has three ranges of arches thack if by minants of greet leanty in design and sculpture. The nicks are edged with carry I work, and above cach arch is a small brack t window. The interior pill is support two demas, which are highly currehed. There is a gallery above filled with alaborate tracing. The pulpe and fire metrals are elaborately carred, and the whole building is second to in us in banuty. Repairs are being accused by the Public Works Department, and where our level the building of all only be accessible through a proper and response controlling.
- 47. Dulo Harir's Well (marked No. 26 on plan) —At at a mile north of Alumedabad in Duda Harir's well, built in A. D. 1485 by a budy of the household of Mahmud Begurra. At the ground level it is 196 feet long and to wile. It is a singularly beautiful architectural work, and the account less of

The structure consists of flights of stops and galleries descending to the water. The are ornamented with columns and niches highly carved, and the effect of the vista from one and to the other of the Baori is most picturesque. The place is now much neglected. The well itself mante cleaning as the water gets fouled, and regulation should be removed from the manancy walls.

- 15. Minarcts of a Morque at the Railway Station (marked No. 27 on plan).—
  These minarcts are the tallest in Ahmedabad, but all traces of the mosque and of
  its history are for the time lost; the lower parts of the towers are damaged, and the
  regain of them by the railway authorities would be a graceful act.
- 49. I was unable to see the following buildings, but hope to visit Ahmed-

The town is full of highly carved woeden house fronts, small temples, pigeon houses and the like, which for variety and picturesque beauty cannot be surpassed by the best specimens of moden architecture in Normandy and Cheshire (see sketch No. 6). I renture to suggest that estimates for the various restorations and repairs here recomme ded be called far, and that a requisite unrober of enstedious be appointed to take charge of the buildings specified.

51. Rock-cut Temple were Gaussi Klind, Peaus (see diagram).—On the read to the Gancol Khimi and a little to the west is a curious temple to Shiva. Mr. Fergusson says of it:—

\*\*One were illustration must repelled what we have at present to say of Himin rock-out temples. It is found near Pouns and is very little known, though must more appropriate to eave are in the temple tree than most examples of its class. The temple itself is a pillared hall with apparently too pillare in frunt, and probably had originally a structural Sikra built up the upper plateon to much the position of the semethary. The most original part of it is the Nandi pavillen, which smads in the countrard in front of the imple. It is circular in plan, and it roof, which is a great slab of rick, is supported by apparently exteen square pillars of very simple form. —(See page 447 of Hielers of Indian and Rusteen Architecture)

The illustration in Forgus on's book give an unpression of much greater until than is actually the case, and being thus prepared, I at first found some difficulty in identifying the place.

The circular mandapam is of solulatone, but four columns have fallen Thresident Brahmins called the temples "Panch Pandunki Dewal." The talen stonework could be reset at a moderate coal.

- 52. Temple of Parvati, Possa.—Picturesquely situated on a hill south of the city of Possa is the temple of Parvati, built by the Poshwa Balaji Ilaji Ilao in A.D 1749. As an example of architecture of the date the building is not without into a t, and should ultimately find a place among illustrations of Indian architecture. It has an endowment of Ra. 1,500, and seems to be in fair order.
- 53. Karli Cares (see sketch) .- Karli is a small railway station on the way from Poons to Khandala. The caves are on a hill about two miles north of the station. Full description is given in Cauc Temple of India by Fergu in and Burgess. The ascent to the grant care is very steep, and cases fill feet above the plain. At the foot of the hill is a small village called Villagrang-meaning probably the "village of the Vibaras," and thus bearing collateral testimmy to the Buddhist origin of the cave. It is generally agreed that the age of the Karli Cave is anteredent to the Christian ora. It is the largest Chartra easy in India, its interior dimensions being 124 feet 3 inche lang by to feet t inch a place with of the centre sish is 25 feet 7 inches [see diagram taken from Forgumen's History of Indian and Eastern dechitert ort. The wonder the of the roof r main entire, and the circular screen of wood filling up a portion of the groot arch in front has been replaced fover A). The columns of the contraint to have of herate capitals, and the walls of the vestibule at A D are decorated with insechol of figure a ject . The temple to the gradiens Blan in at the enterior (C) has a hidron roll of hact-iron. The horse-sho arch at I had be bricked up and fit I with an meightly doorframe and dear, whereas a simple iron har gute would answer the purpose letter and not interfero with appearances.

The Buddher? Dayobs under the tem, le ut B has been coloured by the Hindus, who worship it as a lingua; but they have no busines in the place, and english presented from using all to white make the cooling and empty ere. The light of all enough gives in the case around all he etc. Whit with and paint in the concerd, and that to be delined over a contain. The rock above the Bhaw at temple at C is created, and the damp come piece of mild to remove. A pipal to which has struck root at the same place, should to be emplicated. The world that and Bedes are near hard, the former 2 miles south of Karli, and the later of unless east of Bhaja.

51. Ambaruath .- Four and a last miles from Kalynu junction on the Great Indian Penin als Railway is the temple of Amhacanth in a pretty valley on the odge of the river Wadhwan. The Couple, Mr. Burg . says, dates from A D. 1000, and is an interesting example of Hindumehits turn. Although in a rainor b state, it is still of great beauty. Casts and drawings were made in 1505 by the Superintendent of the School of Art, Il mlay; and far no illustration is cone thed, all that is me iry he been done, provided the ille texti me or still armidde. The temple is dedicated to Shive, and is wholly of it no it measure 874 fact from each to west and 68 fat from morth to south. The one turn is rached by the and the rest over it has fallen in. The by of the tempt, i.e., the ad tum, is very line; the clumn are obligatly alptured, and the contraction falls roof is mas we. The sel makes of the oils. tim are coved and the little between columns are in many places dan ereasty he kon. There are porches on the morth, and and a stailer, all very clab in e u de ign and execution. The exterior of the temple is an rich in ornament on the interior. The popul trees in the v of the vid be on't al. An em Lung wall will the formerly surrounded the building; now only part remains, and the nelo 1 species

to we with varyout stone fragment. Then she is the collected as as to be seen, a tele while is less a. The inteller of the temple of all be on the secure the comment of the temple of all be on the secure the content of the collection of the collection.

The cares of Flephents.—The cares are in the charge of Lieutenant W. W. Rebin on R.E., Executive Engineer of the Bombay Defences, who accompanied no them in March lat. His producessor, Captain Haydon, R.E., obtained the new sorry concerns for a resident or today, who keeps then clean and receives the fee paul by visitors. The place is consequently better cared for than any of its class in India. Mr. Burgess, Archivelogical Surveyor of Bombay, has published an account of the cares, which are therefore well known and frequently visited. The free paid by visitors more than cover the expense of care and custody.

# Note on Works undertaken in the Bombay Presidency, dated 14th September 1882.

1. I find from a Minute on the restoration of ancient huildings by Mr. J. Gills, dated Bombay. September 1578, that in 1856 Government, at the ammendation of Sir Bartle Frere, sanctioned a proposal of Mr. Gibbs, when Assistant Commissioner in Sind, for the reprise of the Jame Masjid at Take and tunds on the Makii hill, and contributed Rs. 5,000 towards the former, which was applemented by the Syads who had charge of the at que with a unitar sum, and Rs. 2,500 towards the latter. In 1667 a sum of Rs. 5,000 for the Shah Alum Roza and Rs. 5,000 for the buildings at Sirkhej, Ahmedalast, was sanctioned. In 1860 and 1670 Rs. 3,000 were san at and towards the require of the palace, harem and tank at Sirkhej, and in 1871 and 1573 upwards of Rs. 2,000 were expended on the R za of Rani Sipri on the Astoria read, Ahmedaland.

2. The late Major Mant, E.K., was appointed Conservator of the Arch elocical and Architectural Remains in the Bembay Providen y on the 7th September 1878,

and in July 1870 inspected and reported on the buildings at Aluma Island.

3. My reports on Bijapar, Ahmedalad, Karli, Ambernath, and Elephanta were submitted in a year to the Benday Government.

The convenien of the Bijapar city into a head-quarter for the Kaladyi detrict promise to be our of the most important of measures in the scheme for preserving national menuments. The estimate for the whole project does not inch be special repairs to the architectural buildings, which I hope will be thoroughly carried out.

Hoplanta up under Captain Robins u, n.s.

5. The fine raine I and described temple at Ambernath is about to be attended to Repairs based on the properties of Mr. W. B. M. le-k, Collector of Thans, amounting to Rs. 556, have been sentimed, and an a timate is under preparation for the rainishing of the upper perties of the walls of the can run and t war of the tenule.

6. Mr. Mulock has made some nuggestions in corpect of the (1) thesein Fort and its large colors; (2) the Kauhari core in Subsette; (3) the Kauhari core in the Char Ghat ravine; and (4) an old temple to Mahadeo in the Inam rules; of Leund.

He writes as follows to the Bourlay Covernment:-

"Regarding the form r (Be win First) in 1860. Goe rm in grant I a love for a years to a Major lattheweed, which is n w in the hands of him wings and the love of the love or piece in 1818, as I on the united to the proceed, as Mas. Lattheweed is said a claims to trees, Acc. within the Fort qual while thus occupied by a lover, it is improvable to off the latthey occupied by a lover, it is improvable to off the latthey occupied by a lover.

The Kanberi caves should have a cust shan by the Elephania caves, who would keep them an an and the anough them. A to yours ago one to the the the customer had be finding a carpe langing from a D ghoba in on of the principal cases. The decread had, it could from yellow committed mands.

"The Kondam error were hamled over to the Forest Department, but I don't believ a few of the contract of the forest of the village, which is a 122 i Valence 1377. The care therefore to the paid of the village, which is made respond to the paid of the village, which is made respond to the paid of the village, which is made respond to the paid of the village, which is made respond to the paid of the village, which is made respond to the paid of the village, which is made respond to the paid of the village, which is not been the few that the paid of the village of

there age, a small real reservance is to a related and specimed it, who have brettievably districted from the lamber of a partial and valuable of runaines. In my opinion a land of absence of the partial districted from the land of the partial districted from the land of the partial districted from the minimum also. Regarding all the above I think to a partial and tall the land of the man of the real stands and tallet should make an one I report that and of the real of the man of the real stands and the fact of the reservation of the reports, with his own runairla thereon, to the Coleman. The district washing of the runairla and the man runairla there are a sould then be considered."

I hope won to visit the brillings.

7. With respect to the Karli caves, an estimate has been sanctioned for providing iron gates to the caves, and for real view old man only from the archway. The question I cleaning up the old Buddhist carring, and the interior of the cave has been the mubject of some carra pondence, and the question is, as far as I am aware, unserting at the present memoral.

Some repairs to the monuments and mosques at Ahm labed are the year provided for, but I hope that the Bombay the management and will can the work to be thoroughly care I gut. An Imperial grant-in-aid will be given.

Mr. W. Woodward, Collector of the Pamb Muhals, has invited my attent on the angient buildings on the Pawager hill, and I hope to visit the locality before bug.

## 0

# Note on Preservation of Monuments in Bengal, dated 17th Sontember 1862.

Sir A hl y Eden in 1880 onlered the Orest Tomple at Buddha Gya to be request; thus was before I we man position to give any advice, but I visited the budding in March I. 4, and submitted the following observations to the Government of Beneal in a letter distel 23 d June 1882.—

"I have the honour to admit the following angge tions and remarks on the a territion works at Buddha type, veited by me on the 7th March last.

- "2 The work were come need by the earthlahment of my department, and in that it is not the great temple provers to Mr. Beglar's operations, my knowl less of it former condition is confined to the descriptions and illustrations in Mr. Forgo and History of India and Fastern Architecture, and in Rajendra half Intra a volume on Ruddin Gra. Looking, however, to the character of the reserve, which I examined in company with Mr. Beglar, and which is merely a see of multand but k, and considering that the original surface protection was rething but plast r, I do not so how the occurity of the building could have been provided for in any other way than that carried out under Mr. Beglar. The corollal removal of the exterior planter envelope on the old architectural lines seems to be the total manner of successfully can aring such a building; mad although the of he beam in idea blo, the great historical value of this relie of Baddhism, in my opinion, fully justifies a large outlay.
- 3. If too much he been done anywhere, it is in the votive buildings which anymmed the temple; but I heatate to criticise where my previous knowledge of the clitics of the particular in numerics is so meagre. There are, however, the important points to which I respectfully invite the attention of the Bangal G vernment:—
  - (i) The advisability of complating a series of phot graphic views of the latiklings, showing all the various tages of disceptive, program, and completion, accompanied by carefully measured plans.
  - (ii) Provision of permanent enstelly of the buildings, to prevent their being misappropriated by the natives.
  - (iii) The deposal of many hundred small stone fragments and votice offerings collected by Mr. Beginr.
- the reference to illustrations, Mr. Beglar's photographs already furnish much information; but I suggest that completion photographs he taken, and plans he made to show the former and peasent state of the monuments. These would, I should furnish an important memoir of Buddha Gya, and be worthy of publication.
- \*5. As regards contady, the large expenditure of money will be of little avail if the structure a see left to the mercy of the natives. I would suggest walling in the site, to prevent tree and cattle and altered and that a permanent and repossible on testion be appointed under the Magi trate of tiyn, as soon as Mr. Beglar is tracky to make over charge of the buildings.
- " 6 So many of the votive uper and stone fragments are more duplicates that there could be no object in retaining them all on the spat. I would therefore

recommond the Bengal Government to authorise Mr. Beglar to what the which should be kept in sidn, and to make up collections for presontation to the following institutions:—

The Imperial Museum, Calcutta. The Gentral Museum, Madras. The Museum at Labore.

The Museum at Bombay. The Museum at Juquir, Rajputana. The Playre Museum, Rangoon."

2. Mr. Beglar informs me that he has drawn up a report and estimate on the passervation of Shir Shah's tomb at Sasseram, and that he has taken in hand the escurity of the roofs and domes of the building. I have not yet been able to visit Sasseram, but hope to do so shortly, and that provision for completing the require will be forthcoming.

J. Sir Ashley Eden invited my attention in Palmary 1882 to the temph on Orissa. These and other buildings in Bengal will be reported on in due coarse.

### Reports on Central India Monuments, together with a Note on Works undertaken.

### Gwalior.

### Ist January 1881.

I visited Gwalior during November. Until quite recently, Gwalior has been an out-of-the-way city. The old muil road between Agra and Benniny proceed at to great a distance from the fortress to make a visit convenient to travellers. and the place was rarely seen except by those whose duties located them at Merar. or by an occasional tourist. The railway now brings Gwalior within 7 hours of Agra, and on completion of the bridge over the Chumbul the journey will be reduced to 4 hours. Eventually the line of railway will run through to Hoshungalad and be the main artery across Central India. Gwalior will then fore soon lave many more visitors than formerly was the case, and any steps taken by Government to preserve the fine monuments in and about the fortress will be highly appropried. I regret to lave to record that travellers often temove stone careing , pieces of colored tile-work, or any fragmentary relie that they can carry off. O here, besides travellers, have been the cause of even greater vanishism. Whole columns were some years ago removed from the fortress to adorn gardane in Morar, and some stones found their way to greater distances beyond. This, however, is Ising rectified, as my letter to Columb Oalorne, the Political Agent at Gwalior, quoted below? will show. The present Countraiding at Morar, General G rion, takes con iderable interest in the fortress, and I have no doubt that he would find it possible to provide a contodian for the monuments in the fort, and that his example would be followed by his successors. Nothing should be damaged, nothing removed.

· Letter to Calcool Willingthis teligras, duted Gentler, 19th Nationales 1800 . I have made an examination of the monuments and buildings of interest in the Owalks Fort, and see here very large to

the field for doing very resultable work revents preserving them.

With the mirantage of Capsan K ith's experience I have men all that to of greatest interest, and have examined the tw. See Bulu temples, the Tell in-Mamile, the small July temples and the pulsers known as the Shall Jahani, the Jahangiri, the Karen Hamile, the Victomaditya, the Man Mandle,

om! the Gujari Mahal

(1) the rescue of carrel pillars and stone fragments from the debris which surrounds so many lmikkings in the fort;

(2) for the collection of these carried stones at the Toliska Mandie;

(5) for theming the magnificent stone earling of the temples called the San Baku, | Tell-Ka-Mundle, and for the removal from them of the planter put in by the Malamundane, and for the outting away of descriptive regetation :

(4) for the removal of the cross of whitereach which now over the carred Irellie and covered work of the gourts in the Mandir palars,

It diese, there are scattered all over the fort many interesting curved fragments ? buildings Resides there, there are sometimed in over the fort many interming curves regments. I infilling which are no injury attailing. The debrie composed of there form a thirk covering from rule order that the other, and I feel countineed that a large mass of matter interesting and admitted as artistic access to of the part lie burnet many further interesting on require of the quantities of the the directively and also rescale in a great manner of uses lines to the point and clear ever of the buildings which formerly existed. A great deal may, hence any, henceumpilished by exercise on what Captain Keith has already extended. He has, with the nid, I understand, of a Coundition empresal of yearself, Usucrai Goolon, Major Coundy, R.E., and the Blaraf grant of Re. 1,000 from Cantonment Funds, been able to reason the Trib kn-Mamber from ill-treatment as a outlier' cuffee shelp and the proposal of the Countities to convert this building into a kind of measurement for exceed fragments of allower and around to mee to be entity of all enterpresent and help. I contain to engine to you to the file the Government of tails should be asked by the Agent Greenal for Central India to great a sense of Pa. 8,000 For-

As regards the custody of the buildings out ide the fortress, His Highn the Mahamia would doubtless carry out any recommendation made by the Political Agent at Civaline for prevention of damage and for languing them clean. The landings, &c., of interest at Gwallor are-

Tomb of Muhammad Ghase, bullt in the curly part of Akbar's ruiga. Jama Masjid must the Alamgiri G. tr .- 1965 A.D.

Muhammadan tombs near the north cod of the firt.

Plans of almost all these have been made by General Cunningham-see Vil. Il of his Report, chapter XVI; but I prop to get in hand drawings howing in greater detail the beautiful grammentation of the best parts of the pale - and of the temples.

If to this sum His Highmess the Maharele of Scindle would sold some long is my to the sol last in a untile our and string eachtance be the power of courts. I high neticular the

The Tanti of Malaumand Chant in the old city f form to the new of remember in the bountful server work which resulted building on all ractive or of remember in the locality a work with could only be show with the detail of the local of the raja. As l'aptain Keith labes in sullusinati an a rest all fla' construction distributed and seal and the flat construction of the property of the arms of the words specified, that he should be said to correct the attack from the large ment of t control the Agent General and the tienwal C. cancer I per aboutly to depth to the latter than purpose of making drawings and illustrations of the best proteons of the buildings. His Highness the Maharafa of Schulin has within this territories many fine ruins of great artistic beauty, and isolated fragments of carvings (that could not be replaced in their buildings) might be collected and arranged in a numerum at Gwalier, and form the nucleus for a school of Oriental art and architecture. Accusation of the kind would combbe the Maharaja to patronise good art.

He has already creeted one large palace of modern Italian architecture, and has nearly completed a second building which is in a very deliased native style. During my recent visit to Gwaller I went over this new elilies. The best feature of the exterior is a colourade, circular in plan, with some elaborate and well carved stone pillars and spandrils. These are being painted over in oil color a dark brown and picked out in bright reds and blues!

The interior reception and other rooms are being gandily decorated in freeces arabosques. The head painter, who buils from Nagpore, is very clever with his bruch as far as ornamental drawing goes, but has little idea of harmonining and timing down his colors.

He took we with great pride into one of the rooms to see his chef d'envicent descrited pilaster, the lower panel of which contains a copy of a coloured photograph of Lydia Thumpson in sutmittights!

Extract from a letter from Cartain H. H. Cuiz, R.R., Curator of Ancient Monuments in India to the Agent to the University Central India, Indian, dated Simia, the 3rd August 1981.

I have the honour to inform you that I have recently visited Gwalier and have seen the work being carried on by Major Keith in the fortress. The cleaning of the sanipums in the fine temples, the Teli-ka-Mander, and the two Sas Hahn in lighty satisfactory, and Major Keith has by untiring supervision accomplished considerable and most conflicted results at small test. I have received a copy of his preliminary report, but I have suggested to Major Keith the propriety of drawing out a detailed report of the work that has been done and is in hand; also that he should compile a list of all haddings, caves, and semiptures worthy of being preserved, adding any observations of his laws on the peculiarities of the variation of art exemplified in the fortress. This report is being printed.

2. The work of thering out the Man Mander Pala e has not yet been commenced, but I understand that the commission stores can be transferred to the old magazine or some other vacant building of no architectural importance; to I would suggest that an early application be under to the military authoritis for the immediate handing over of the Man Mander Palace to Major Keich, in order that the fine courts and apartment may be chanced and the whitewash temoval from the man arry walls, trellis work, and embraced ornaments. Major Keith the good deal more work to do in connection with the work specified in the enclosed report, for which Re 5,000 was an tioned.

t. The fine old tomb of Mulamunud Gham in the old city is much in need of repair and the ring out, and the chuttries of mahuraja's ancestors in the new city, although of considerable beauty, have been also red by repated to as of

• 1. Itoplat tlam, claring a voca 1811.

II J ji loog during about

111. Potel Salelle, daling about

whitewash. Many of the picture pur lankonis and windows of the city houses are spoilt by whitewash, the probabition and removal of which from stone trellis work of any kind is very advisable.

5. On the south-east face of the fortress is a group of caves containing some very interesting Jaina statues and sculptures; some tree-lead in by but wong . I by natives and cattle. It would be of advantage to clear the piece of all dwellings. The Uzwahi valley in the fort has a large number of similar I has cave and emiptures, and large masses of debris obscure their bases.

Retract from a letter from Carrier H. H. Corz, H.L., Curatar of Carl & Moragnesis 1 1 10 502 Large Green, K.C.S.L., Agent to the Governor Deneral for Control India, India, and 2 the \$1st October 1851.

2. In regard to the further employment of Major Keith, I would suggest that an application in addressed to the Government of India for Liservices for one year from the 14th March next, in order that he may superinte d

Copy enchand. Copy enclased

the completion of the work to be slowe at Sanchi, as detailed in my report of the 10th January last, and in order that he may carry out the preservative measures at Manda, recommended in my report of the 5th January.

- 3. If this can be arranged, it would, I suggest, be better for Major Keph to utilise the cooler sensoms at Sanchi and Mandu, where he must be under ennyas, and to return to his Gwaliur work in the hat weather, when he cannot to in camp. It would, I submit, be a good plan to send a Public Work subordsuste, who is a good draftsman, to work under Major Keith at Gwalier.
- 4. As regards Sauchi, I venture to repeat my suggestion that an Paga . be employed to rebuild the fallen gatoways, working in communication with May Keith, and that photographs be taken when the work is comple's.
- 5. In reference to Mandu, the survey referred to in my report of the 6th. January is complete; and a copy attached shows what jungle and a getali a should be cleared away.
- 6. If a further grant is required for the Sanchi work, I would suggest that application be at once made to the Government of India.
  - 7. For Mandu, I would recommend an application for a grant of Rs 2,000.

# Sanchi Kanakhera in Bhopal.

## 10th January 1881.

I visited Sauchi on the 27th November 1980, and remained there some days in camp. A survey has been made of the hill on which the Buildhot topes and other monuments are; and this plan serve as a record of their point of the and show what should be done in the way of cleaning away over growth and trees.

I am indelted to Captain Ball, a.e., v.c., for the promise a which was given to lave the plan and key-drawing of the fallen gateways reproduced at the Intelligen . Brunch of the Quarter Master Geteral's Onice at Simla.

The jungle has increased very much once I was making casts in 1869, as d great damage has been done by the spreading of tents and branches of the to the railing round the great tope. The opening und in this tope in 1:22 to now avergrown with respect, and they are forcing out the may no face work which covers the hemisphereial mound. The rading on the math has completely fall a

und a Ar ar well utilating the caroings on the custeen gateway. They at at us of he pillate (at II) (creeted by Asoka over 2,000 years ago)—

1 r illdo es.

As the set by, it is also build necessary for a trustworthy watchman to I always on the 1 d in order to provent such wilful damage. The remain at San hi are account to nome for their importance as evidences of surly Buildhood in tory, religion and art, and it is well the wages of three or four native custodies to ensure that through the not further, more particularly as the Bhopad Stockallway will pass tome Sanchi on it way to Bhilsa and make the place can be more necessible.

The plan of the hill howeth specition of all thetopes, buildings, gateways, &c., as hof all the fall a mason you which there are valuable inscription and carvings. A at imports manage, I have had the in postent fallen stonework numbered and the small important have been either to not the morth in gateway.

The prot work is to thoroughly clear a good at not the trees and overgrowth shown in the area - hind go in on the plan. Give timere must be taken to destroy the roots, particularly in the outer me only of the Great Tope.

I think that the roots of the tree behind then or here gateway should be examined, and if they are doing or likely to do harm to rither the tope, the gateway, or the radio r, it heald be excefully felled and the roots durient. If not, it might meaning as it rather adds to their detracts from the protocolar appearance of the place.

In n moving the jungle not more should be ent away than netually threatens damage to the masonry structures.

The breach in the tope at the south-west should be filled up and the facing stones relaid.

As a gards the ectoration of stands to their former positions, a great deal may be done to immense advantage. The miling which man surmounted the hemispherical the topological transmitted that the process on the top, and many lie below between the topological monuting miling. These should be first collected on the top and then, as far to perfect to perfect the process to perfect the perfect topological transmitted to the top and then, as far to perfect topological transmitted to the perfect topological topological transmitted to the perfect topological transmitted transmitted topological transmitted trans

All the carry if fragments is band the stone miling and the topo (ex. pting the figure of Buddha, which are still creet) should be removed to the open spet in front of the northern gate, where they can be well seen.

The a risers got is in fan condition. The a gital of the Asaka pillar lying nor a 195, 195s, 196) should be set up (at to with the status, the pieces of the bolk a pill a collected and a manufactory is that it

The corresponds much runnel. On humanal dwarf upital a dill creet in the other parts of the gate as on its and in tall the executions of the gate as on its and in tall the executions broken to in two places the third in the epice. The call Lie expetal with a broken wheel is as a fall a port and all scate, and rest of formerly on the apparatus productive, in which there are a life in purpose.

The 4 14 got in the much (u) d; t th hon-headed columns are down and broken. The appears a prohite of the holden a two, the two others broken in through us.

An A le Lie of a set three le teliameter les ou ene sid much lenden, and servit a lie Le n capital.

The contern guident, a, a can't of which I am I in I 50, underwent (for the purper of of straining of at me under a strongly bearing, and the a alphares are much improved. The changest the back of the gate in pures a tiling up. In front of the gate at two traken Aroka columns, the laon capital which has near should be set up.

The rebuilding of the fallon miling of the tape and the real or and paterness will a quire the apprintendence of a congrue a and the use of the no life apparatus. It might perhaps be parable to obtain the crice of an officer from the liberal State Railway for the purps, and lote give numeral that is mediate steps be taken.

The accompanying key plan of the south-west and smill to show while he done.

I understand from Major Pridemix, the lat. Political Agent in Blog 1, the backgrounged with Mr. Mayer the holiment of the bood at Solore, the majorithe of the extring away of the jungit, and he could do array lings are pit the rabuld of the falls again. It would not be difficult to the adjustment of the strong solution of of a compand water in place to the earth of the our of the other which now cover the carving as a other alphy softs. However, then I removed with an iron point, and the whole subbedient with a holler latest the by besting the end of a small bamboo into fibre.) A many and four majorithm gate in a few weeks.

Besides the Great Tope there are several other independing and settents removed and buildings on the Sanchi hill. The buildings hould be also be in the delere removed and carryed stone taken out and placed as to be ally to the

The clearing of jungle, &c., hould be put in last one practice, and an engineer detailed to estimate the cast of resulting the fallen and the cast of resulting the fallen and the formula the analysis works, but the Highness the Begins of the Highness the Begins of the File of the content that the first the content tand, to reader a farmer in the way of labert, and the will be the pulliture; if, however, a supplement by exact is not very, I hap that the Greenment of India will be disposed to sanction any further sum.

# Mandu in Malwa.

5th Jan ary 1851.

Manufacie reached from Minor of Dhar; there is a good metalled real the whole with: total distance about his miles. The Manufacian land lings of the rile in Lerginson's Indian Architecture, page 50; and the Mahamia of Dhar has determed the cust of republishing a short in tory of Manufacian by "A Bringer Stratum, which appeared in 1811. The it is a which the ity of Manufacian is a which appeared in 1811. The it is a which the ity of Manufacian is the Jacobian to T. At free above the sea, and rid 1,200 for aboutly also the plane of the Theorem is a planet of the Manufacian from his which the Himlion required until driven and by the Mahamata Ling, who is there are imbeged but Modern and the part of the Mahamata Ling, when Akhar a new it to his demindrans.

Sultan Healiang (the ri, where vorm 1 Mol. from 11 5 to 138 A.D., on all the first tof the Mauli buildings, the promoted Moles in 175. Marks, a first by describe. When the Makratine compared Moles in 175. Marks, a first of an important city, was devied, and by to the tender and state of the whole half and encel poletic map and pulse the rest of pipul trees show a part row for walls and done. They for each consideration work in every direction, while the error devices the case of manufactures.

The Maharaja of Dhar has, however, taken steps to preserve the five monnments of Manda, and is putting some of the best in repair. More must, however, be done before these magnificent national buildings are re enod from the powerful and prolific vegetation which continues to threaten their destruction. I propose to have a complete survey made of the following structures, and to flustrate their architecture by plan-, drawings, and detail .

(1) Rup Mati Palace .- Vegetation in the roof and walls requires weeding out and the roots removed.

The lower parts of the building are used as dwellings.

(2) Bur Buhadar ki Makel.—The jungla outside this building is very lad The pipul root have forced their sunke-like lengths into walls and domes.

The court-yards require cleaning and clearing of weeds.

The colourndes are used by eattle, and the interior vaniting blackened by sunoke and bata.

(3) Jama Margid .- A fine massive building. The east columnia is almost mined, and the coloured on the north and south are hadly ruined. The domes over the mosque are covered with vegetation.

The pulpit inside and the niches or "mehrale" require clearing. They an particularly remarkable and handsome.

The whole place requires vigorous attention in the way of clearing and reput.

The Malaraja's workmen had begun to cut away junglo here, and to execute some small repairs when I visited Mandu.

- (1) Tomb of Sullan Hushung Shah,-A handsome unasive muchle building. The Maharoja is beginning to repair it; the interior is in fair condition, and the tembetone handsomely carved. Bayoud the enclosure of the tumb is a curious vaulted corridor.
- (i) Hind do Mahal.

(ii) Chaspa Baoli. -A collection of palace buildings, but very much (7) Jetas Makal. ruined.

(5) Tuwels Makal

The Hindela Mahal is very massive and of angular design. The roof has fallen in and the walls much covered by vegetation.

The Johnz Mahal is used as an elephant tald, and the Taweli Mahal to replied by Bhila.

(9) & to Ja a Majid-len remarkal la building, having be a constructed out of the uniternal of a Jain temple.

It requires much attention in the way of obsering works and regulation.

The colomnia of Jam column committee at the kuth, and are very hand nor.

When a general survey has been made of the mine, the amount of jungle to I harm! an be indicated, and the Malaraja might boasked to undertake to have the work done, and to take imple, but effective, measures for preventing the building from falling to the ground.

Near Nalcha, which is between Manda and Dhar, is a rained Mahammadaa building which Sir Thomas Malcolin converted into a residence. At present it to occupied by Bhils.

### Dhar.

The capital of Malwa was formerly Dhar-anold Hindu city, some 23 milworth of Mandu; but nothing remains of its greatures, except two romarkal is mosquos erected out of Jama runains.

The Kowal Mools or Jame Marjid has a quadrangle of fine Jain columns, and the domes over the mosque are very fine and claborate, similar to those in the temples at Mount Alm.

The floor of the mosque is of black atone slabs, from which Sanskrit merriptions have been effaced. The niches and the pulpit are handsome. Two of the columns supporting the central dome of the nesque have on them a couple of inscribed Sanskrit grammar devices, which dow that they were probably part of a scholastic building.

The Lath Marjid .- So named from an iron column which lies in front of it -in a similar building to the Jama Masjid, but the Jain columns are not so elaborate The niches or melimbs and the pulpit are very good. Both these buildings are worths of illustration, and should be cleaned out and the vegetation removal from the courtyants and from the roofs and domes. This the Maharaja would no deal! cause to be done, if asked.

Both these mosques have Arabic inscriptions over their entrances; und the Judge of the Sudder Court at Dhar has kindly promised to get them copied for me.

## Ujain (Malwa).

### Gla January 1881.

The country of Malva before the Muhammadan conquest was governed by independent Hindu Rajns. Vierannalitya is said to have flourished at at the beginning of the Christian era, and to have founded the city of Ujain which became a facus of the arts and literature of the Hindus. The ancient city has long since disappeared, but I visited a temple dedicated to Mahadeo, t which is mar the site of the old Ujaln, and an investigation might result in the discovery of the riptions. The building is partly carthed up, but still used for worship; its columns are all of a primitive shape, and have the appearance of being very amient. Drawings would be interesting.

The modern city of Ujain is very picturesque, and has a handsome street of carved wooden houses, one of them being a pulace of the Maharaja Scindia.

Drawings of those wooden facades would be an interesting addition to our knowledge of Indian art.

Water Palace sear Ujasa -This remarkable Muhammadan residence, which I visited on the 10th December last, is situated on a rocky island in the middle of the Sipri river, about d miles to the rast of modern Ujain. It is said to have been built by Sultan Nasir-ud-din (1500-1512 A.D.), and is described in the History of Mandu

<sup>\*</sup> This from column to 0 inches aparts and has a number of hules through it. Hiter pures untillusted in the state in the Hind ha Madel at Mandu and in front of the Agency Hangelov at Dhar, and I appear that Mr. Ferguson's annulas (see par 3-1), of his History of Indian Acch declared that it was used for that Mr. Ferguson's arrests in accreed. The Handels M had taken the name from Acadelos—a unity—and this item has may possibly have been need for such a purpose!

† Called lucally Rhinel Kufae; it is near the Sipri river, about a mile sast of madern Cyain.

he "A Bounar Sumarture," originally published in 1811, and now reprinted by the Maharaja of That. He writes: "The apartments of the palace on the ground the r, might or nine in number, are lefty and commelious, on the terrace above are search arry chambers and two cupalas, which latter surm and the two principal of the lower apartments.

"Connecting this island with the north ra bank there is a stone bridge, below which to the catward is a causeway composed of alaba of stone and inpresected by numerous watercompas, some of which are of spiral form.

In different parts of the cameway are howers and alcoves, with In me of water passing through the centre, reveal of lin streams running overly along and then gliffing down sloping watercourses; at the extremny of the our way are some apartment- up a level with the bed of the river, but below the surface of the manuar; form the small spartments you see in front a short of water falling from above. " " The bridge and parts of the custoway are built up of the remains of a Huida temple; carved fragments appear in several place; and as the place is known in " Kali-Jagga-ka-Mahal, or " Kalideh," the building may have been erected out of the materials of a temple definated to " Kali Deci. The building is certainly worthy of illustration by drawings and plot craphy. It was probably it ligned to follow the example of the water palace no Manulu Luilt by Nasir-inf-din's father Olive-inf-din, and is a ingular metanos of Muliannia lan ideas of luxuriant and the lance. The architecture is innesive and picture pro. The present condition of the buildings is not good, but I believe the Maharaja Sciudia has the intention of executing repairs. I propose to have a survey made of the palace, both for purposes of illustration and to show what sh ulil be done.

# Note on progress of work at Gwalior, at Sanchi, and at Mandu, dated 18th September 1882.

I visited Gwalier in March last, and found that the Couris of the Man Marie Palass had been evacuated by the Countlearint, and that cleaning, removal of a hitewach, a moval of partitions and general a pairs had progress. I call factorily. The Teli-ka-Mamlir and two Sas Bahu tempies were still in hand, and the repair of their roof and towers progressing. Approaches had been made to some of the old Jaina care in the face of the rock outside the fort, and Major Keith was busily collecting and arranging fragments of sculpture in the enclosure around the Teli-ka-Manlir Temple. I pointed out to Major Keith that while the roofs of the buildings were in med of considerable repairs to reader them past against rain, as a will was going on in the way of arving stem, and asked him to comple e the structural particus of the roof, leaving uncarved any stones inserted for the scority of the building.

- 2. I write to the Resident at Gwaller, and registed the adoption of regulation for the outerly of the buildings, and recommonded that the a researy sometion to the male and the supering the annexed near rand in
  - (1) Names of each building to be out in the walls, with date as given in the part of the Direct of Congral of the Archa deg, al Survey.
  - (2) Chowkidars to le appointed for-
    - (a) the Man-mandir Palace. | (b) the Teli-ka-Mandir,
      - (e) the two Sn Baltu temple,

with order to report : ! Resident any me disfiguring, defiling, or dama -ing the buildings.

- (3) No lighted fires to be allowed inside the buildings under custody. The chowkidars are to keep the buildings chan, and to report to the Resident any damage from rain or other enuse.
- (4) A suitable shed or dwelling to be assigned to each chowkidar, so that no damage by amoke of cooking or other fires may occur to any of the buildings under custudy.
- (5) The orders to the chowkidars to be posted in each building.
- 3. In May last the Maharaja Sindia contributed a sum of Bs. 4,000 towards the processition works at Gwalier, and a grant of Rs. 2,500 has I in wale from Imperial Paula. I have had a cross of photographs taken of the Gwal r buildings, and the negatives have been sent bome for printing. These show the condition of the buildings as completed or in progress in Angust 1852 und Major Keith.

. Major Keith's report on Gwaller is being printed, and may serve as a guide

to the fortress and city.

- 5. Since the report on Sanchi was written, Mr. Mears, in March 1851, Superint munt of Public Works at Schore, was deputed to comove jungle from the veral mins: to collect all the carved stone fragments; to repair the great beach in the tope; to remove excepts from the face of the mound, to fill in the shaft and in the topos and to clean the inlutures of the northern gateway. A serie of plating ples showing the progress of the o measures have been taken by Din Dyal, I timat rath Profiteman in Colonel Thomason's Office at Indon, and the negatives will be set home to be reproduced by some one of the permanent processes.
- 6. Major Keith is about to proceed to Sanchi this cold weather for the purpose of a toring the fallon gateways and of mighting the repair of the tope it if Sie Lepel Grithn, Agent to the Governor General in Central India, he there gr at personal int cost in the works at Samhi, Manda and Gwaller, and it : du to his requested solicitations that Government has a morated to contribute grants from Imperial Funds for monuments of importance in Native States, and to appoint Major Keith temporarily, Assistant Curatur of Aucient Manue in Castral India.
- 7. At Mandu the removal of jungle has progressed under the Malarry, of Dhar, and some require to finiblings have love put in hand. Majer Keith will, I hope, be able to superintend some work here this add on, and an imperial gran R. 2,000, will be made to supplement what the Malistraja agree to cutribute towards the repairs, &c.

# Report on Monuments in Rajputana, together with a Note on works undertaken.

Notes on Mount Abu, Ajmir, Jaipur, Ulwar, dated 5th July 1881.

- 1. A ride of 11 miles from the Mount Abu read station on the Rajputana State Railway takes one some 4,500 up the bill to the sanitarium of that name. Here are the head quarters of the Agent to the Governor General, Rajputana, and a small conventement depôt, charmingly situated around the "Nucki-Talao" or Pearl Lake, and surrounded by picturesque recks and green slopes covered with trees and beautiful vegetation.
- 2. The mountain range ri abruptly from the plains, its scarped peaks varying from 5,000 to 6,000 feet in height. The Dilwarra Temples approach on the catern side to over a feetpath, steep at first, which then winds through a beautiful valley to the station. The celebrated Jaina temples are about 14 half miles beyond, at the village of Diwarra. Externally there is nothing to indicate the magniflorner of the interiors of these edifices. Two are ontirely of white marble said to have been brought from near Chandravati, and for minute carving and profusion of beautiful detail are unrivalled in India. The earlier of the two buildings dates from A.D. 1032, owing its Loundation to a merchant, Vimala Sah. The later one was built by two merchant brothers, Tejjula and Vastupala, between A.D. 1197 and 1217. According to Tod, previous to the creetion of the Jaim ediffices, the immediate most was occugied by the orthodox divinities Sivu and Viahna, whose ministers would not tolerate the approach of any of the metarian enemies of their faith. In order to propitate these, a bribe was offered and accepted. The merchants were accordingly not ungrateful to "Lakshmi," the Hindu goldess of fortune, whom the Jaine enshrined in a niche on the right hand of the outrance.
- 3. This stands isolated in the courte of a quadrangle measuring outside about Vimila Sab Templa.

  100 feet from east to west, and 110 feet from north to south. Along its internal face one ranges of cells—seventeen on the longer and ton on each of the shorter sides. A double columnaded piazza elevated four steps above the level of the court passes in front of the cells. In each of the alle is a small situr, on which is placed a crossed-legged figure of Parswanatha. Each group of four columns has either a multisl or a flat roof. The whole is of pure white markle, every column, dome and alter varying in form and ornament, the richness and delicacy of execution being indescribable. Crossing the payement in front of the entrance, the manalapam or perch before the sanctuary is reached.

In this the carved columns with their struts and the demed ceiling are covered with flowing and graceful foliated coulpture and by figure subjects from mythology, in which the Brahmude and Jam cuthlens are curiously blended. The builder has here again testified his gratitude to the propitiated Hindus who gave up their site, by analytining their goldess Bhavani in the couth-west corner of the quadrangle.

4. On leaving the enclosure, one passe to a square chamber with a number of columns supporting a low roof, in which is an equatrian statue of Vimala Sah

surrounded by ten elaphants and ribers. A good deal of damage has been den to the figures, and is said to have been the work of the iconoclast Aurangel, who as werable for the destruction of so many temples throughout India.

3. Repairs to this building nee vareind an persodically by the Jaine, he to are done clowning. In order to the yellow be a limitely aparating class caled covered pillurs, we a masonry arches have been in many cases built up between, thus vaccing large part of the delicate uniplaces with bricks and morter to This would be a mid of by ing the arches and by supporting the stone beams from about ith reas joints, a be bolting them together. Many of the damaged carvings have been treated with plants of Paris! All this might be removed.

6. The design and arrangement of this shrine are on the model of the Temple of Tejpala and Vestopala. preceding, which, however, it surpasses as a whole.

It has greater dignity, the fluted columns supporting the mandapam being leftier, and the vaulted interior being fully equal to that in the other in richness of aculpture and superior in the execution, which is freer and in better taste. All the marble is most delicately chiselled. The surrounding cloisters have a profuse var to of ceilings, some with handsome processional las-reliefs. At the end of the quadrangle is a fine gallery containing elephants and large bas-reliefs of Teppula and others. In the centre is a model of a temple under a small dome, together with black stone figures of Jaim Tirthankars. Repairs are excented, but the scaleful marble requires cleansing in the dome of the process.

7. This has a handsome entrance, and the sanctuary contains a large larger image of Parismath. There is a good deal of unnecessary filling up with bricks and morter between arches, which might be removed.

S. This is said to be the oldest building. The porch or mandapam has a fine dome, and the entrance to the sanctuary to elaborately curved, but dirty.

1). Plane and detailed illustrations will be prepared of all the Dien ea buildings; meanwhile it will be important to arrange for the cleaning and reter remailes here resummented, and to obtain an estimate of cost.

10. Ajmir.—The foundation of Ajmir is attributed to the Chohan Prom-Ajaypal in the first century of our era.

It is built in a lovely valley, and bounded on the north side by the fine lake The Arhal-dio-ks-Jhopes.

"Ann Sagur," which is entirely surrounded by hills, and un the west by the lofty Taragark with hills, and un the west by the lofty Taragark with the fortrees. The town is enclosed by ramparts, buth by the Emperor Jelan gry, the walls of which communicate with the citade of Taragark. Colonel To 1 in the walls of which communicate with the citade of Taragark. Colonel To 1 in the Reported says—"Ajmir has been too long the haunt of Maghala and Paths. In Reported and Vandals of Rejusthan, to affect much stop to the anti-party." It the Goths and Vandals of Rejusthan, to affect much stop to the anti-party. It has, however, one ancient building in the "Arhat-diu-ks-Hupta," or he is of further a half days," which was constructed out of a posterated Jain temple by Altanach and a half days," which was constructed out of a posterated Jain temple by Altanach in A.D. 1236. General Cunningham believe that most of the buildings which furnished materials for the crection of the great masque must have been prepare and carved during the eleventh and twelfth contains.

11. The appearance of the old rain is very pictures use, and the whole of the face of the mosque is covered with a network of alphares. The interior pallars are not so arregularly placed one above the other as in the converted measure at the Kuth, in Malwa and in Ahmedabad; but, as Fergusson says, " if they was

taken down by the Muhammudane, they certainly have been re-errected exactly as they were originally designed to stand."

- 12. The pillers have greater beight than those at the Kuth, and are more elegant in their sculptures and general appearance.
- 13. The attention of the Agent to the Governor-General in Rajputana was first drawn by the Government of India in June 1874 to the ruined state of the building.
- 11. An estimate was submitted in May 1875, and sanctioned in August of that year. The resetting of the arches of the façade, fresh paving, setting up columns, repairs to the real and the renewal of a dome in the south wing were impleted. A further estimate for require was sanctioned in April 1878.
- 15. Fortunately a proposal to pull down the entrance to the mesque enclosure was put a stop to by the Agent to the Governor-General (then Mr. A. C. Lyall) and the Commissioner of Ajmir (Mr. L. Saunders).
- 10. It was remains to clean the sculptures of the masque, which can be done at h strong roup and water or with a rolation of rada. Hard brushes made of hands beaten and water or with a rolation of rada. Hard brushes made of hands beaten on at one end will remove ordinary constation, but hard pieces of planter or dirt should be corefully removed with an eron point. One dome to the with of the masque is still pen and admits rain; and as many of the please of any are in existence, I strongly recommend restoration. It will be necessary to have a smales framed of the cost of these measures.
- The Desist Back.

  The Desist Back.

  Maghal Emperors, and the valley became filled with their palaces and gardens. "One of the most beautiful," says Rousselet, "is the Daolat Bagh, or Garden of Splendour," which was built in the extremth century by the Emperor Jahangir, and now serves as the abole of the Commissioner. Elegant markle pavilions stand on the very edge of the take, and command the incomparable view of the town, and the in untain a reflected as in a crystal mirror. The garden itself is of great extent, and full of vanerable troes, beneath whose abade the haughty Jahangir received the Amhasder of an English Sovereign.
- 16. Colonel Tod in 1820 writes:—"The gardens erected on the embankment of the lake must have been a pleasant abode for the "King of the World," whilst his lientenants were carrying on the war against the Rana; but the imperial residence of marble in which he received the submissions of that prince, through his grandens and the first Ambassador sent by England to the Megul, and now going fast into it wy. The walks on which this Majesty hat panded in the State ceach sent by air James the First are now overgrown with shrub." (See Tod's Ro arthus.)
- 19. One of the pavilion with marble pillars is used as a library, another as an municipal meeting count; but the nestivature is so spoilt by exclusing calls, that it is difficult to re like the buildings were like. It is all the alt be opened and and required. The ideags wight little in the extragria, and of test with suitable purchase would be received the as place in few ing than they receive the present treatment to and initially as labels. Estimates for the measures wage ted will be now mark.
- 20. My ir Ten Baildings.—Ajmir po beautiful lumar buildings with much material for an artist and architect; I propose later on to send some draftsmen to make drawings of armamental details of the best specimens of Rajpat art.

- Shrine of Khoja Synd at the extremity of a long bazzar which rone shrine of Khoja Synd.

  Shrine of Khoja Synd.

  from one ond of the town to the other is a gradeout paved with white polished markle and blied with buildings, tombe, mosques, and the manuschant of the Synd occupies the centre. The saint was born in the year 1132 A.D., and was the first messmary of the Korto Ajmir. Jahangur in 1610 A.D., built the manuschant to his memory. Drawings of this and the older surrounding buildings would be of value.
- 22. Jaipur.—The parent city of the present Jaipur State was founded by one Dhola Ram in A.D. 967, when he and his Kachlevalm Rajputa conquered Amber from the Minas, and transferred their capital from Kho to Amber. In A.D. 1 State Raja. Man Sing, began the present palace, uniting it with the healst trongloid of the first rulers, portions of whose buildings may be still seen behind the a man. Also A.D. 1630 the Raja, Jai Singh I., added the "James. Mandar," the Diwan-1-Khas, and several other palaces, enclosing the whole within a fortified wall. He also made the lake f Tal Komara by crossing the ravins with a band, on which he planted gardens and are tell pavilious. In A.D. 1600 Sowai Jai Singh II, constructed the fine Ganes Gatew y but the position of Amber, with its inaccessibility and want of room for unlargement led to the removal of the capital, and in A.D. 1728 Sowai Singh founded the med-

ern city of Jaipur.

- 23. On the occasion of my visit, Major Jacob kindly accompanied in to Amber Palace. The apprendence, and brildings line the road which passes up the valley formed by the Kali Kho mountains and, according over the ridge, winds down to the valo of Amber and to the Tal Kontara Lake. The Amber Palace is about 100 feet above the water level, and from the upper plateau a grand view is obtained of the old town buildings, which fill up the north-cast part of the valley. "Nothing." I bergussam, "can be more picture que than the way in which the pale is grow, a posses, out of a rocky hase or reflects itself in the mirror of the deep lake at its being out of a rocky hase or reflects itself in the mirror of the deep lake at its being out of a food views over the lake and the country beyond." An excent description of the various palace buildings is given in chapter XX of Romselet's India and its Native Princes, but a forther and more detailed account is better reserved until I have, with the Maharaja's consent, completely surveyed the palace.
- 24. The Diwan-i-Klus is a singularly bands me building. It outer reason of columns is of red sand tone finely a alphaned, but the on dit is, that to appears the jeal and the Emperor Jedungir, the carriags were covered with staces, the result of which would be unbecoming tasts and an act of mercy.
- 25. Passing through the beautiful Clanes Gate the private gard us of the palace are entered. On the left hand sale value from pavilion of the J. Mandar, the exterior of which is of white markle ornamented with its relative interior is divided into three apartment surrounded by a aerandah, as I the interior is divided into three apartment surrounded by a aerandah, as I the walls are covered with heantiful mosaics and inlaid work. The shield the uniterest work is most elaborate and sparking, and its application to the ur mirror work is most elaborate and sparking, and its application for Moorish pendentives of the callings is strikingly clover. The upper parilions are Moorish pendentives of the callings is strikingly clover. The upper parilions are more transferred and not allowed to full into rais.

- 26. The pavilion over the Games Gate has also doors worthy of preservation. On the other side of the garden are greenly palese buildings, with the
  remains of coloured moral decorations and doors of inhid ivery and sandalword.
  The set be of these relies of medicust art should, as fac as possible, be recently from
  reglect. In one apartment the walls are painted in freezoe, with representations
  of Bonares, Muttern, and Bindrahan. These are unique of their kind, and furnish
  some evidence of the original designs of buildings that have since fallen to
  run. I have discovered the Temple of Govind Deva at Bindrahan, the
  restoration of which has excited so much speculation as to the form of its roof. The
  freezoes should be carefully freed of diel and dust, and covered with a hard transparent a ruish such as need for pictures. All the beautiful marquetry doors that
  a law in the palace should, as far as possible, he preserved in satu, or elss placed
  in those spartments to which restors are allowed access.
- 27. The woodwork should be equired and kept from cracking by careful dry subbing with vegetable oil.
- 28. The modern town of Japan is surrounded by high walls and laid out with regularity. It is remarkable for the wideness of it-streets, and from east to west is over united in length; in breakth it is about 14 miles. The buildings which line the principal streets have considerable pretensions to architectural effect, but the Maharaja's palace, with its pleasure gardens occupying one-seventh of the whole area of the walled city, contains the most remarkable mammants.
- 20. Some of the older buildings of Jai Singh's time are quantly decorated with coloured tiles, and together with the wonderful astronomical observatory are well worthy of being preserved from destruction.
- 30. The more modern shiel or mirror decorations of the various pavilions, although brilliant and effective, do not compare with the older work at Amber for all games and refinement in design. It seems, indeed, a pity that the wealth of Indian decorative art is not employed throughout the pulace in place of the third rate devices of English upholstery.
- 51. During my visit to the palace I had the advantage of seeing the armoury, conducted by Dr. Hendley, and I hope that he will encountiful arms, so as to be well seen, and in carrying out the project for the formation of a museum of Indian art in Jaipur.
- 32. There are in the palace a large number of beautiful objects that seem uncared for and undervalued, from which a nucleus could be formed of an invaluable rollection.
- 33. Some fine old carpets which I am hosped in the palace stores were in danger of being cut up and sent to England. I mideratured they date back as early as the time of Akhar. Fortunately Colonel Beyont recognised their value in time, and it is to be hoped that they will be allowed by the Maharaja to serve as patterns for the weavers of this country instead of for the looms of Kidderminster.

31. Ulwar.—Ulwar is said to have been first incutioned by Fersanah, was alludes to a Rajimt of Ulwar contending with the Ajian Rajimts in A.B 112.

The city has several buildings of note, although

Palar worthy of liberation. unit of great untiquity. The palace, built by Banne Suigh, is a picturesque specimen of Rajput architecture, and i in parts wort, of illustration.

- 35. M. Rousselet says of the palace :-
- of a few apartments furnished in the lineupson explo, where are not led a bet of a few apartments furnished in the lineupson explo, where are not led a bet furnished in the lineupson explo, which are the simiration of the natural numbers and other articles from our manufactures, which are the simiration of the natural numbers plan for doing without stairs is a creation use, perturbately in this country. The pulses he may not three or fine stories, all of win' reached by goulfy-inclined corridors, prevent the accent from being fatigue; and, lie must of a goulfy-inclined corridors, prevent the accent from being fatigue; and, lie must of a lix luths, it contains a storie mahal or chamber of 'crystale, in which are aggregated all a lix luths, it contains a storie is a great difference latiness another art and the water a birecture of Amber, or even of Raignach; but still the decorat as here are extremely an and of indeed bable wealth and richness."
- 36. Manuleum of Raktawar Singh.—The manusoloum of Baktawar Singh a handsume-domed building of white markle a treatment to the resumbles the clusteries at Gavenhun both by the Rhurtpur Chiefs in the last century. The Hindus adopted the ulos of each little the ashes of their dead from the tomb-building Moslems, and the "chuttrie" of the ashes of their dead from the tomb-building Moslems, and the "chuttrie" of Rajputana are often handsome and skilful specimens of architecture. It find Singh building to certainly northy of classication by plans and details, and presentative measures.
- 37. Not far distant from the Ulwar Railway attain is a fine. Mu alea a tomb dating A.D. 1547, known as fatch Ilm tomb of open colonnales, one above the other, surrounding a left square apartment with a handsome doine. The assence will are red it paster, it is parts with handsome in used consuments, and with assert tiles. The requires a consing out, and the trees, whose research.
- 38. The windows of the limb have been closed with massary, and the at a chamber is thereby darkened. They should be opened out, and to pre ut the of bare, a ire-gauss screen filled to each opining. The regetation a the red dome should also be removed.
  - 30. There is a somewhat similar building at Ulwar called the Klam Klama but it comains unfinished.
- of the Colistan is valued at Rs. 50,000. This book was lent by the pre-nt Maza-raja to the Exhibition of Native Art held at Simila in 1879, and its leather our raja to the Exhibition of Native Art held at Palace, excited very great advicated in the Ulwar Palace, excited very great advicated in the Ulwar.

Extract from a Memorandum on the Paluce at Amber, addressed to the Resident at Julyan dated

\* \* \* \* \* \* \*

- 4. In the spring of het year (1881) I visited Jaipur and other place of interest in Rajputana, and subsequently submitted a preliminary report, copies of which were circulated by the Supreme Government to the Agent to the Governor General.
- In this report I noticed in general terms the condition of the interesting Palace at Amber, which takes high rank among the Hindu palaces that now main in India. I ventured to suggest come remedies which seemed to me to derve the attention of His Highness the Maharaja of Jaipur, but having to-day re-ve ded Amber, I beg to make the following supplementary observations in the hopomod his becoming sufficiently interested to pass definite colors.
- th. In the preliminary report on the Amber Palace, I omitted to mention two very important points in connection with the condition of the structures :
  - (1) Chujjas are broken in several places in the façade facing Amber, and some of the trellis windows are damaged and broken.
  - (2) The Jal Maudir is surrounded by a versulable of iron posts and corregated iron sheets. This is in to me to be an utterly unsuitable feature to append to a marble building of Indian architecture. It is a disfigurement by reason of its hiding the upper part of the building, and is by reason of its material more suited to a temperate climate than to a tropleal one. Its removal appears to me the only remody for doing justice to the pavilion, and for giving the necessary light to the interior, decorated as it is with singularly bountiful mirror decorations.
- 7. I now discover from my inspection of to-day that shortly before the Viceop's visit last year to Jaipur, many of the police walls were covered with whitewall, and I regret to observe that the beautiful D.wan-i-Khas did not escape this operation.
- . Whitewash is, I submit, a material which is only properly used to cover mud walls or plastened masoury, but to apply it to atone-work of architectural leasty, is to offend every accepted cannon of good taste.
- 9. I cannot too strongly advocate the extensive removal of whitewash from all bond file musonry or marble.
- 10. I also commend to notice the desirability of elemning the murble roof and domes of the Jai Mandir which have become stained and blackened by weather.
- 11. A pair of marquety doors taken from the zenuma rooms are now deposited in the Jaipur Museum, but I would mention that an order of the Maharajn's Council passed lat year decided to keep all the carved and cramm uted does be fithe Amber Palace in the palace. I therefore recommend that the doors be returned to Amber, and that the se, together with those that still remain, he repaired and renovated in order to preserve the tradition of a beautiful art in its original home. In the printed report alluded to, I took occasion to mention the freezes in the resus off the Sukh Mandir. I now regret to state that their deterioration is necessarianly the leakage of rain, which dampens the walk and discolors the paintings. I made, I cannot too strongly recommend that the repairs of the daker Palace be the regally correspond out in the interests of ladia, and asone of her valional manuscrats.

# Notes on Udaipur, Ahar, Nagda, and Chittor, dated 13th September 1082.

- 1. Not the least of the many charms of Kashmir is to be found in its meturesque huildings, whilst the surroundings of rugged cliff, some-capped ranges, wooled gious, winding river and rushing formut, combine in a thousand ways to calculate the beauty and selemnity of the accent rules. In Kashmir we have the wildness that hills and the valleys as a contrast to its massive and early temple architecture. Here and there, it is true, the refinement of the Mogula reveals itself in garden and fountains, such as those of the Shahlimar, on the city lake at Srinagar; but the prevailing elements of contrast in the valley are the grand and massive mounts of man set around with all the reconcess and beauties of wild nature. Conditions such as these infine a rare flavour into the old architecture of Kashmir, and render it almost impossible of repetition elsewhere.
- 2. Although it possesses a wholly different style and far more clair rate sulpture, Udaipur has all such salvantagers. It has architecture, picturesque and clubsmite to an extent which I had not before appreciated. It has beautiful such as unfolds it off out of mountain, slops and held, and the vast are no of artifical water which cover the country are features is lambuapa gardening on the largest solo that I know of. Udaipur was founded by Raus Udai Singh in 1565, and be conserved and carried out the id a of creating an artificial lake, on the margin of which to build a palace. The Arvali mountains, the great feature of Meywar, aurround the boulity, and by misting a dyke or land across the leantiful valley, streams were dammed up to form the " Pachola Sagar." The city is situated on an claysted strip of ground parallel to the shore of the lake, and erowning the rilge stands the palace over 100 feet in height. This pile of stone and marble, which has grown by the various additions of one sive Rause, is most picturesque and imposing. In the milst of the lake, which it overbooks, stand the two water palaces, the Jugmandir and Jaguawas, and but for their domes and kit ques, the view from the pulses terraces remin is one more of Winkenin re and Ullewater than of an East the country. The artificial lakes of Meywar are not only useful works on a large -il. but are in at beautiful adjuncts to the mixel some of well hill, gentle parties and words I slope. They is tilize the surrounding fields, their mesonry dyl. often covered with clabarate muchle sculptures, and their waters reflect and see aff the beautiful Rajout temples and buildings generally found on their chores.
- 3. The temple architecture is that known as the Jaine style, and the portant sanctuaries are all on one general plan, although the variety and fertility in features displayed in the resistor sakens, the graceful ornamentation applied to columns, the wonderful introcety of the patternal collings, and the beautiful decorative friezes of figures which cover the external walls, strike one a full of marriellous variety.
- 4. On the other land, the cular architecture of the polace, dwallings of the Mrywar nobility and city houses, is plainer, but the buildings are planned on all monographs lines, and their general off et is pictures que to a degree. The style although using the pointed architecture and the cusped openings which found favour in the Imperial buildings of Delhi and Agra, retains the individualities of Rajput architecture, i.e., dignity and repose.
- ô. Udaipur presents an imposing appearance when approached along the rest from Nimbahera, and on the afternoon of the 50th July 1 had a first impression of the city in the distance, as I drove into the valley towards the Residency. The

I have of the Maharuna, the temples, houses of the Thakurs, and dwellings and walls of the city combined to form a picturesque outline against the Arvali Hills beyond. Arrived at Udaipur, I became the guest of the Acting Resident, Lieutement-Colon-I Basa Smith, and after he had presented me to His Highness the Maharama, the anst admirable and complete arrangements enabled me to see everything of unto it in Udaipur itself, at Ahir, at Eklingi and at Nagda in the immediate meglebourhood.

- 6. On the 31st July Colonel Euan Smith took me to see the Maharana at his palace, and here it was that I had a first view over the lovely "Pachola Sagar." No bang is visible of this beautiful lake until one gains the crest of the ridge of high ground, previously mentioned as the site of the pulses and city. Driving in at a fin old gateway, the principal atreet, fined with quaint shops, leads our up an incline to the gates and range of lefty buildings, forming the Makarana's palace. Passing these, we alighted at a modern villabuilt by the present Mahamma, ami hors it was that His Highness received us, and that the lake and its island pulses hurst into view to the west. During the interview the Muharana, on becoming acquainted with the object of my visit, expressed himself in favour of prewing the untiquities and architectural manuments of his country, and said he would be willing to receive suggestions on the subject of repairs, and to allow any works undertaken by him to be supervised by an officer appointed by Government. II . Highway has not only great approximation for the beauties of nature, being je the proud of Udaipur and its beautiful seenery, but has great taste in matters of art and has already done much to improve and renovate the old prince buildings both at Udaipur and at his ancestral stronghold on the Chittore Hill. Unlike the Malastia and M slem rulers of other States, who came as compariors into posion of all classes of ancient remains, he looks with pride on the historical monuments of Meywar which perpetuate the traditions of deeds extending through a dynasty of over 1,000 years duration. Marly on the morning of the 1st August I was permitted to visit the palace buildings, and was conducted by the "Kavi Raja" Shamul Dass, one of His Highness's Members of Council and Court historian or bard. In the afternoon I visited the island palaces of "Jagmandir" and "Jagnawas." On the morning of the 2nd August I visited the Mattrice or cenotaphy of the Maharanas of Udaipur at Ahar, with Mr. Wingate, e.s., Settlement Officer in Meywar, who was good enough to show me the place. In the afternoon I wont to me the city temples and re-visited the laland palaces.
- 7. On the 3rd August, Shamul Dass showed me for a second time over the palaen buildings, my notes on which I desired to verify and correct. On the 4th August, His Highness most kindly made a collection at his palace of his arms, altights, lances, swords, daggers, ivones, enamels, &c., and permitted me to select . me for plate graphy. On the 6th August, Colonal Emm Smith, Mr. Wingate and I rode out some 12 miles to Eklingi and Nagels, where I had an apportunity of secure the fine Hindu and Jain temples of those ancient localities. On the 7th, I left I darpur for Chittore, and inspected the numerous buildings in the furtress on the 5th and 9th August. The following are the points I noticed in the various h tildings visited, and what I think should be done to ameli rate their condition and secure their preservation.
  - 8. Palace at Udaipur.-This pile of buildings has been described as standing on an elevated piece of ground above the city. · New photograph. and with a fine vi w to the west over the artificial + See photograph waters of the " Pachola Sagar." The first gate-2 San photograph. wayt leading from the city was built by Partab

Singh in A.D. 1591; beyond this is a listularme triple doorway! or Turpolia

the Man Black of the land of the Man Black of Man

and a flattened edition of the cu-pod arch noted at vv. On the rest of the columned a cution metal astronomical metrimoni, and from this production a good view to the est, over the lake, and to the well of the interference of the "Hari Mahal," the lower part of which here which was communed by Amara Singh Fig A D 1507. Blow the Karn Has are a tof spectros, will obscure windows verlocking the lake, but the restricts or two small for med real of confort, and now occupied by hunder.

- 11. The upper storey of the "B ri Mahal" is an open grad; or municiple marble tredit kingues and performs, with hands one doors with twory. In the of the court is a track occased with him a shall of marble.
- 12. The Bari Malad, also cill dila Amar Rel., was completed by Am Singh H in A.D. 1711. There are unnersulated by Am Singh H in A.D. 1711. There are unnersulated by Amar Respectively of the community of the com
  - 13. Adjoining this is the "Dilkushal," built by Kurn Singh, and described with univer work of paint d and gelt back grounds. An adjacent precision, built A.D. 1711,

is covered with blue and gold percelain tiles of Chinese make. Mixed up with these are some quaint Datch percelain tiles.

14. The Chini-ii-Chiltee Soli, built in A.D. 1716 by Sangram Singh II, consist of a court and pavilian with finely inlaid mirror work, with flowers, &c., on a ground of plaster. One small room is entirely covered with the Dutch tiles noticed above, the subjects being skating scene, windmills, beats, biblical scenes, &c. The walls of another small room are faced with dark blue and gold tiles of Chinese porcelain. The Modi Mahal, built in A.D. 1828, is do crated with mirrors and coloured pictures. Below this is the Cheti Chiltre S. Is, a court with walls inlaid with brilliant mirror messics of pencocks. Off this is a small pavilion with a modallion of the Rajput aun, and below a dade of curious rured and coloured plaster. A pair of small decovarys, with coloured wooden figures in relief of Native and European uses and women, lead to the Pitum Nuscos, or Palace of Delight, decorated with glass and percelain. A resplendent mirror throws projects over the court of the Moti Mahal. The Hand Chand, make

of which have a series of glazed uishes filled with all kinds of English China figures and case of Bahamian glass. The Rains Unyon, dating from A.D. 1571, is a bands one old court and parlies with some solid Hindu columns. The sulls of the constgard are pieceed with allow screens, and the whole is whitewashed, which is a pits. In the cutre of the floor of the partial is a manage of coloured marble pression which points to a pressible origin of the Agrae which is a party. From this one maints up to the Chardee are constant.

(" m in) Michal, from which a good view is obtained of the lake. Chobs and processional palms are stored in this building, which has some well disagned ivory doors.

15. The foregoing compose the principal partions of the first range of palace buildings; next to it is a lefty but plain structure accommodating the remain; and beyond this to the court his the "Kurn Singh's time, A.D. 1616. This is an fact nately much a mile in appearance by witherank. Beyond this again to the court his the modern vills of the Maharanae, I low which and to the case is a partry garden and modern pavilians in the Rajput tyle. Descending the ridge towards the lake we now came to a range of palace buildings on its margin.

- 18. The Akhara Mahal, or Court for Athletes, imentine northern endumiest terrace with square slabs of marble out with mater channels in intricate go metric devices. In the wall at the lack of this terrace is a window surrounded with pore lain plates, and the walls of a small apartment off the terrace are fuced entirely with poreslain plates of the old willow pattern, the effect of which is very good. Near to thus as the Himlest Below built by Bhun Singh in Colonel Tesl's time, with some English pictures on its walls; beyond to the north is the Johnsons or Fountain Palace, built by Jawan Singh in 1828, with steps shown to the lake, and come fine mirror mosaics on its walls at the lack which are worth remeating and precenting from preling away. This completed my tour of the Udaipur Palace, and I am greatly indubted to Shamul Dass for the trouble he took to show me round and give information.
- 17. Jagnawas Palace.—This island palace was commenced by Jagna Single about A.D. 1923, and is a collection of small spartments, come and garden, which alters the Maharana a pleasant retreat at certain seasons of the year. Viewed from the shares of the lake and on approaching it by water, its pinnacles and

dones make an effect ve and varied outline. On landing I found that namel. of workings were removating portions of the buildings. The Sujina Relagious nearly complete, has been almost entirely rebuilt, and some mirror decorations in pavilions flanking a tank for bathing are in excellent Native taste. The South Palsee is a modern classical villa built by His Highness's pre-less more, and not in the last harmony with the oriental surroundings. The Nader-Li-Habal, or Water Gardon, has theep channels of maconry arranding flower bods and julin , and some pavilions of great hearty described with meanes of glass which it is to be haped the Maharana will preserve. Some old which arala-ques of the care charmeter, but of great plegance and relined taste, cover the walls of the ganlen of the Khand Makai. Pafe ; a toly the damp has well them to been eles wed I con the wall, and great skill and care will be needful to orpain them. The Hes Madel is a largish open court with a hands me pavilion to the south, and me coloured frescors of elephants adorn the low r portions of the walls of the courts and, The Itel dress is a small garden with an open colounado facing the lake towards the Udalpur Palace. Here, again, mirror decorations are used to ornament the waile, and wall deserve to be dept to repair.

18. The Jagmandir Palace. Juggat Singh commenced this about A.D. 1623, and failt the domed pavilion or Gil Mal i which was occupied by the fugitive Prince Kur-See Idustryraphe. ram, afterwards the Emperor Shahjahan. The rest of the gardens, pavilions and courts were built by Sangram Singh. The field Madel is the principal building on the island, and in thir order, extensive require having been executed. terrace confronting it has, however, sunk and given way in parts, and bring of marble aluba is worth while to relay and rurse as owner to above the stend les I of the lake. The interior of this building is decreated with some hold incoming in justice, agate and onyx, and I cannot but think that Shuhjahan got the idea of aderning the Taj with such work from his residence on the Jagmandir i land. Be this as it may, the Udapur mesaic is hold and on a larger male of pattern than the elegant fedinted panels of Pietra Pura that cover the Paj, whilst the temb of Shahijahan's father at Shahdara, Lahore, built shortly after Shahjahau's flight to Udurjair, has measies more like those of the Gill Malul in the scale of pattern The repairs to the Gul Muhal have so far been eilleseims in beeping out min and preserving the hundring, but the heavy pointing in planter introduces an objectionable network of white lines into the exterior of the wails and done . In both island palueos it struck me that the pulms, shrubs and trees had been allowed to outgraw themselves, and by so doing absence the buildings.

19. Udaipur City.—On leaving the Udaipur Residency the rity is entered by a distible gateway of hold and effective design:

See photograph.

The domestic architecture which on very in givent variety on the way to the palace is full of interest and suggestion, and was anywhere else be remarkable, but the palace buildings and the count the island of the lake part all clea in the shade. There are, however, very remarkable tempha, the principal one having been built by Jacoust Singh 11 in A.D. 17-ct. Although

of Meywar. It preserves all the main characters the of the accient dain temple of Meywar. It preserves a fine parch and lafty anothery covered with bold figure fricans and acciding to commont and inconfronted by a hundred of the or attaching a large brazen image of Garada, whilst thanking this to the or the and south are small and well conceived temples definated to Gauch and Mahades. Whiterask, which seems operating to be a such in faith a. It may of the confidence excitations of the buildings, and I cannot too already advocate the emplete excitations.

20. Ahar .- The small hamlet of Ahar, two miles to the east of Calaipur, is th later ting an irot ate of the city of Alar. adquiranted 3 Pragments of carved tone are found in the village walls and buildings, notably in one Juin temple . Near the read is a small and highly sould turn I temple and to have be more feel made, the america of Mine Hall. It stand is dated in an earle me and is much rained the evulpture having been mutilated and covered up with placter by Alaugur. Some fittle distance beyond the village are the chutteis or count glass of the Mahamus of L'daipar and other in tables Meywar. 21. Nagda and Eklingil.—Nagel . 12 miles north of Ud ipur, is said to have been founded by Baque early in the 8th century, and close to it is the temple village of Eklingii, also connected with the early 14 of this first of the Maywor Ran s. The antiquities of the I ality are therefore at least hist result important. Iron the accompanying diagram the position of the temples at Nagda and Pklingii will be understood. The lake which separates the two villages is one of the many artificial waters which learnify the I daip in valley and it convenied at I wooded labs. The in st interesting uncent structures at Nagda are two taple called the "Sn Bahu." Their position is shown at A and B. Bath are in the first rank as specimens of Janua architecture, and are exceedingly ornate and amparatively perfect. There are no inscriptions to give any account of the remarkable meanuments, but I imagine that they are both anterior to the 11th utors, and that it is earlier than A. Record damage has been due to both by each may the locality and by endeds.

lightning Being in the Mogul style, and not of the best type, its removal would, I think, le a gre t imprevement, and it would be even better to entetitute a flat unpotensive govering in its place rather than attempt any imaginative restoration.

A number of chhujjus, curuices, pillure of projecting anulors, parapets, Se., se-

quire renewal, and the ubiquitous weeds about it be destroyed.

31. Near the tower and in a south-west direction is a large stone temple. known as the Mokal-ji-ka-Mandir, dating from the loth century. It is choked up all sides with enjetation, and its rouf has been invaded and nearly destroyed by pi al rodo which obtaild be remn ed. Some loss about walking abulling on the temple a ld be taken down and the while atrusture act free. What is now intolocured the sculptures of the exterior shows some very fine and interesting friezes of henry subjects depicting real comes in history. The everings coquer cleaning. The unters out the purch and tempte about the thoroughly cleaned out, and some of the marancy on lintels, Are., requires alreagthening. The thor of the nanctuary is below the ground level, like that at Ambernath in Bankay. North and east of this fine old hudding are two interesting doorways that to the east is an the street of the Sindhi becar, and the hopees which correct on it eight and left might with gral adeast oge or mored. My guide called both of these gateways "Ahar-ki-Darwaza." Close to this spot to the picture-que and historical form-Picy place acceptable

tam and tank known as the gaz-anth, and above is the Mobinate, where some of the early Rums were cremated.

- 32. The foregoing are huldings that my guide Jive Ras, the kiladar, showed me the first day of my visit.
- 33. On the second day I began by examining the Raw Pol gateway, from whence Akhar is exid to have carried off the woodan doors to the Agen Firt. 1 tuck an apportunity on my return eid Agm to look at them gate, and there can he un doubt that if they are the original once from Chittore, Akhar had them exceed with the present plates of capper ornament which is thoroughly Muhammadan and in the same style as the ornamentation in the Agra palace buildmgs. The Ram Pol galeway is a handsome musoury structure with held friezes along the plinth. See photograph. Tegetation chantil be remired.
- 34. The old Jain Tower (A.D. 806) of Sri Allat is in considerable disrepulr and will require very eareful treatment. I tree is doing See photograph. great downge in the apportment storcy, and there is mu I vegetation in the walls. One of the four projecting windows in the top storey has fallen upay, and the niche with an evert Jain figure to the east will ocon fall unless attended to. The carriago near the base want cleaning. This temple wear the Jain Tomer has some hands me carvings inside See pleasureph. and out which are very argicited and diety unit

deserve clausing.

- 35. The ancient temple to Mahadeo, Vilkant by name, is said to have been built by Bappa in the 8th century. It is ton photographs. kept in some repairs, and has a resident priest.
- 30. Close to this is the Sunj Pol or liste of the Sun, a plain structure, and the a storn entrance to the fortre a. A little further on the road, the temple of Some leldenhaner Mahadoo is passed; its siken or tower is partly fallen, the enclosure con med with fragments of mulpture, and the porch or mandap has lost its dome. The senetuary has that possibler sunken chamber which I first observed in the temple of Ambernath in Bombay, and the plan of the temple is on the lines of an edagunal star. Tegetation and Ivers are doing damage; sculptures require cleansing.
- 37. Next comes an ancient looking building with two small domes, haid in the Hindu fashion of horizontal courses, called the "Chattrang-more-ka-Gamta."

38. The Pudmini-As-Madul and its island palars are being required by the Maharana Sujian Singh. The principal gateway is See photographs. a hamborne piece of architectum. The wicker and

mariney barement firing the tout have unfortunately been whitewarhed.

33. The Moda Kali Temple has all the appearance of being aucient. Its sikm and domes covering the porches have been See photographa. renewed in planter. The exterior carvings are They require cleaning. The purch has a fine eviling. most interesting and enrious.

10. The Patto Sing and Jaiwal Palaces are pinturesque buildings with flark blue tiles showing in portions of the exterior. A short distance further on the Tower of Victory comes into view again, and the circuit of the forteres is complete.

11. The remedies here recommended are not very elaborate or difficult of viceution. The structural repairs will require skill no doubt, but a very considerable inprovement will be evident by simply clearing vegetation and cleaning up the buildings and their surroundings.

### Note on works in progress, dated 19th September 1882.

The Dilwarra Temples are under two panchayats or committees, one at Sirohi. the other at Ahmadahad. The former can canction annual regain up to Ba. 2 100.1 and original or new works up to Ra. 15,000. The recent require are, how ter, clumay and certainly maxpensive. I have authority to survey the various huddings.

2. At Ajmir a survey has been made of the Arhar-Jin-ka-Jhopro, of the Daolat Bagh, of the Khoja Synd's Tout- and ourranning buildings. There is an but one down that is unrepaired in the Arbridin-ka Hupra. The embaing quadrangle requires repair in places, and the carved fargments in the mosque proper about

be cleaned.

3. An estimate for clearing one of the marble pavilions in the Daolat Bagh has been sanctioned, and the work has commenced under Mr. Brassington, Executive Engineer, Mayo College. The adjoining marble pavilion, new used as a station bilitary, will also be charred and repaired, and a grant of Rs 2,000 has been contributed from Imperial funds. The humman, occupied as the Commissioner's office, should he required as more as possible.

1. The survey of the Khoja Syad's Tomb will show what remedies are orsen-

tial to the preservation of the numerous buildings.

5. A restored drawing of the Taragarh gateway has just been completed, and I understand from Lieutenant-Colonel Steel, R.E., Secretary to the Agent to the Governor General, Rajputana, Public Works Department, that the funds for its reconstruction will be provided.

6. In regard to Ambar, near Jaipur, I have recorded my view in a memorandum of 18th August 1852, see page claxiv, and I hope that His Highness the Malus-

min will take the matter into his serious consideration

7. I am not aware of anything having been dear yet at Ulwar, not having been there since April 1881, but hope that the recommendation in regard to Fat h

Jung's Tomb will at last be earried out.

8. My report on Udaipur and Chittore recommends a number of simple remedies which might easily be und ctaken without delay, but for all structural repairs I recommend that an officer be appointed to draw out the specification of work, and to supervise it whilst in progress; but he should, in my opinion, have no responsibilition as to rates or the dishursement of money. Mr. Brassington, Executive Engineer of the Mayo College, Ajmir, could supervise the work at Chittory, and the angustment of his acroses would be the most convenient and inexpensive arrangement that I can think of. Chittore is 12 miles journey from Ajmir, where Mr. Brassington already has an other and catablishment.

### T

# Report on Monuments in the Punjab, together with a Note on works undertaken.

## Note on Umritsar, dated let January 1881.

- 1. The Deeber Sabibar fielden Temple.—The temple or that Mandar as it was a first called was built by Guru Arjan, the successive of Rúm Dás; it occupied a struct the present building in the matre of the samed tank, but was to a lin 1701 after the battle of Glinlu Ghara near Ludhiana, and was rebuilt in 1702.
- a. Malaraja Ranjit Singh, after searing Uncritsor in 1502, spent considerable mans of mency on it, and from this time the temple has acquired the mans of that a Saluk. The building is a remarkable specimen of modern Indian architectre. Its features and details are partly Hindu and partly Mahammalan in 151, but, as Mr. James Fergus on observes, wither it outline and its details can be commonled. The general effect produced by its murbles, walls of me no, and domes and upper storey overlaid with gold is, however, very rich ad splendil, and it situation in the midst of the le utiful lake, strounded on all four ides by pleture pre pavilions or "hungas" as they are called, shows off the billing to full advantage.
- 3. Unritarische Holy City of the Sikhs, and the Gohlen Temple and it surron in me am held in the highest reverence. A Committee of Sikhs preades over
  tre welfare of the buildings, and repairs are now being sadalously exceuted, both
  11 to a doubt do the temple. The pointed and gilt intrins decorations are being
  ren well, where facked a damaged, in a unsecurity way. This show that native
  12 to the law by a, as a the roughly capable of constaining the pleudid
  of an attrium brought into India by the Meslams as they were in the days of
  Attar and Simbiglians.
- t. As regards the preservation of the temple and the outlying Sikh building, I and the immed a greater attention to cleanline. In spite of the same ty had compel every visit r—Native or European—to remove his show, there is a there in the ends we who, the standard are determined I also naticed the report of the inland and narved woodwork in the Darshami Darware, in the world as in the temple, and in the Bala Atal to be inferring from dirt and needect. A little p and water and occasional oding would go far to prove the workwork which is very beautiful of its kind.
- a. The Bolm Atal is a lefty tower built over the tomb of Baba Atal in A.D. 1.20 and is one of the buildings held in reverence round the Golden Temple. Beyond it size and pleasing proportions, there is nothing very remarkable the cute for . In the interior decorations of gold and colored nube-que are two and land one. These latter are also being renewed by the Sikh Committee.
- 6. In accordance with the wishes of Sir Robert Egerton, the Lieutement-Govern or of the Punjah, expressed to me ut Lahore in Naturalise last, I have caused that I be put in hand of the Golden Tumple and the neighbouring tower of Bala Atal.
- 7. B. I. general plans, sections and clorations, details are being made of denormany—maid work in marble and wood—of wooden carvings, and of the gift and painted interior embellishments.

- 8. These when complete will furnish some interesting material for the study of modern Indian decorative art.
- 9. Raw Boys.—To the north of the city is the Kam Bagh, which was enclosed as a garden by Raujit Singh about 1820, and in which he erected buildings for the accommodation of himself and his court whenever he stayed at Harritanr. The buildings were, nutri quite recently, used for the district courts and treasure, but another more convenient site has been found on which the kutcherry is newly built, and the Ram Bagh is well cared for as a garden and the buildings kept up as objects of interest only.

Extract from a letter from Carrier II. Il Colle, E.E., Carater of Aucient Monuments in India, to the Servetary to the Government of the Paulis, Public Works Department, dated Sacis, 23 I August 1981.

I have the honour to ender a copy of my report of the 10th May 1551 (-page XIX) containing vertain recommendations for preserving national buildings
of interest at Lahore and Delhi, and to schicit that I may be informed whether
His Honour the Licutement-Governor wishes to undertake any of the works
specified before the close of the current frameial year.

2. The plans to show the present condition of the buildings, and what in y, with advantage, bu done, are in course of being faired out in my affice, and it will be necessary to appoint an officer to frame the estimates.

Extract from a letter from Carrain H. H. Corn, R.E., Curatored Aucloud Minimuments in India, a the Secretary to the Government of the Panjale, Calife Works Department, dated Simin, Edel August 1881.

I have the honour to report that I have consulted with Major-General Cunningham, Director General of the Archaedogual Survey, as to the best way of dealing with the Buddhist rains in the Peshawar Division; and long to submit the following recommendations, in which General Cunningham fully concurs.

- 2. It is well known how interesting and valuable are the oremains, both from an archaelogical and artistic point of view. On the one hand, General Communication is anxious to continue an examination of the Peshawar Valley, which has already yielded so much valuable historical and archaelogical information. I matter; and on the other hand, I would make the importance of preserving to posterity what remains of the art and architecture of the Gandham Monasterius.
- 3. Already many valuable and beautiful sculptures have been exhumed from the Takht-i-Bahi, Shahles Garhi, Sahri Bahlel, Jamal Garhi, and cleawhere, and those that are now exhibited at the Calcutta and Lahore Museums are of the highest interest and value.
- 1. A good deal more may be discovered and be applied in the elucidation of Indian archaelogy and act. Many of the place already examined may be expected to yield further discoveries; and the village of Nogram or Rangar is a very promising site.
- 5. How far the remains that may be brought to light can be preserved to are is I think, to be only determined by consulting with the local authorities, and by taking each case on its own merits.

- 6. In our places the fauntoism of the Mahammalans is a source of the r to the figure eculptures, which they mutilate the instant they are dug out of the analy mounds and carthed up rained buildings. In such cases I think the only way to preserve after excavation is to remove the sulptures (a) a place where they can be guarded.
  - 7. In other cases it may be possible to arrange for enatedy.
- 5. Very few of the remains appear above ground, and the first step is to source the services of a company of Sappers and Miners under the command of an officer with a taste and appreciation for archaeology. The next step is to trainine executing the most promising localities and to execute.
- 9. I would recommend the examination of the Takht-i-Baht, Shahbaz Garhi, Jamal Garhi, Shah Deri, and Takal Bala (tour Pealawor), and timt the configures which may be laid bere and rescued from sand and meth, be collected at Nuoshera of from theres distributed to the various Indiau Muscums and Schools of Art.
- 10. At the same time I am strongly of the opinion that any buildings or ancient remains should, if possible, be preserved in situ.
- 11. If these recommendations meet with the favourable consideration of His Henomethe Lieutenant-Governor, I hope that the services of a company of Suppose and Miners may be secured for a short time this ensuing cold season to carry out excavations and examination of remains in accordance with what General Commingham and I, in consultation with the local authorities, may recommend.

Prince from a letter from Carrain H. H. Chies, R.E. Curator of America Mountaints in India, to the Secretary to the theoremment of the Princet, Public Wirks Department, duted Soula. Sets September 1881.

In reply to your letter No. 139 of the 19th instant, I have the honour to recommend that repairs to the following buildings be commenced:-

Jahangir's Tomb at Lahore.

Shahlinger Gardens at Labore,

The Kutub buildings and grounds, Delhi.

The ground Humayon's Tomb, Delhi.

2. The plane for three will be submitted in a few days. In the meanwhile I leg to strongly recommend that an application be made to the Lieutenant-Cov root of the North-Western Provinces for permission to ask Mr. Heath to vivit the buildings mentioned and to draw up the estimator.

Extract from a latter from Carrate H. H. Chire, R.H., Cucatur of Austeri Monuments in India, to the Inspector General of Milliary Works, dated Simia, 2nd October 1881.

Referring to the letter No. 294B., dated the 8th instant, addressed to you by the Government of India, Public Works Department (a copy of which was forwarded to me for information), I have the honour to solicit your consideration of the various recommendations, referring to huldings

- report \* datas 10th May 1880 (see page xix ).
- I respectfully beg to recommend that the works be put in hand as soon as positie. The plans and drawings alluded to in the report will in a few days be to dy to be emburited to you. In the meanwhile I would suggest your applying to the Cay rement of India for a grant of its 10,000 for the United Res. and

- 3. Mr. Heath, Evenier Engineer of the Archaelogreal Div ma, New -Western Provinces, will probably be employed at Laboue and Bodii by the Parish Cover ment in the repair of buildings; and I drangly to man of that decities by taken of his experience to execute the weeks in the Part at there places.
- 1. I have suggested to the Punjah Government the propriety of procuring Mr. Heath's arvices, and recommended his deputation to Simla for the purp of framing estimates from the plans in my office.

Extract from a latter from Currette H. H. Cona, R.B., Caratte of Amiliat Membrants in India, to 1 Impactor Courns of Military Works, dated but I bruney them

Referring to my letter No. 448 of 2rd October 1881, I have the homen; to eargest the following preliminary measures :-

2. Labore Fort-Dieun-t-aus .- The provision of other larged accommodate may take some time to arrange, but I strongly recommend that the painted apartments in year of the throne be arrounted and all colour or whilewa hing prohibited

Kheub-guh .- To be charred of its church tittings.

Juhanger's heildings .- Uned as a Reman Catholic dispol and taff quarter to be evacuated, and the soulptured column freed of the whitewash and e house walls.

Belki Fort-Diman-Lam. I recommend the removal of the cantoen. drawing showing the origin mosaic behind the throne is in hard, and will be cabmittel.

3. Discan-i-Mar. - The roof to be strongthened from the top by the insert in of iron joists. The prescut printed wood neiling to be remisred mente, and renown ! where the wooden penels and mouldings have been removed. An a tin to he repainting the coloured ceiling at the rate of Rs. I-S per square foot by Innail Kliss. miniature guinter, Chandui Chank, Dellu, seems to me worthy of consideration; but it would, I think, be prudent to have a sample painted at one corner for appared, which would also serve as a muster for the rest of the work. Only the centre coiling requires reminting.

Sowan and Bhaden,-These pavilions are used for serving out rations and for gymnasium, and should, I subunt, be cleared and cleaned.

4. The following plans and drawings are forwarded by post; but I hope that they will be returned as som as done with, as they are required for purposes of illustration :-

(1) Plan of Delhi Fort (buildings of inter-t coloured red).

(2) Parilion called Sawan in the Delki Fort Hibadon is a similar pavilion).

(3) Paintel calling in the Diwand-khas—Delki Fort.

(4) Plan of Labore Fort (heiblings of interest colonisi).

(5) Diwan-i-am in the Labore Fort, as it is.

(n) Diwan-lam to the Lahore Post, as li was.

(7) Kliwalogah in the Inhorn Fort.

n. Some mates on the combition of buildings of historical and artistic interest at Lahore and Dolli are melowed.

### Lahors Fort.

Directions.-The original railing which was in front of the building he all loop removed, with the exception of a few uprights. The steps, too, have all the appeared.

Of the hudding to If, the open p vilion has been enchand with walls on the most and by a variable on the south, and whitever hed.

There is a cornice running round the building, which has evidently taken the place of the original chuija. The present parapet wall, too, is evidently new.

Houses at look.—Lower floor only passages. Upper floor rooms used for meals. All the walls whitewashed.

The ceiling has not been interfered will, but the centre flower has been removed in nearly

The plaster ceiling has been taken down in the rooms marked A A, and the roulted masoury exposed, howing large cracks. Flooring in good order.

A brick parapot will has been put up between the columns on the north side in place of the original railing. Flooring in fair order.

The ceiling over the inner room (B) is being disintegrated through damp getting to it, as also some of the coving, measuring 21 feet; and another portion 5 for long. There are two cracks across the room at the back, and a single crack from and to said in the open paydion.

The marble dado in fair order, except partiess inlisting incasuring 3'×3' 9" nud 10' b' × 0". The ciling is destroyed with the exception of a few pieces. The centre ornament completely give, but no cracks preceptible.

The marble dade nearly all gone; only a few slabs remain. The ceiling tracked in remaindance, and looks unsafe. The marble columns are very dirty in the throne and gall ries. The perforated stem railing between the columns has been removed when marked with the letter s in plan.

The qualt kink on the roof lan been blocked up on all sides and door let in

The whole has been whitewashed,

Khwal-gah.-Out ide pavement worn and damaged.

The exterior of the building is in good preservation and intact, but a thickness of fi inches has been added to the paragraph wall.

Inside the open archivage have been filled in with wooden door frames. Flooring in tolerably good condition, but a good deal ween, particularly the grey stone.

Received—No. 1, plain stabe; No. 2, mbid with mathematical figures, damaged to place; No. 3, in fair order, but a few stones removed from the paving. The legisland fent is placed here. No. 4, same as No. 2. No. 6, only plaster flooring now.

The perforated arrown work in these meesses is in good order.

The old roof has been removed.

S. all purition notified the Shad Mahal .- The outside is in good order.

The column tone paring of the outer plutform is sealing off.

The Berring in ide to of planter, except at the north and, measuring 14'3" x to the rentre of this was a country x4' of (now filled up), and the side portion of much with a larder of infall work.

The wall at the wast and has a marble dute at he longly, gittled and pointed. Above this deals the wall was pointed, but now in a damaged condition.

The colling has mink in the middle about Co. A portion at the north end i of short copper 13' × 3', the centre partion of which is plain, but the border is a rue of flower I jattern.

Short Makal .- The flooring of the open courtyard facing the Shieb Makal in

worn as I broken, as also that of the fountain.

There is a low parapet wall of brick masonry round the fountain, which seems to have been lately put up.

drawners .- Planning of open verandah at conth-east corner broken up.

The long room in use as a store for keeping old Sikh wanpons. The doorways have glazed frames.

Naulakka Barj .- The plinth is in good order, except where markel. The steps are lad, and seem to have less Exterior. put up recently.

The lower panels are in good order, plain marble. The panels marked 1 and B are in a mined condition, only a few atome of the inheid work remain. The stone-work has been removed altogether from the two panels C and D on the apposite and of the doorway. The burder between these punels is he fair order, but many stones removed from it. Above the suffit line of the door is all plane planter work.

(Prout) .- Only a few stours remain of the inlaid work in the panel marked E. Panel I taken out besily and plaster sulsituted. In the pumple G and It unly a few stones East side remain. The panels above and below these are of plain white marble, and are in fair unler.

The stone beam spanning the entrance has emaked in two. There are other emeke, as shown on the delwing; the border between the panels is in good order.

In the panels corresponding to A, B, C and D only a few stones remain . the inhaid work. The punch above and below are plain. The bonder is in onler. The chaffe and North well heackets on the south end are of wood; as also a pertion at the north-west corner.

The with-cast corner weren to have been recently rebuilt. Phoring of lime mortar: is in fair Instite.

order.

All the flowers in the inlaid work of the dade have been removed. About half of the mosain harder has been removed, and putty and paint enlectituted; the remainder is in fair order. The painted work in the panels above this is in fair order. The pertion above the decrease is in good preservation.

The willing is emoked in several places.

Of the inlaid work on the marble columns, very few stones are left on the buses; but the work on the capitals is in fair meservation.

Two open par llions on either side of the Naulahka Barj .- Flouring broken up. Hean nerves opening at north and cooked in three places; a pipal tree has taken root at the Pavillon on the goath sale. lack fithe wall, a shown on the elevation.

The whole in fair order. Pavillen on the morth side of the

Maniahba Burj.

The inlaid work on the bases of the march commission beat loca through

said must of the atone removed, otherwise the mouns in the lower floor are no good order. But the rooms on the upper their are in disrequir and dirry.

Moti Majid.—Flooring in fair order, but a pipal tree has taken root opm contract.

Opm contract.

heaved the slabe round it. The flooring has also longed out in two places marked + +), evidently caused by the roots of the same tree. The black marble lousid work on the outside walls is damaged in arral places.

On the court dome is a pipal-tree (b) on plan shown in elevation, which is can ing the slabs to be lifted up from their bods. The same is being done by the roots of a tree (c) which has taken root in the middle dome. There are a few mans small trees on the roof, and one of good size at (d).

The made is in fair order and kept in repair. The open archways outside have been built up and doors and windows let in. The entrance lobby is in a gleeted state; the planter has fallen off and the flooring is in a buil state.

A pipul tree is growing up against the entrance steps.

# Shahlimar Gardens near Lahore.

The alcove at south-west corner.—Inside plastering all gone, as also from top

West wall of enpole. This wall is in a raised condition.

The partiest immediately adjoining the pavilion

de. The brink-on-edge terrace is in a very bad condition, especially 170' of it to

the outh. The small wicket (76 feet from conth-west corner) has been blocked

up, the arch having fallen in; a similar wicket has been blocked up on the other

wich of the pavilion used by natives. The terrace on the north side of this pavilion

is in fair order.

The above beyond this pavilion is in a very had condition. The chujja work has fallen away; the plaster on the ceiling is falling off.

The wall beyond this alcove is bent in the shape of an S-for a distance of 288 feet.

The terrace along this portion has sunk and is in a very bad condition. The remainder of the wall on this side is vertical, though shaky; the plastering has peeled off.

The terrace beyond this up to the gateway D in in fair condition, but mink in places.

There is a good deal of vegetation springing up on the wall near the gateway.

The tilework in the spandrils of the large archivar on the inside has been Gatesay It with tilework. The removed. Four panels are in fair condition for totally removed from clover and the other four are in a very had state. In the coffit, ten patterns are gone, the remainder are in fair order.

The south pinnacle on this gate leans to one side.

The terrace beyond has sunk very law in consequence of water having balged.

The alcore at the north-west corner is in a ruined state, the chajis work has been removed; the old ceiling on the lower rooms was removed and been replaced with one of reeds; the roof rests on rough 'bullies' (suplings).

In fair condition, but the plaster gone 4 foot from the ground; the upper pertice is falling. The payement has sunk and been destroyed all along this wall.

The pavilian on this side has been repaired lately in a rough way. The roof rests on beams and burgalis. The old staircases on either side, leading to the terrace on the roof, are in a rainous condition.

There are traces of a staircase in the floor of this pavilion which led to the garden on the north side of the present one. This staircase and passage has a been blocked up.

The alcove at the north-east corner is in fair condition.

Portion between north-east corner and gateway E in a had condition; plaster falling. The gateway E is in a ruinel state.

Of the tilework in the front clovation only 71

panels remain.

The spandrils are destroyed; tilework gone. On the inside the tilework is destroyed to a height of 8 feet on the morth, and 6 feet on the south. Also at the crown portions are gone. A portion of the wall between this gate and the hammann has been repaired. The remaining portion (246 feet) is in a bad condition. The high wall leans over for a distance of 110 feet from its end. The partion adjoining the hammann is vertical, but the plastering has gone.

The dome over the alcove at this point shows a large crack. The chujia work is destroyed.

The columns of the balcony have all split above the springing hue, and the whole weight of the balcony new rests on a wall recently built up. The original cantilevers evidently gave way.

The gateway near this alcove is an a dangerous condition. It does not can to be in use now as a thoroughfare.

The wall beyond to the south-cast curner is in a bad condition. The paving too is bad.

South well. Has lost numb of its plaster.

The entrance steps broken in parts. Entrance corridor is in fair reder; plaster bad. The two outer doors are cough and to have been put up recently; flooring of all the rooms is broken up in places; plastering in fair under, but the whole dirty.

Wall sunning east and west, between the two alcoves Q and H, in disrepair. The cornlec broken in several places.

The paving along this wall is worn out. The stone facing is all scaling off

A portion of the miling (15 lest) on the west sale of the pavilion, together with the upper wall, have been upheaved on account of the vegetation taking root.

The brick termee on the west side of the centre pavilion has sunk on account of water belging.

The terrace along the channel has muck in several places. A portion of the flower beds round the large tree (a) has been upheaved.

The original miling on the upper terrice seems to have been removed.

Pasilian 1. In good order, but the marble dado has been removed in many places.

The brick-on-edge terrace along the channel has sunk in several places.

South entrance. In fair order. The muchle dade has been removed in several places. All the pavilious round the large tank, as also the one at the south entrance, have been required and whitewashed.

### Shahdara near Lahore.

Juhasgir's Tomb.—The paving on the platform on which the tomb rests is in a very bad condition. The red sand tome facing of the plinth has been removed. A portion of the paving measuring 1' × 38' × 10' on the south has been removed.

There is a good deal of vegetation springing up on the walls and minarets of the tunb itself. A small pipul less taken root on the suffit of an arch on the worth-castern corner.

Outer areals of the souls Colored segin on ground plan, measuring-

Gold had work.

In tolerable preservation,

Centre hall. The criting on the south aide has sunk below the cornice to a depth of about 5 nucles. The original painted work is covered. What now remains was done recently and is incorrect. The colling of the inter colourade is in better condition. The planed work in those what was originally done. It has been damaged in a cal places through the leaking of the roof. The spanded of the centre archive, on the auth side shows a number of cracks.

Ham an,—Roome lettered in plan.—All the stones from the flowers wanting,
Messie work in data.

Walls (above the dado) and ceilings white-

washed in all the rooms.

Ham A Flooring in pretty fair order, except where

toom B. Same as above. Corridor between B and C in good condition.

Floring in good progration. Inlaid work in floor; a few flowers remain intact, others all gone, but the stalks and beaves intact.

Boom D. Same countries as C. The slabs round the fountain are boose in their leafs.

Corridor between D and G. Flooring in fair order; walls whitewashed. The red and tone that in the ceiling are scaling off.

Boun E. Flouring repaired; walls and ceilings white-

ham F. Flooring in fair order, as also cistorn,

Same so P. The cistern in this room to in a ruined condition. All the stones from inlaid work have been cemoved, only two or three remain.

Ross II. Planning in fair order. Cistern in much the same condition as the one in the ross G.

[N.B.—The three eisterns in the above rooms (F. G and H) are mid to have to brought from the gardens of the Fort. Those were to use as purely sitting rooms.]

Most Marjid.—The flooring in the open courtyard is in fair order; but the shale from the fountain bed have been removed.

Flooring inside the in que in good order. Some stones from the intall work removed. A new panel (the top one) of the entrane dear has less a recently put in. The outer walls cound this mosque are said to have be a built after the mutany.

Sam in Bari.—Pl. ing.—No the vermidals. Portions on either ide of the changle in a very last condition. East owner room is sank in several places. The the ring it go are all worn and scaling away.

Walls ne le ling s.-North verandale pla (or in dimepair. One of the stance thave in the ceiling (the centre and i cracked and unume.

Roum at north-on t corner. Celling a variation of the united

Room under dome. Messir work. The stones from all the flower removed only loaves and stalks remain latest. Small lay-window on east sale. Pautice in the colling obliterated. The railing between the columns goes.

The other rooms in this building in fair order, except the mosaic work of which the flowers have been removed; the stalks, links, and leave are north, all intact.

Drawn-i-an.—Flooring flags worn and scaling away. There are marks for atono railing which existed between the order columns. The steps on the west side are worn and chipped. The flags on the face of the east wall are scaling off, as also the stone pilasters along this wall. A portion of the coving has been broken.

The detailed drawing of the Poscock Throne mossie work shows where stone are missing.

Nakker Khana.—This building is in good condition, as it is constantly repair it, except the two recesses on the east face, which are both in a daugerous condition. The joints between the slabs lining the arched roof have spened and the whole threatens to fall in. The elevation shows where slabs are split and braken.

"Savan" and "Bhadon."—Flooring in fair order. The wall and whitewashed. All the stores in the mean work on this wall have be a taken at A store had been formed as the south side as shown in plan by building up mad walls between the columns. This room was in use as a gestion for the Commissariat contractor. A partian of the cornice has been damped on the east side; also one of the columns (marked on elevation) shows where a root date struck it.

The pavilion on the opposite side similar to the above, called "Bladen," of in use as a gyromaium. The flagged flooring has been taken up and plant flooring substituted. The wall at the lack has been whitewashed, a also the ceding. The stones from the mesaic work have all been removed.

## Zinat-ul-Masjid, Delhi.

The flooring of the open courtyand is all worn and evergrown with grass and jungle. The flooring mode the means in good order. The place has fall a in places. The recent in the west wall have been opened out, and open brinkworks put in for vanishion. A bean-to has been put up on the outside to protect the wall. The domes are overgrown with aim and pipul trees.

The buildings adjoining the mesque and intended for travellers are in a rained state.

## Kalan Masjid, Delhi.

Flooring broken up and waru, except in courts court. The platter has falled from the walls and coiling. A portion of walling has falled on the nurthers to ide menturing 10' × 10' × 2'. All the reofs are in a very unsafe condition, and wally much during the rame, through the outside platter having been destroy 1. The dome and vaulted roofs show large cracks. The whole roof is every own its vegetation.

## Fatehpuri Masjid, Delhi.

Flooring is all worn and broken up, but undergoing repairs. Intermed at supports have been put up (as shown in plan) to support the not which then a determinate of the control and only a coving resince. The present kinds over the minutes were put up recently in place of the original one. There are a number of pipal tree over the dome, which is now plants and whitewashed. It is said to have been originally covered with blue tilework.

## Purana Kila (Old Fort), near Delhi.

Onier couriyard overgrown with grass and jungle. Floors all broken up.

West wall.-Nich lettered on plan.

A .- To fair order, but very dirty. The ceiling shows a crack in the north-

B .- Damaged in places; otherwise in fair order, but requires cleaning up.

C.—Centre. The fringe of carred flowers along the arch broken away in part as shown in drawing; otherwise in fair order.

D —A good deal of the inlaid work damaged, particularly two patches measuring 1'  $\times$  0'  $\times$  3' and 1'  $\times$  5'  $\times$  3'.

E.—In good order, and seems to be in use for worship. There is a crack

End walls, north and south.—The middle arch in these walls show emcks; otherwise they are all right.

The eross such between C and D shows a gaping ernel; as marked in cross-

Front wall.—Archurays on the south of the centre opening cracked at crown; the others on to be sound. The pumpet wall over this wall repaired about 9 to a go. The lasts of the pillars at the south end so m to be crushing. The includes six in front is a good deal damaged. All the ceilings show large cracks I look ansafe.

Roof.—The gallery along the lask portion shows a crack in the vaulted of from end to end. The roof is all overgrown with grass and jungle.

# Humayun's Tomb (near Delhi).

West gain the recesses very dirty. The minarcts which existed on the west gain the cast side have fallen. A portion of the wall marked (a in plan. Remainder of the wall up to the north-west corner in toler-systion inside, but the back of the wall crumbling away. The bastion at the corner in rules.

In pretty fair order. The building A in the centre of this wall is dirty and in desergair. The building B at the north-mat corner is in rules.

The whole of this wall as well as the building C is in a ruined state.

South wall. Fallen, as shown in plan, to within 160 feet of the south gateway; a mainder in telerable order. A pertion was removed, as shown dotted in plan. The south gateway has been paired and converted into a rest-house for the police officers.

There are the remains of a small message as shown at (d). The bastion at the sub-west corner is in a rained state. The wall between this corner and the gateway has fallen as shown at (b) and (c).

Of the right wall and cist my very lette now remain. The gale is occurrence with regetat in. Only the potter between the west of read the touch is kept up; the other portion and letter out for editors in There is no old temb in the outh-out "second as bound in the distribution. The whole enclosure is in a neglected state, and overgrown with jungle. The walls round the compound are crambling away.

### Note on works in progress in the Punjab, dated 19th September 1882.

- I. The Report of the 18th May 1850 (see page xix) specifies what are the olivious remedies at Labore and Delhi, whilst the I jab Hopers. sula quent or re patalence with the Punjab Govminent and Inspector-General of Military Works, quoted in this Appendix, shows what recommended.
- 2. Sin then repairs have been commenced to Jahangir's tomb at Shuhdara, on which about the a fifth were expanded last year. The importance of this mountment will be uppreint from the engravings and chromo-lith graphs circulated with this volume. In a have been my salmed from drawings made in my Office, and are part of the , to an ental publications constituted by Government, and referred to in paragraph 71. 1 mg 12.
- 3. In July 1881, Sir Rabert Egyerine on ti ned require to the principal gateway of the Sami at Nur Mahal. I inspected Nur Maint. the in February last, and had the place surveyed on I plat eraphal. Heliogravure of the gateway are submitted with this. The runs are now in progres, but I have not yet inspected them,
- 4. A reference was unde to me by Government concerning a proposal to after and remove some of the old gatoways of Delhi gales Dellu, and I inspected them in July 1-51, and submitted a report advocating their being left intact. A subsequent decision of tip can at confirmed the view, and orders were present accordingly.
- . The recommendations offered by me in August 1881, in reference to mounments in the Poshawar dutriet (ar page cleaxy), resulted in some excutations. General Cunninghad subs direction of the operations. I visited the localities as well as - the in Empfasi, and addressed the following momerandum to the Punjab ti nemment --

M. Ancient Monnmente in the Perhanne District, dated 19th Jane 1889.

Buring my visit to Peshawar and the Eussiral district in February fast, I had an opportto of inspecting the very interesting runs which Graveal Cauningham had selected for or livestion.

2 Benching Peshawar es the 6th February, I had the advantage of conferring with a Conferry, the Commissioner, and learnt from him that Lieutemant Martin, a L. had just left I to middle with a company of espiror.

On the 9th Foltmary I accompanied Mr. Beckett, the Deputy C immeriance twho is a popular of with the Russian district), to Hats Marken and meeting Mr. Robb on the Commissioner, reserved the greatest assumes during my stay in Fe of all On the Harrison with Its V breary Mr. Robbinson and I cole out through the blanking with the feet of the following day i Bane, and ride round it worth alde of the Karumar full to Rabuball. At Sh we w plusty caterians by Muhamma I Turk Khan, and averyfed the principal councin his erd her elightly ra and cated off with a quant wood a railing from the At Fact also put up not village greet-home, a shell if much and thate, but profuse on the lacence, to which presults at the time of event.

(a) 14th F - y I would the Takht-i-liahl, and no the Rich rail to Id also at Mann's

p it rouds not later d'anight.

1 T following am the points which occurred to me at the various miares, mel who ! 1 1 not of the Punjals Govern and

of at Maddissparis. This institute has been fully described by Major-III and Spham a Volume V page 19. Arches legisal sare y of India. He thus meritime it :-

The greet to reprint if Amita is engraved in a large chapters was of trap well lying about the problem of the hill, with its western fane looking downwarfs the village of Shall at The greater priors of the inexception is on the eastern face of the rock hedding up the it but all the latter part which constants the same of the Greek large is on the western Ti mass of reck is 24 feet long and about let feet in height, with a greater thurburs 4 = 10 fec"

The inertial in in not in a great date of presentance, the rf of the rest is an expected to weather. The only way, in my equation, of presenting the record is from impresent the whole increbed orders.

To rillage healmen should be unale exponsible that no wilful datage is it to the in-ription

Reasons nous Nogram. The reliest forces on the hill I limited as yould be fruntier in the Khad Kheyl country. Both Law athal, G most Cunningham and its, I have described it; but no systematic curvey or constitution has been to to rough the fit of the carbon buildings. Chemical Consingham gives a rough plan at page 103, and a class of the fort at page 103 of Volume II, Archaeological Survey.

The tatches of shrubs and trees which canced the walls should be a moved, and the of the buildings carefully lable bare, as as to permit at an essenti plan laing made left by extension removal of cartie.

A few enriane executations have been made, and small fragment of broken statues. I contain the surface of the general close or of the sevents, and their resemblance to Greek as light.

The village of Negram was deserted at the time of any vialt, on secural of fight on the sections of the Kent Kheyle; but I understand that the first authorities good make meets with the tribe for the supply of labour for carnetation. It would like the topy the men a small daily would also to give rewards for remains excurated and deligation limited and unmatilated. Corn we like not try to prevent damage in twing last it was at the limitings. On completion of the work at the annual of the valuable atoms, and almost the tribe to prevent willful damage to the force.

Aureanur Hill. The mined memerine, which seem very nurserome along the range, are so in ... bl on the temp scarge of the hill that there sooms little to prof date.

I care the buildings and to see at a distance only, during the rate from Shown to Bake will.

Holebale.—This village is built on relies, and interesting discovere were in letter. As add Sa serit paperus he desired uncarried in a field was sent to Go and Pose amountation. Mr. Robinson the obtained an ancient possel and of famp. The city has not vield a good dual of interesting atter, but carrie can only be made volustarily by the for rewards, as the greater part of the rules are under the village bounds.

The Atts - Habe - This prominent hill, which more come fast for there it End appears about eight with from Manlan, and its came har, been described by the rat Connungia as in Volume V of the Arch described Survey, and by Dr. Bellew in his the rate of the manual Survey, and by Dr. Bellew in his the rate of the second Survey.

The rules are very extensive and most interesting; the disposition of the manustrace decidings and selectly transifrom the up or points of the Takint-Alahi rungs be a surprised in the evident of the classic base in a disping has been interested in the manustration of the country and state of the country and topos and to the country manuscript in vertices and state of the country and rest the masses in I try walls.

The cole thing to be then at present is, in my opinion, to probabil irregular and an amount of the market in have the place witched by the heading a of the neighbouring village.

Charge black. Close to the junction of the Swat with the Kabel river, and the leading of the former etream, is a large fort called locally the Rule II or. General Council I differ the bendity as the position of Puskalavati mentioned in the 5th century 1.11. He as The me, and directed excavations is the fort and in the stands for the Thirty of the way telently adapted by the Pathams. Too remains raised to be a four y purpose of conservations. In neumant Martin, who was been at work with a field suppose, moral the principal frame of the complete and on a principal frame of a lient portery builting from an a four all. He also found in a principal result of a lient portery builting from an a four all. He also found in as observed from the Pashawar district to the Lahara Martin was unaller and must imperfect. They op a lite most a unity from an architectured point of view. The a remarkable acculpture shown to me y I beaund Martin was a small stan centaur or hamma-handed here.

B. The conclusions I arrived at during this right are no fell was t-

There are objections to the appropriate of Pa han support in making excavations

(a) The ir religion moneyee them to defe figure areness

(4) Their sourced persons on the inters which the of recommending takes in
(r) The presence of small landing of subbres at the persons of small landing of subbres at the persons of the front their in difficulties with the British, easily brought of mt by a single shot.

the land of a fittee of the off the short many of exacting the preservation it to the put ple thousand res in the Kall I ruller is to culiet the put ple thousand res in the a remarks at the interesting of the demonstrated sculptures or other antiquities.

The use of a state of the other

f. b) f' nea nof a roll de woul of the arrivation, to be applied in I so tind An annual crast of about the Lines would, I think, produce comiderglade people

a. Lo of the light with the description particular localities, sieb in remain . by and one of the law promption

to with a property by a me and to send a temperaturble parameter with 

This the age that the country would be likely to yield radmit discoveries, and we have been declared to be a first to the likely to yield radmit discoveries, and we to be a first to the last to take in present on a final time in the district.

I the last the age of the country districts the reserved a thurst examine in parts.

A so a set he seem on the probable of a per l'expression.

t mine that for he so o t district, I resemble that the headmen of a. I fur a last native be made . . . the fee preventing damage ; and the rules at damak The Hale of the last the but name the , and identical ar particularly worthy desertedly.

S ni repairs and improvement have a outly been carried at in the Deiln Fort under the Military Works Branch. Dall I'm Captain Turner, E.S., the Executive Engineer, he alcured as I renovated the two parition referred to at page axy (Unival. 1. Il Superne ad a l'agra a, I have prepared a design for a lab my to to over the D lin Oute at the Fort. At present the industry is of wood all man tel no, and has monitor ill with the surroundings

# Report on Monuments in the North-Western Provinces and Oudh together with a Note on works undertaken.

Note on Allahabad, Benarcs, and Jaunpur, dated 11th January 1881.

- 1. Raddhirt last in the Allahabed Fort.—The A ske Laten the Allahab I F ra in front of the Ares and is the of the most interesting of its kind. It was recent I in 1557, having been found lying on the grand. The Aseka inscription of a date 240 B C. Those of Samula (Inpta date A.D. 350, 400, and there is a Point inscription of Jahangir's (A.D. 1607) from which it appears to have be recent to commemorate the nor ssien of that Emperor. The base is 7 feet 7 in he, the shaft 55 foet, and the diameter at the top 2 feet 2 inches; at the local entire to the Captain Smith, who re-creeted the pillar in 1837, buth up a pole 1, and translations of the inscription have been printed on paper glazed and ditted into the base. The writing is, however, almost illegable from damp and vegetation which has got behind the sheets of grae, and the instance inight be replaced with advertage by some notice printed in connected in metal.
- 2. Alber's Island. All baland.—Alber's pulses buildings in the Fort when almost entropy obliterated. These that remain have been adapted to the purposes of the around; and the beautiful hall drawn by banuali and represented in Forgit on's volume on Indian Archite ture, page 583, has been so built up, our loosed and furnached with English doors and windows as to appear to be a subtract contemperate a with the Ellenborough barracks outside the architecture. The interior columns of the hall are winter had and enchood by furtite to make to be a substract to be a smooth to a condition of the hall are winter had and enchood by furtite to make to be a smooth to be
- 3. Akshay-Bat is the Ulaba of Frt.—The scalled underground temples agree the arsen I (which is in reality only a building a ribed up by accumulated delect) the temple described by the Chinestraveller flown Theory [A.D. 637). Originally, we General Commingham, both it and temple must have been on the natural ground level. The upper perticulates long upon the recoverly and the only near to the "Akshay-Bat" or "under ying Banian Tree," now are itally to by a flight of steps which he is down to a square pulsared courtyard. This we open to the sky, but is now the 1-to secure my tery and darkness. Heren The describes the temple as being in the mild to of the city of Prayaga Allaha I, which was attented at the couldness of the Junion and Gangre, so that the Fet of Hab has erected by Akhar [A.D. 1972] surremeded the ancient building and probably we the mean of a cring to from being swipt away like all other evaluation of the fill city.
- 4. Kar re Ray 6, Allakahad.—The gardens are near the railway staten. The tombs of Sultan Khuem, the ill-fated son of Jahangir, of Khuem's Shor and of his ster are mental personal, but require (when it can be afforded) in to there are repair. The garden are well kept up 7 they were laid out by Jahansir, and are surrounded by a masoury wall.
- is. R. 144 is Top at Sara the Revaces.—(Dat about 6th Century A.D.)—The monum at has lead described by numerous per ple and lead to the transfer of Cunningham write about it at length in his Vol. 1. Archivel vical Report, presented, Archivel vical Report, presented, Archivel vical Report, presented, Archivel vical Report, presented and illustrates it in his Entering Vicalian.

- 1 is in a very miners condition. One side of the semiptored from in falling, and he been recently banked up with earth. A shing, haven e, an be a repertorly mutil the unsafe may ary is entirely rebuilt; and this chould be a set percent further damage.
- Resores City. My visit was too short to permit of any merful sommetion of the buildings in the city, but a large number of ghats and buildings to be too buildings in the city, but a large number of ghats and buildings to be too built on the river bank, and I propose to make a detailed report, as a great deal may be done in the way of improvement. For instance, one large ghat was an search by the Mahamja Samdia, but it has sunk and become utterly unsightly, of disturbed by an earthquake. This sub-blence is no doubt due to had founds to a.
- 7. Januare.—The country around Januari became an independent Moslem previous in 1897 A.D., and to transined until incorporated by Akkar in the Mogul Feyers. The January Rulers adorned their capital with a series of buildings at a distinct Pathan character unsurpassed in India for magnificence and for individuality of treatment (see Fergusson's History of Leuran Architecture, chapter IV)
- R. Januar Fact Magne.—The awayes in the Fort was creeted in A.D. 1305 out of the materials of a Hindu building. In front of the masque not mentioned by heggs son to a stone lit or column about 40 feet high, with 3 bands of Arabic in reprint half way up. The date of the inveription is A.H. 501. The front row of pill are in the misques are eculptured, but these in rear are quite plain.

The central archway has an inscription over it, and so has the interior "meliral " or niche. The mesque is neglected and in disrepair.

- D. Janoper Fet.—The Fett itself is said to have been built by Firoz Shah. It is now in ruins. The two entrance gates are massive and ornate, and are occupied by poice. The first gate has carred spandrels and niches inhably with tolored tiles in self we said blu. The second gate has some delicate funds of sculpture. Both are in the Janupur Pathan style, and worthy of preservation and illustration.
- A.D. 1619 and of the columns and materials of a Hindu temple, and is a grand to it ing consisting of a pillared courtyard 220 fort by 214 feet. The east and is rained, remired a pillared courtyard 220 fort by 214 feet. The east and is rained, remired are in program to the north and such gateways. The morth gate been along a entirely renewed, but not well. In front of the mosque itself is a set of gate pyramid, which appears to have supplied the place of a minaret. The interior of the mosque is what washed, but it proportions and currebments in stone and marble are very commetable. Flanking the sanctuary of the mosque on each only are two vanited halls (0 × 00 feet. The building is being repaired by Manivi A lai Majid, but the old lines are not followed sufficiently excefully.
- II. Maljid, Jansyne.—The Atala Marjid to a most beautiful mosque it reted in the city. The colonnade of the quadrangle is built up of Hindu colonna, while the pateways and the façade of the sanctuary to the west, with its the "propylete" or pyramid gates, are all of very businesses and ornate Same all architecture. The interior of the sanctuary has a very rightly curved dome, but it is white washed and exceedingly dirty. The colonnades are used for all purpose by the natives of the city, and are also very dirty; vegetation requires removing from the roofs. Repairs are executed by the Muhammadans, and are in the charge of Maulvi Abdul Majid; but the work requires to be undertaken with more attention to correctness of detail and with greater vigore.

12. Itall Darware Manjid, Ja upor.—The Lail Darware mosque is two miles ontside the city of Jampson. It is similar in exple to the two mesques above described, but smaller. It is in considerable disrepair, and the quadrangle overgreen with grass. Flanking the central canctury on each side are raised gallers one of the green work. These were no doubt constructed for partials wenned, but may a mad as common habitations. The place should at all avonts be preserved from distance vegetation.

The Jaunpur architecture has been illustrated to a considerable extent by Mr. Heath, Executive Engineer of the Archaelegical Division of the North-Western Provinces, and his drawings should be published for the benefit of miss are a schools of art throughout India.

Letter from Carriex H. H. Cole, R.R., Curator of Anglett Monuments in India, in the Secretary of the Government, Narth-Western Provinces and Could, Patidio Works Department, dated in Del August 1931.

I have the honour to acknowledge the receipt of your letter No. (2-215B-1, of 1851, a meaning the Sarnath Topo at Benares, and in uply to forward of a Report on Allahabed, Benare and Jampur, in which I have expressed opinion that the loose massury in the Sarnath Tops should be rebuilt. By the I mean that, whore the stonework has been displaced or has bulged, it should taken down and country replaced, and that when necessary for security plane massoury blocks be inserted to replace what has fallen out and been lost. No new curved work should be done. The apper part of the stone majority plane has laid in coment and secured, as far as possible, against the tion of rain; but the manual of brick incomery which surmounts the tope should be simply the of creepers and vegetation.

2. I do not think that these measures about east anything like Rs. II, not and if done by daily labour under careful supervision, I am of opinion that a sum of about Rs 2,000 would go far to resome the taps in the manaer I have upon I I qualer tand that Mr. Heath has been lately to Saznath, and I remined that he has naked to furnish an estimate for the work.

Letter from Currain H. H. Duin, R.E. Cornine of Ancient Monuments by It 15, to the the Genument, North-Wastern Provinces and Onlik, In the Works Report 1, fished to the 4th Angust 1851.

I have the homour to report that I visited the Agra Monnments on the 1 the April hat, in company with Mr. Lawrence, the Collector of Agra and Mr. He to Executive Engineer of the Archaelege I Drys on. I again with I Agra on the 17th and the July has, and hege to offer the following auggrestions or grade a the buildings in Mr. Heath's charge. The repairs and restoration of those is the fact are a city complete, and I strongle recommend that, when complete, they be hand I over in the Collector of outled y and keeping in good order. The did to a different and a northern continuous much more likely on that account to take an interest in historial and action monute and have also be posted out in Appendix II, paragraph 13, for a part dated lifth May, copy onclosed, there hould be no difficulty about this, and I consider the matter of very great importance.

2. In Ar mixt of the part, pure I have assumed a that the Someth Care by a up in the Deman-Lam, where they were formely when he had become a lambar urr.

The gat hould be e derel a series as possible, closed, and end of a late to a total and from dirt and due. I would suggest that Mr II aid to a feel to furn he in estimate for this.

- 8. Iron go lors are dill visible in the crefs of both the Diwan-i-kha and a k. Mahal, and are very unsightly objects, ch. hug with the beautiful marble of our in of the buildings. I recommend that an estimate for restoring the lings be prepared.
- The Jalm giri Mahal, which has been so succe afully renovated is that at the position which rise above the rank. One of the a has been replied. The and one is such ad, and is used use a dwelling by the Provost Sergeant, and it is ablifuld be cleared and just in report.
- The rooms between the Anguri Bagh and the Jahangiri Mahal, formerly a lastle on on, in the first, require spening out and heaving so they were recently.
- of I entire to agree that Mr. Heath may be authorized to place emphasized but they are required, so that then may be a record of high of that I done in on him.
- 7. As results Fatchpur-Sikri, I would recommend that the Birbal house, Akt r's ith , and Miriam's house is chard, and that a suitable did bungalow built. When at lat house Sikri with Mr. Lawrence and Mr. Heath, the site two it the 11 mint and the Divant-ion seemed to us in every way suitable for the purpose, and I one, at that an til air be framed. At present the use of the three building prevents their being used the appurturance in public from a date longalow,—so khouse, checks, doors, and wholey a few doors and uniformal and constitution of the appearance of the buildings. A really confortable and constitution of khouse, and endow, See, do not be any use in improve the appearance of the buildings. A really confortable and constitution of khouse, have an order to occupy the Birbal house, have very limited are ammedded in faktors office, and many people who would like to stay a few days, drive out from Agra and last the same day.
- 8. The central archives of the great meson at Fatchpur-Sikri is most in ghtly with whitewesh, and I recommend it removal, and that the paintings is the wills have far as patche rost and
- p. Some i the column and columnal of the he important brills at he of Stribard been proposed up with me one butto es &c., and who the a sking to be defined there is the place, houghly picture in anther thin may expect the first with next doing and pointing.
- 10. The ground round the an t mosque have be greatly suproved by Mr. Laverer, who has chared decreasing, planted a number of to med to the sipped trend, which lands the victor under the Grand Bula de Drive the stories of which many visit on farmer day control to see. Connect if the keeping of the grounds, the question of system tically keeping down useds, energies, and veg tation from the masonry countried and buildings was

discussed by Mr. Lawrence, Mr. Heath and myelf. We agreed that the 1 st way would be to make a complete clearance after every rains. A mann and main could do the work in a few days.

- 11. The buildings at Sikundra are vestly improved by the laying out of the grounds and their conversion by Mr. Lawrence from a wildern it of jungle into a standy park. It would be advisable if something could be done by varnishing a preserve the pointed work inside Aktar's Tumb, and details of the varieties of ornament should be drawn and colored.
- I also recommend that the finials which originally crowned the krosqu on the entrance gate be renewed.
- 12. The Taj Gardens are in splendid condition, and show off the marble to full advantage. Mr. Lawrence has removed the nursum from the first to the Taj gateway, and the architectural and historic speculoms are better and moften seen. He has also taken over charge of the hudding from Mr. Heath, and has put in several finishing touches by real vising the matriality door opining in the tumb, and by removing ansightly doors from various parts of the buildings.
- 13. The Fatchpur-ki-Masjid near the Taj is in need of repair, and is an much a part of the whole group of building, that to withhold the necessary measures would be a mistake, and I therefore suggest that the necessary estimated to:

Annual Report by Mr. W. F. Hearn, En utilive linguiser, of work done during 1851-92 in the Archive logical Division, North-Western Provinces and Onlin.

### TAJ, AGRA.

- 1. Remaring cost and west walls with Boorjs.—Expenditure Rs. 15,832 during year, total to end of year Rs. 25,803. The work done during the year compating partial dismantling of the his present the south-west and south-west corners of the end sure and rebuilding the same. The south-west knowns has been completed, the upper story and dome being new work.
- 2. The last No. 2 and 3. Toj Sec 1.—Tomb No. 3.—Expenditure for year Rs. 6,395. The fallon vermidals (bout 1 of whole) has been restored, done required, and all work necessary for the preservation of the tomb has been done. Inlaying and missing marble unide building has not been done.
- 3. Tomb No. 2.—Expenditure Rs. 2,877. Work done same as in No. 3. Cleaning and repairing enterior of Toj Gateway.—Expenditure for year R. 1,970. Work done comprised the cleaning and recoloring of the whole of the interior, justing in a new plinth, and general repairs to stone and plaster work and remaining inlaying.

Rs. 324 was spent on the maintenance of the Auguri Hagh, Agra Fort.

Hs. 490 spent on require to masonry in different huiblings at Fatchpur-Sikn

Its. \$71 spent on requiring the Nagina Marjid, Fatchpur-Sikri, and

Ra. 758 ou different patty works under Rs. 200 each.

Eripset from a letter from the Government, North-Western Provinces and Coath, Politic Works for mant, to Carrate H. H. Cotz, E.E., Curator of Assistant Monaments in India, stated 23rd J

Under these circumstances all projects and proposis connected with a his liginal questions in the North-Western Provinces and thulb will in future be
mitted to you by the Executive Engineer, Archaele each Division, for your consideration and suggestions before being finally dealt with by this Givernment in
the Public Works Department. This procedure does not contemplate any counttion on your part with subsequent execution of the works, which will, as he referenbe supervised by the Superintending Engineer, 1st Circle, Provincial Works. But
this Government would invite your inspection of the wokes in prograwhene
convenient, and the completion report will be sent to you.

# Note on Works executed in the North-Western Provinces, dated 20th September 1882.

1 The great bulk of the work done at Agm from 1875 to 1879 has been reported on in Appendix H i, page xxiv.

2. Since then the finishing touches have but I ven to the hundred at the Taj and in the Fort. There is still some work to be done at Pat hour-Sikri, where I hope a suitable hungalow will be built in again to free the Birbal Hence, Miriam Home and Akb r's Office, which are a present occupied by

ray Il rand district office .

- At Sika dra the finals to the knownes on the various structures require to be removed. A most curious discovery has been made with reference to this building. Ak
  1 of tembers to in an underground vault, a soon beamberon is on the upper
  nual termous but Mr. He the has lately discovered an intermediate chamber, in which there is a third temberone surrounded with massive square columns. This is the termore had been rais to better the architectural appearance of the building.
- F. The pointed interiors at the tembs of Akhar and Einud-nd-Dowlah sadly commen pre-acceptant, and experiments are about to be made. Some colored drawings to the inter building accompany this report.
- 6. The Fatelepur-ki-Masjid, which is at Taj Gauj, has been pronounced by Mr. Healt to be beyond repair; but I hope he will exercise his ingenuity and find a remarkle means of keeping it from tumbling to rain.
- 6. A reference has been made by the Inspector General of Military Works as to any objection to the demolition of the Dansa-ki-Haweli in the Agra Fort to make an for now quarters, and I have submitted a plan thowing the pertions of the building that are architecturally interesting and worth preserving. I regret to have to state that up to the present one of two handsome in I samistone paythons anking the Jahangir Mahal in the Agra Fort is still enclosed and walled up as a quarter for the Property Separat. Some manner will, I hope, be found to find a more made residence, and that the building will be cleared and restored.
- 7. At Jampur, the Jama Marjid repairs have reverted to the Mussalman emmunity, and been taken out of Mr. Heath's hands. This will certainly not conditate to produce the product of the work.
- S. The dd Buddhist T point Surnath, user Remares, is still neglected; but I tups that the nextful preservative measures will before long be ordered by the L remant-Governor, Sir Alfred Lyull.

### V

## Note on Monuments in the Central Provinces, dated 21st September 1882.

I have unfortunately been hitherto smalle to visit any buildings in the Contral Provinces, but I ventured to point out to the Chief Commissioner, in letter dated the 20th July 1851, that I thought the remains of buildings at Baragis I and at Mandhata to be worthy of more than ordinary remedies, and I hepe to be able this season to visit and inspect them.

### W

### Note on the Monuments in Maisur.

I have not be uto any place in Maisur as yet, but I learn from Colonel Scaler, u.e., who was at one time in charge of the Public Works Department in Maler, that in his time repairs were executed to the great temple at Hallahid, to the B rour temple, and to the mail temple of Semanthair.

2. I hope in counse of time to visit these and other monuments of interesting the Maharajah's territories.

## X

Report on Monuments in the territory of H. H. the Nizam of Halderabad, together with a Note on Works undertaken.

# Note on Kalburgalt, dated 25th June 1881.

My stay in March has at this met interesting place was rande, i doubly agreeable through the court in of the Nizaur's officers, the Sullar Talukdar, and Mr. N. W. Woods, the Executive Engager of Kalburgah.

2. My first visit was to the "Randa Nawaa," the temb of a saint who can to Kalburgah in the renge of Preux Shah, A.D. 1432. It is about 11 mile north-cust of the Nizmo's lamgalow, and is ranched by a road produce the salarb How hours. On ascending some stops into an enchance, the temb pper in front. It is a plain dome about 50 feet high. The inner shrine of the is of reposition of other work, ornamental with circular modallions. Near the material is that of his grands in, and south of the enclosure to another, of the collection. All three hilters of each required.

Worthy of Illustration. Larie g d pro times and of his in-Unfortunately each year add a cent of whitewash to the immourty, and the liptures are guiting more and more obliterated. The endowments come to all a Re 50,000, and the set of removing the while each could will be afford by the Trustees.

- 3. South of the tomb cooksure is a hand one "Nakarkhanah," and in the story below a "caravansorai," with a "Madessah" and a mesque on the right, all it stales our earthy of Bastration. The serai has a huge archivay, and the columns of the buildings are of musual deagn.
- the father Bahmani Kings.—There are about one-third of a mile of the Bahmani Kings.—There are about one-third of a mile of the Banda Nawar." The principal building has two domes, and is now used as a Revenue Court. The discrease have some nice incised plaster and some wark. The exterior arches of the walls are filled with hold geometric traceries. The interior of the building has some extremely good arched work in plaster, but the dome is black with age, anole, and hats.

Resembe records in one building.

5. Under one of the two domes is a black tombstone. The office records are stored here.

- 6. Another tomb is in use as a Judicial Court, others are occupied as offices by folice, guards, treasury, &c. The building adapted for the latter has some good arch-work in the dame.
  - 7. l'ogetation has attacked many of the dames and anght to be destroyed.

    Worth drawing.

    The buildings are worth preserving and drawing.
- 8. The Great Mosque.—This remarkable structure dates from the 13th court, and was exceed with other buildings at the time that Kallungah was the pital of the Decean. It stands in the fact, which is a massive stronghold of that partial, and measures about 216 feet east and west, and 176 feet morth and south. It popularity is that the whole area is domed over, the light and air being admitted this up the ranges of arches to the north, south, and east. The merit of this system is that the massage is at all times in shad and protected from the sun. Whether the popular construction arose out of the form of some previously existing Handu editive is a question. Mr. Eastwick calls it "the Temple of Raja Kalchand, which the King Gaugu Balmanh converted into a mesque." He this as it may, the fact remains that, whereas the early Indian mesques were open courtyand surrounded by colornades, this is a solitary instance of the whole area being under cover, and as such has a special architectural value of its own.
- Only one of them has fallen and might worthily be craceed.

  Four lights have been introduced in each of the small dames. The building was moverapied during my visit—in 1575 it was most for famine relief purposes—now it is dirty and neglected, a portion of the archen bring tilled with loose stone. I was informed that it is letended to open out a relway through the fort communicating direct with the great mosque. This would be a great improvement, and the opportunity might then be taken of tryatring and cleaning out the building.
- 10. On a hastion, to feet high, in the fort is a large gan of coiled steel with a cimutal bars in the centre. It measures 26 feet long, 7 feet 6 inches round at the breach, and 6 feet at the mucale. The bare is 11 inches in diameter. The gan should be preserved in situ.

<sup>.</sup> This seems doubtful, as the architecture is purely Modern.

11. The Jama Masjid.—Near the Shah Bazar is a vost building—the Jama Masjid—with square column, pointed arches and small domes, surround it by a quadrangle. The Nizam's Government have required it,

Lotter from Carrain H. H. Gerr, R.E., Curator of Ancient Monuments in India, to the Her lant, Hydralmi, dated fromta, 11th September 1882.

There the honour to acknowledge the receipt of your No. 135-1882-83, forwarding a communication from His Highnes the Nizam's Minuter, dated 30th March 1882, on the subject of repairs to the ancient buildings at Kalburgah.

- 2. Referring to the Rozz of Khwaja Banda Nawaz, the proposal to remothe several coats of annual whitewashing accumulated on the walls is in a very way desirable; but I strongly deprecate the subsequent whitewashing of the walls and picking out the annumental sculpture in black. All amounts were aboutly, I submit, be left plain without any course of whitewash or colour. This remark applies also to the toules of the Hahmaul Knags, the store was an effective aboutly, I think, be left clam and uncovered by any miditional coatings.
- 3. In regard to the large masoury mosque in the Port, the rebailding the fallen a lumn is a very proper step towards maintaining this interesting alife; but I would mention that any substantial or solid closing in of the various etc. It is find easily would detract from its lands-one appearance. That portion of the califice which is not second for praying purposes could be exceeded for one as school, &c., and the accompanying by thoughout a magnetion for an enclosure, according to the precedents of Moslem architecture. Hoping to hear further of the steps taken at Kalburgah for the maintenant of these valuable monuments, &c.

# Note on Works undertaken, dated 21st September 1881.

The foregoing explains what has been recommended and contemplated for Kulburgah. I hope to inspect the works thring progress.

- 2. In December 1881 His Highmes the Nizzm issued only to provide doorways to certain of the caves at Ajunta, and I understand that this kin made remedy has been of considerable benefit to the caves and the paintings which we their ceilings and walls.
- 3. I was accordingly authorised in July has to express the entisfiction of the Governor General in Conneil for communication by the Resident at Hyderabad to the Covernment of His Highness for the preservation of these most interesting monuments.

### SECOND REPORT

or THE

LOS MUNICIPALITY

### CURATOR OF ANCIENT MONUMENTS IN INDIA

FOR THE YEAR 1882-82.

1. Soon after my teturn to head-quarters from tour early Remain to in April 1882, examinations for promotion prevented my get-bad-quarting fairly to work until the 7th June.

2. The party of draftsmen who had proceeded to Madras Sample on the 12th December 1882, remained in that presidency up Madras to the end of July. Very complete surveys were made of the Surangam and Jambuishuar temples at Trichinopoly of the great temple at Madura, and of the temple at Ramesseram in Pauniben. These are remarkable examples of Dravidian architecture, but being in the possession of natives, the only hope of influencing the trustees charged with administering the temple endowments is by detailed specifications of the requisite repairs, illustrated by plans and drawings.

3. In July and August 1882, I visited Delhi, Udaipur, Nagda, Tong darion Eklingji, Chittore, Indore, Ajmir, Mount Abu, Jaipur, and the salm.

returned to Simla on the 22nd of August.

4. Until November my office continued to be engaged in Preparat fairing out field surveys, and the following drawings have of plans and been prepared since April 1882 :-

Besides these I have furnished, at the request of Colonel Gordon Young, the Commissioner, a design for adding shops round the enclosure of the Fatehpuri Masjid at Delhi; by this means the mosque revenues are capable of increase and of contributing to the means for properly maintaining the

Fatebouri Masjid, Delhi,

building, which was bought by Government from a Hindu and given back to the Muhammadaus of the city at the time of the Delhi Assemblage. I also, at the request of the Military Works Department, prepared a design for a balcony in front of officers' quarters in the upper part of the Lahore gate of Labore gute, the Delhi fort, in harmony with the architectural style of the Delhi fort. surroundings. Lieutenant-Colonel Steel asked me to supply Aleir Tislea design for a telegraph office at Ajmir to harmonise with graph Office. the native buildings of the city, and I gave a plan which is approved. I have also assisted Major Bisset, R.E., Manager of the Rajputana State Railway, with architectural sug-April Rail-

gestions for the Central Railway Offices at Ajmir.

5. The following is a detail of my tour from November Tous 1882 to April 1883. On the 7th November 1 left Simla, April 1882-82. visited Ajmir on the 9th and inspected the pavilion in Ajmir. the Daolat Bagh with Mr. Brassington, Executive Engineer in charge of the repairs, for which a sum of Rs. 2,000 had been allotted from the Government of India grant. On the 11th November I made a hurried survey of the old Portuguese ruins in the Bassein Fort near Bombay. I reached Bassein. Madras on the 14th and arrived at Masulipatam on the 19th of the month. I then proceeded to Amravati on the Kistna Amment river and carefully investigated the condition of the great Buddhist Tope. My report, dated 25th November, has been submitted to the Madras Government, also to the Government of India, vide my letter No. 620 of the 27th February 1883. I returned to Madras on the 30th November and had an interview with His Excellency the Governor on the subject of conserving the Amravati marbles in situ. I also succeeded in arranging with the Madras Government for the special employment of Mr. Black, Assistant Engineer. Appointment returned to Bombay on the 5th of December and conferred of Mr. Rt. with the Bombay Government on the subject of repairs to Basener and monuments at Ahmedahad and Bijapur, Leaving Bomhay Ahmedahad on the 7th December, I proceeded to Sanchi in Bhopal and sanche started Major Keith on repairs to the great Buddhist Tope at that place. Heft Sanchi on the 12th December and went to Mandhatta on the Narbadda, where there are many remark- standards. able Hindu monuments well worthy of record and preservation. Allahabad was next visited on the 18th December in order to submit some recommendation to His Honour the Licutenant-Governor for work in the Archaeological Division, North-Western Provinces. I then returned to Simla and started off a party of draftsmen to the Central Provinces

and Rajputana. On the 6th January 1883, I left Simla for

Peshawar and arranged with the Commissioner for some excavations in the Eusofzai district. I next visited Lahore PerLamat. Lahore Delha and up to the 26th was engaged with Lieutenant Abhott, R.E., in going over the various buildings of interest at Lahore. and Juliamier From the 27th to the 29th we were engaged at Delhi, and up to the 31st at and near Jullunder. I visited Jaipur on the 14th-15th February, and saw the Resident about repairs to Jaipur. Importunt in the Amber Palace. Reaching Agra on the 16th, I inspected the N. W. P. the buildings in the charge of Mr. Heath, Executive Engineer of the Archieological Division, North-Western Provinces, and went with him to Fatchpur-Sikri, to Sikandra, to Muttra, to Bindrabun, to Aligarh, to Budaon, and to Jaunpur. The latter place I left on the 5th March and proceeded to Sasaram in Bengal in order to examine the work at Shir Shah's tomb II col. progressing under Mr. Beglar, Executive Engineer of the Ancient Monuments Division. Leaving Sasaram on the Sth March, I revisited Sanchi in Rhopal on the 12th to 14th in order Slocki to inspect the progress of Major Keith's operations at the Great Tope. I next proceeded to Rijapur in Bombay to Mispur. see some repairs to the architectural buildings of that place under the Executive Engineer, Mr. Reinold. Leaving Bijapur on the 20th, I revisited Hoti Mardan, where I arrived on the 28th. After inspecting the excavations at Sanghao, I made Prohawer a list of the numerous sculptures that had been unearthed and collected. Leaving Hoti Mardan on the 5th April, I reached Labore the following day, and had an interview with His Honour the Lieutenant-Governor on the 7th, in order to report to him what had been done, and to ascertain his views in regard to this year's work at Lahore and Delhi. I returned to head-quarters on the 8th April 1883. Pelsta W The details of the year's work are specified in the Appen-

Last rif smoonmacrat &

headquestros.

> dices. 6. Appendix A, gives a revised and augmented list of the most important known monuments in the various administrative areas. Out of the 50 buildings in the Bengal list, I have visited 2. Of 107 monuments in the Punjab list, I have examined 31. Of the 15 in Kashmir, I visited to in 1868. Of the 37 in the Rajputana list, I have seen 16. Central India shows a list of 20 minuments, of which I have seen S. Haiderabad has 14 entries, one of which I know, Of Maisur with its Sentries, Burma with its 7 untries, Nepal with 3, Assam with 4. I know nothing whatever. Out of the 20 buildings in the Madras list I have been to 12. Of the 42 in the Bombay list I have seen 17. This makes in all 428 entries, of which I have personal knowledge of 121.

7. Of the 428 monuments enumerated in these imperfect Confirments schedules, 127 are in Native States or in charge of natives, and repairs would have to be executed at the expense of the local Chiefs or endowments. The remainder, 301, can only be repaired at the charge of Government or with the assistance of grants-in-aid.

8. The survey and examination of buildings in Rajputana

will take several years to complete.

9. Up to date, 768 rough field plans and drawings have have been made by my establishment; 437 of these have been drawings faired out, producing 140 finished sheets; and 127 out of these 437 are in course of reproduction, producing 40 plates for publication. It is desirable to publish these and make use of all available material.

no. Appendix B, gives a provisional list of British monu-tien a ments worthy of preservation on account of their public inte-

11. Appendix C, is a list (under revision) of works bearing Wixes of

on Indian and Oriental architecture, archaeology, and art.

12. Appendix D, details the progress of work in the Magica Madras Presidency, to which an important impulse has been given by the cultivated taste of the Governor, Mr. Grant Duff, as well as by the tour which took him in July 1882 to many places of interest. My inspection of the Buddhist Tope at Amravati in November 1882 resulted in the report quoted at length in paragraph 6. The temporary appointment of Mr. H. Black in December 1882 as Assistant Engineer for Monumental Preservation provided the means of suitably applying the grant of Rs. 5,000 contributed in 1882-83 out of imperial funds to some preliminary operations at Bijanagar, which are described at page lxxxvi. Up to the end of March, Mr. Black had succeeded in clearing away jungle and overgrowth from tro buildings, in examining the great Vittala Swami temples, also in the removal of débris, and modern additions, previous to framing an estimate for structural repairs.

I have since seen, commented on, and recommended Mr. Black's estimates for Bijanagar and the Seven Pagodas, and a contribution of Rs. 10,000 has been made out of the funds provided by the Supreme Government during the year 1883-84.

Mr. Black has recently been at the Seven Pagodas, where, as suggested by me, he cleared away the sand from the ancient Shore or Alaiva temple, and (as I expected) revealed the walls of a courtyard to the east, thus bringing to light a most interesting adjunct to the building, which appears to be unique in its architectural treatment

Laby.

13. Appendix E, details the various steps taken in the Bombay Presidency. Early last year I invited the consideration of the Bombay Government to the question of how far monuments of interest and beauty should be converted for use as offices, dwellings, stores, or other purposes of Government. There can be no possible harm in using dismantled shells of buildings such as exist in the citadel at Bijapur, neither is there any objection to putting native structures of interest to the same uses as those for which they were originally erected, but it is incongruous to continue the use of the beautiful mosque of Sidi Syad in the Bhaddar at Ahmedabad as a district court-house for the manulatdar; whilst the recent conversion of the handsome mosque of Mahmud's tomb at Bijapur into a travellers' rest-house discourages national appreciation of ancient examples of native architecture.

This question is so important that I strongly commend to Government the advisability of laying down some general

principles.

I have been in frequent correspondence with the Bombay Government on the subject of appointing a special officer to execute repairs to ancient monuments. The Executive Engineer of Almedabad, in submitting various estimates for repairs in December 1882, observes that "the estimates have been framed as well as they could be, but they cannot be considered satisfactory, as this Department is not trained to this kind of work." In regard to certain estimates for Bijapur, the Superintending Engineer writes in October 1882 that "it is very doubtful, even if funds should be available, whether the Executive Engineer will be able profitably to undertake any more work than he has now in hand." The Collector of Ahmedahad in May 1883 supported my recommendation for a special officer to have charge of repairs, and my proposal for the provisional appointment of a young Assistant Engineer to prepare projects in consultation with me has been submitted to the Bombay Government.

As regards localities other than Ahmedabad and Bijapur, sundry beneficial remedies have been applied to the Karli caves, where the natives had made an objectionably free use of paint for religious festivals; to the deserted temple as Ambernath, the repairs to which I have not yet seen; and an estimate is under preparation for carrying out the recommendations submitted for the buildings in the old Portuguese fort

of Bassein.

14. Appendix F, refers to works in progress in Bengal. Mr. Beglar, formerly one of Major-General Cunningham's

Assistants in the Archaeological Survey, has since 1880 been engaged as Executive Engineer in repairing the great Budillust temple at Buddha Gaya. I have not been concerned in this work, which was initiated (before the creation of my office) in consultation with General Cunningham. I have, however, submitted some recommendations for disposing of the numerous fragments of sculpture which abound at the temple, also for providing permanent custody. Mr. Beglar early in 1882 became engaged in repairs to Shir Shah's tomb at Sasaram in the Shahabad district. I had no opportunity of perusing the specification until the work had been begun, and repairs of questionable taste had been completed when I first saw the building early in March last. I have since submitted recommendations and have generally advised the Bengal Government to take in hand the best manuments of their class in the province, and, as usual in similar cases, to direct the Executive Engineer to prepare his projects in consultation with me. A rough estimate for dealing with Man Singh's palace buildings at Rohtas had been prepared by Mr. Beglar, but I have pointed out that the old ruins at Gaur are generally held to be of greater importance, and should be given precedence over others. General Cunningham agrees with me in this opinion.

Major Keith was appointed Assistant to me on the 14th October 1882. He had been previously engaged under the Agent to the Governor General at Fortress Gwalior, where some important buildings have been repaired at my recommendation. His work at Sanchi is of still greater importance. The Buddhist remains are the most imposing of their class in India and the most complete. The operations described commenced in December 1882 under my orders; structural repairs to the Great Tope and its elaborate gateways, two of which were in fragments on the ground, being accomplished by the middle of April 1883. Much remains to be done to the various structures, about which General Cunningham and Mr. Fergusson have written at greater length than about any other group of Indian monuments.

Casts of the eastern gateway made by me in 1869 are at the Kensington Museum in Edinburgh, and in Paris. Sir Lepel Griffin has informed Government that Her Highness the Begum of Bhopal proposes to build a travellers' bungalow

See Countrigionn's Billion Tops, and Pergusson's History of Indian Architecture" and "Tree and Serpent Worship."

chare to the Sanchi monument, and the Bhopal State Rail-

way will have a station at the village.

The Central India Agency embraces a large area of great archeological and architectural interest. Besides Gwalior and Sanchi, to which special attention is being directed, there are the important centres of Khajuraho, Oorcha, Duttiah, Mandu, and Bhilsa, all of which should be surveyed and cared for.

Sir Lepel Griffin reported to the Supreme Government in March last that all of the Native Chiefs "will in different degrees consent to contribute to such schemes as the representatives of the British Government may specially press upon their notice. . . . Where a particular work is to be undertaken, the Political Agent will from time to time endeavour, with as little friction as possible, to obtain help both in labor, material, and funds from the Native Chiefs concerned."

16. Appendix H, deals with Rajputana, a country which above all others in India possesses most interesting historical and artistic traditions. They fired the enthusiasm of Colonel Tod, who in his "Rajasthan" records experience and investigations extending over several years of official connection with the States of Rajputana. Most of the numerous Native Chiefs take a pride in the monuments of their ancestors, and are more easily induced to bestow care upon them than any other class of Native Princes in India. The Governor General in Council has recently determined to induce the Durbars through the British Political Officers to make a real effort to carry out the repairs and remedies recommended by me, and I am confident that a careful survey, calling attention to the necessities in each structure, will in time be productive of the best results.

Repairs have commenced to an interesting marble pavilion of Jahangir's time in the Daolat Bagh at Ajmir, and some further repairs have been applied to the ancient mosque of that city known as the Arhai-din-ka-Jhompra. Surveys have been made of the group of Muhammadan buildings in Ajmir called Khoja Syad, and of the Jain Tower, Khumbo Rann Tower, and Sanga Chaori at Chittore in Meywar. Permission has been obtained to survey the ancient palace at Amber wear lainer, and the Jain tumples at Alm.

near Jaipur, and the Jain temples at Abu.

17. Appendix I, relates to operations in the Punjab. A number of works, projected on recommendations submitted in a report on Lahore and Delhi (see Annual Report, 1881-82, Appendix H, pages xxi-xxix), had been estimated for by the local Executive Engineer early in 1882, and the visit of Sir Robert Egerton to Nur Mahal near Jullunder mitated

Retaile

Punyab.

repairs to the gateway of the serai at that place, for which I furnished a restured drawing. Besides these, repairs to a number of minor huildings around Lahore were provided for in an estimate framed by the Executive Engineer at Lahore. It soon became evident to me from the specifications which I had an opportunity of perusing that no satisfactory results could be obtained unless a special officer had charge of the works: I accordingly recommended Sir C. Aitchison to apply for the services of Mr. Heath, Exerutive Engineer, Archæological Division, North-Western Provinces. It seemed to me that this officer, with suitable sub-divisional establishments, could simultaneously superintend work in the Punjab and North-Western Provinces. Objections were, however, mised to this arrangement, and Sir C. Aitchison determined to appoint Lieutenant Ahbott, R.E., to the charge of an archivological sub-division, and directed him to arrange plans for repairs, and to prepare the estimates in communication with me, and under my approval. This appointment took place on the 3rd November 1883, since which date Lieutenant Abbott has been engaged at Lahore and Delhi in the initiation of the various repairs, specified in the Appendix, to the following buildings:-

Jahangir's tomb.
Asaf Khan's ...
Nur Mahal's ...
Miscellaneous tombs in and around Lahore.
Shahlimar gardens.
Tomb and mosque of Jamali Kamali.
Humayun's tomb.

Many of the works had been commenced before Lieutenant Abbott's appointment, and I found it necessary to recommend the numerous changes and modifications set forth in the Inspection Notes, pages eviii to exii. The following projects for buildings have been modified or newly prepared by Lieutenant Abbott:—

Jahangir's tombShahlimar gardens.
Naulakka pavilion in the fort.
Fort historical buildings (petty repairs).
Kila Kona mosque in Purana Kila.
Historical buildings in and around Delhi (petty repairs).
Dewan-i-am in the palace.

Besides these, Mr. Harrington, Executive Engineer, Jullunder, has most successfully carried out the projected repairs to the gateway at Nur Mahal, and has commenced repairs to two beautiful tombs at Nakodar.

A memorandum on explorations in Eusofzai is quoted at length, and describes the very interesting Græco-Bactrian sculptures that were obtained. I hope that something will be done annually until the whole district has been thoroughly examined.

examined.

North Western Provinces and Outh. 18. Appendix K, relates to the progress during the year, of work in the Archæological Division, North-Western Provinces and Oadh. An opportunity occurred in May 1880 of reporting on the restoration and preservation of architectural buildings in and near Agra (see Annual Report, 1881-82, page xxix), and the comparison at that time between the renovated and cared-for Agra monuments, and the aspect of ruin and neglect afforded by the Lahore and Delhi huildings, furnished the most convincing argument for the necessity of conserving the ancient monuments throughout India.

Sie John Strachey's system. The system inaugurated at Agra was as simple as it was effective. An Engineer of general ability having been appointed, Sir John Strachey, then Lieutenant-Governor, issued his own instructions after personal and attentive scrutiny of each individual structure. The taste to discern what was uccessary directed the operations, which were carried out in a workmanlike manner. Sir John Strachey was succeeded by Sir George Couper, who took less interest in monumental preservation, and the Archwological Division has been threatened with changes; but the foresight of its originator had secured the requisite funds for completing certain definite operations, and momentary indifference or financial pressure passed harmlessly away.

So Affeed Lyal a interest in the

The present Lieutenant-Governor, Sir Alfred Lyall, with cultivated appreciation has encouraged the work in the Archaeological Division by personal inspection of the monuments at Agra, Jampur, and Sarnath. The orders of his Government issued in June 1882 directed the Executive Engineer to prepare his projects and proposals in consultation with the before being finally dealt with. I have in this way been able to make some suggestions, notably those concerning the restoration of fresco paintings in the Fatchpur-Sikri and Sikandra buildings. The revival of the colored patterns in the arched entrances and interiors has wonderfully improved the appearance of the structures and brought to light one of their most characteristic and singular qualities.

Revival of parting

I have also endeavoured to suggest economical remedies, Economical as, for example, in the two cases of renewing the ceilings of the beautiful palaces known as the "Khas Mehal" and "Dewan-i-Khas" in the Agra fort. These buildings had many years ago been robbed of their heavy marble ceilings, and to support the flat roofs were subsequently furnished with iron joists which looked very unsightly from the interior. Mr. Heath's original estimates for replacing the ceilings in their massive integrity and completing the repairs to the two pavilions came to Rs. 1,60,633—an expenditure so obviously prohibitory that I recommended the use of iron joists as a support for a lining of thin marble slabs, and the revised estimates, aggregating Rs. 45,921, showed a saving of Rs. 1,14,712.

The works of importance in contemplation and requiring Works of im-

completion are—

Works of impostance to be completed at

(1) The removal, from the Birbal house, Miriam house, Agra, and Akhar's office, at Fatchpur-Sikri, of the unsightly doors and appurtenances used in the buildings for the accommodation of travellers

(2) Complete renewal of all frescoes on ceilings, walls, dumes, arches, &c., in the

Khas Mahal Jahangir Mahal Akbur's tomb. Etmad-ud-Dowlah's tomb. Mosque at Fatelpur-Sikri.

- (3) Completion of repairs to the Jahangir palace, Agra fort, now possible, as the removal of the Provost Sergeant's quarters from one of the roof pavilions has been arranged for.
- (4) Complete and effectual custody of the restored buildings, to prevent theft of mosaic stones and damage of any kind.

It is most desirable that all the necessary military im-Miniary improvements to the Agra fort should be devised so as to provements in the Agra interfere as little as possible with the architecture of the walls tork, and buildings, and the Inspector-General of Military Works, Colonel Innes, V.C., R.E., has directed attention to this point. He has also ordered the carved pillars and walls of Akbar's palace at Allahabad, now used as an arsenal store, to be freed of whitewash.

Sarnath Tope An estimate has recently been sanctioned for repairs to the Dhamek Stupa at Sarnath near Benares.

Important works still to be undertaken In the N.-W. P.

A great deal of important work remains untouched in the North-Western Provinces, as, for instance, the ancient Muhammadan brick buildings at Budaun, some remarkable Hindu temples in the Banda district, the Chini-ka-roja at Agra, and some most singular brick and terra-cotta temples at Bhitargaon near Cawnpore. Nothing whatever has been done in Oudh.

Castral Pro-

19. Appendix L, contains a note on the buildings of interest on the island in the Narbadda river at Mandhatta. This is the only place I have had time to visit in the Central Provinces. A complete survey has been made of the island, also plans. &c., of the three principal temples on it, i.e.,—

The Siddeswar Mahadeva. Omkar temple. Somnath Gauri.

Besides these there are on the south bank of the river the temples to Vishnu and Mamleswar, both of which have been measured. The Siddeswar Mahadeva is unique in plan and ornament, and requires attention, being in a very ruined condition. My plans and notes with suggestions for repairs will be soon ready for submission to the Chief Commissioner, who will, I hope, depute an engineer to do what is requisite. I hope to gradually visit and have surveyed all the more important monuments of the Central Provinces.

Places not yet

20. Appendix M, gives a list of Provinces and Native

States not yet visited.

Haidershad.

21. Appendix N, refers to Haiderabad, Deccan, and describes what the Government of His Highness the Nizam has ordered to be carried out at Kalburgah, or has in contemplation with regard to the great mosque and historical tombs of that town. Kalburgah is the only place of interest I have been able to visit in Haiderabad.

List of farts

orts and citadels in the various Indian administrative areas.

Plane end Illustrations. 23. In conclusion, I beg to submit some observations in regard to the question of surveys and illustrations of monuments. The only way of securing attention to disrepair and neglect in important monuments, in the use and charge of native princes or native communities, is by careful surveys with specifications of what is requisite. It is in fact an economical way of getting work done in many parts of the empire. Plans and drawings are necessary for important projects un-

dertaken in British territory; without them no reliable estimates can be drawn out for repairs, and by no other means can errors in restoration be avoided. But besides the monuments that can be repaired or attended to, there are some that either the native owners will refuse to touch or allow to be touched, others that are so inaccessible as to be beyond the compass of the scheme, and others of the second or third rank that are so numerous as to be beyond the expenditure that Government can sanction. Plans and illustrations of such classes of monuments are the only records that can be preserved. A record of all styles of Indian architectural buildings by plans and drawings on an intelligible scale can he the only means of reviving a knowledge of Indian architecture and art. At present if a native chief or gentleman wishes to build in the style of his forefathers, he has to rely on what is preserved in the brain of his native builder. are no works of reference of practical use.

As regards decorative art for rendering Indian manufactures popular and for increasing their demand, the most important of all sources for new designs is native architecture, with its marvellous elaboration and variety. At present the untrained fancy of the artisan is the usual guide for modern work, and is too often corrupted by uneducated attempts to reproduce and adapt European patterns. I beg to suggest that my office be commissioned to prepare a work to be issued in parts, which, when complete, will illustrate in chronological order the architecture and art of the Buddhists, Hindus, Jains, and Muhammadans. Major-General Cunningham, Director General of the Archieological Survey, has suggested the joint production of a volume on the "Buddhist Sculptures of Gandhara," and this might, with propriety, form one of the

series.

H. H. COLE, Major, R.E., Curator of Ancient Monuments in India.

September 1883.

## Appendix D.

Reports and correspondence, &c., concerning Ancient Monuments in Madras.

1. The tour of the Right Honourable the Governor of Madras in July 1832 gave an impetus to various works connected with Mr. Grant Daff's tour and monuments of interest in the Presidency. Mr. afficial minute. Grant Duff's minute of the 29th July notices the following:-

(a) The bath at Trichinopoly in which Bishup Heber was drawned (a linth where Ilmhop Hebee tablet has since been erected by the Mailras Governwas drowned.

ment)

(b) The monument of the Missionary Schwartz by Flaxman at Tanjore, mentioned in paragraph 18 of His Excellency's mi-Flasman's monument of nate as being threatened by the in courity of the little Schwartz. Fort Church. (Enquiries were directed by the Mudras (rovernment for repairs,)

(e) The ruins in the fort at Arcot made historical by Clive. (Further destruction by the use of the materials for building purposes Fort at Arrot. was prohibited by the Madras Government

(d) The ruins of Bijanagar on which in paragraph 33 His Excellency makes the following observations:-Bejanagur.

"Several persons have lately been appointed at the expense of the Public Wirks Depart-Native Component.

Native Component.

And the Collector, Mr. Gordon, had to appeal to his subject while I we have the product them extremely curious remains of anniquity; but it is doubtful whether they quite understand there dut not not the collector, Mr. Gordon, had to appeal to his subjective and this subject while I we have the remains of anniquity; but it is doubtful whether they quite understand there dut there. Be this as it may, no time should be let in array the further progress of muchles. Arboreal vegetation hould be designed to the contract of the contract be runhlersly destroyed, ... The centre of the most important of all the temples water immediate attention. If it can be saved at all, it can only be saved by being booked to speedily."

(e) The Vishnavite and Shivite temples at Tadpatri in danger from the floods of the river Pennair, on which Mr. Grant Duff Temples at Tadpatri. remarks:-

"From information obtained on the spot 1 am led to believe their are ample funds to prevent any harm coming to these interesting edifices, in the hands of their managers, if they will only use them."

2. During September 1883 I addressed the Madras Public Works Department on the subject of the repairs to the Bijn. Grant for Bifaunge ruins nagar monuments and was informed that a grant of Ra. 5,000 would be sufficient for present requirements.

3. The repairs to the temple in the Vellore Fort (see page cavil of the Annual Report for 1881-92) were finished in Sep-Tample in the Vellore Fort. tember, and I received and signed the completion report, which pursuant to the general orders of the Madras Government had been sout to me by the Executive Engineer of the North Arcot Division.

4. On my way to Amaravati in November, I conferred with Columni Sankey C.B. R.E., in Madras on the subject of the enmior-Special Officer for Madran ment of a special officer to undertake repairs to ancient monuments, and Mr. H. C. Black, C.E., was offered, and accepted, a temporary appointment as Assistant Engineer The General Orders of the Madras Gov-

ernment, Pulifle Works Department (No. 3214 of the 6th December 1882). specified Mt. Black's position as follows :-

" Mr. Wack will work directly under the orders of the Superintending Engineer of the Clinic in which fit work for the moment may be placed, all man Orace of the Muleus Conversances tunne as may be framed by him grong, however, three to out Mr. Start's appears these, the first instance to the Curator of Ancient Moiuments in

India for transmission to the Government Madras

"Mr. Black will be supplied from the Public Works Secretarian with the several notes drawn up by Captam Cole on the requirements of the mor aments in Southern India, also the papers to arding the rains at Hampi and the Seven Pagodas, and will then proceed to Bellary to commonor work at Hampi, where he will as 1000 as possible prepare an estimate for submitmore to Captairi Cole,"

5. I visited Amaravati and submitted the following report:-

Report on the Buildhut Time at Amusivati.

Memorandum on the present condition of the Americante Tope, dated Basalipalam, the sath Nuovander 1882.

"(1.) I have just returned from a careful inspection of the Buddhist ruins at Amarácati, and have had the advantage of uniferring with Mr. Horafall, Collec-Visit in Americant. toe of the Kritina D. trict, who superimended the excusatume urdered by the Duke of Burkingham in 1880. I also met Mr. Mackenzie, the Sub-Collector, and Mr. Grant, the Executive Engineer at Amaravati itself, and am now able to give a description of the remains of the tope and its sculptures, and to offer an opinion on the best mean of preserving them.

"(2) Paragraph 7 of the accompanying report on Amaravati and the panoramic sketch attached to it will explain the condition of the tope after the

Prestons report on Americali. excavation of 15% and been completed.

"(L) Since then Dr. Burgess, Archive logical Surveyor for Western and Southern India, spent upon related a month, between December 1851 and January 1882. Ut Domes' wat at Anniwatt. in examining the tope and in electing and packing those culp-tures which he considered worthy of removal to the Mattras Museum. These stories, number-ing 175, were entired to the hank of the Revir K that about half a mile method Amardyati, where they now are in a femal suck as we and under the care of a mility custodian. It is

scarcely necessary to ay that the stones comprise the finest sculptures and the most important his crital records at the tireat Tope. They appear to me in good condition and undimaged by the revenu floods. They had been taken out of their cases to be freed from the straw which enveloped them, and, as far as I was table to judge, the action of the water had bene-Scally channel the enrings.

"[4] The number of tune sculptures at Amaravati are as fullows:-

Number of the at Amer-Wat!

Of those that are in rity, i.e., on the circular area covered by the tope and railings, there are several that are unifouncedly in their original places, and from threathe position of the railing and that of the mound, which must have been in the centre, can be clearly travel.

"(5.) At the nutiliers entrance meanest to the village of A rawatt in the shed in which are the stones, deg teel in 1877 by Mr. Sevell (see ale tel) and Present state of the prime references). He excuentions est inded from R to L above the circumterers c, the remainder of which was excurated by Mr. Horstall in 1550. I way round to the west, the 16 ne terrace at the parts marked A is will remaining, although a 10 deal damaged. At it a parton of the outer tailing to miles ariginal parties. Furthern the roun that i another piece of railing in o et in (D), and the railern entrance (F) may be much by the pieces of calling and manney who till remain Passing round to the exact (t) in ever, and further on it a piece of the outer calling H. Beside tones, which indicate part of the outline of a serginal arrantees, here are rai smaller leaguest and miry have person a complete the desirent of the rading and h the man

y

"(6.) iff the 246 come recorded as being now at the tope, a small perportion go to make up the estate one road in pening A good many he reastered Special of the etc. round and about the railings, but the greater number are in the centre of the circle, to which position they were removed for He. Burgam' operations.

" (7.) I cannot believe that the shattered condition of the masoury and its energing can be attellutes to be not ves of Amaravasi, who are noetly Hindus. Organia cause of the min of the It is true that the grandfather of the present astrophacis known to have removed brick and stone from the central mound to build his palace and for the purpose of adding to the temple close to it, but he would have been simply concerned in getting the material and not in manhouly delecting the sculptures or smarthing up the stone blocks. The demollions of the mound, as well as the ruin of the surrounding milings and entrances, had been effected before we first knew of the tope through Colonel Mackenzar in 1816; I believe that the real descroyers were the Muhammadans, who,

under the iconoclast Alarmer, compared the district and established themselves in the lors of Kondapilli and Kondavid in the neighbourhood.

"Such destruction as Alamgir was wontto ileal on all temples of the buted idel-worshippers would have left the sculptures scattered round the tope. The subsequent demolition of the central mound by the samudar would have covered them up with hyvers of earth and slabels, to which the subsequent excavation of the tank in the centre (or, more probably, digging for treasure) would have contributed. I am assured by Mr. Horsfull that the excavation of 1880 overturned no stones from their original places; that the sculptures laid laire were not injured by the process of excavation; and that the central mound had previously disappeared, and no relie or status were leaned on its site.

"(10,) The recummendations I bug leave to submit for the conservation of the Amaravati Recommendatums to promitative time are as fullew;-

"(A) The masonry terrace-rails and fragments now in their proper positions and described at paragraph 5 of this note should be rendered secure. The existing portions of terrace should be relaid on concrete and in cement. The rails should be supported In their places by a solid foundation of concrete and by using iron burs to prop the uprights and hold them he position.

"(B.) All the fragmentary sculptures should be collected and placed under a permanent

shed in the centre of the circular enclosure.

"(C.) The bank of earth formed sound the tope by the ilemnitation of the mound in past years should be gently sloped off so as to prevent the falling in of earth, such as has recurred during the last rains. This will probably lead to the discovery of more stone; two fresh ones had been partly revealed in the bank, and were got out during my visit by Mr. Mackensie, the Sub-Collector.

"(D.) A massiry wall 7 fees high should be created round the ruins, and have an entrance gate at the north under lock and key.

"(E.) Near this gate should be a small house for the native custodian.

"(e2.) Any attempt to restore the atructure—unless is in possible to accertain with certainty the former position of particular portugus—is most undesirable, but the majority of the stones are easily identifiel as being parts of the railing or plinth, and their retention at the Ameravati enclosure would be un in size preservation, even if they were not in their original structural positions and serie merely placed on the ground so is to be easily inspected and examined.

"(13.) It would be expedient in have all the bet Amarikan sculptures photographed, and if the recommendation in this note are idepted, completion photographs should illustrate the condition of the tops and the beneficial effect of the committee. It would, however, he occurring to employ a good professional photographer to take the negatives (which should become the property of increment to period by a permanent process), as amazour work is usually unsatisfactory and not worth using too purposes of publication.

"(14.) It will be necessary to charge a special officer with the duty of carrying out the suggestions; and the arrangements will, I hope, he undertaken at Sp. 1 um ten repaire. The cost, exclusive of cases and pluxography, will probably be some Ha. 5,000.

6 Mr Black proceeded to Hampi, and on the 24th December sent me a Mr Bleid preliminary report and rough estimate for repairing the Virtala - Limetes for Hearrys Swami temple at Bijauagur. This amounted to

Rs. 870 for cutting jungle, and Rs. 4.237 for repairs to the building. I returned the papers with certain suggested modifications

7. On the 17th of January 1883, Mr. Black sent a further report on the Mr. Black report on the Vittala Swann temple which I returned with a general

Virtala Swami tample. approval of the remedies proposed.

8. The estimate for cutting down jungle and clearing from brushwood the enclosures to, and surroundings of, the Hampi temple, amounting to Rs. 870, was sanctioned by the mailras Government, and Mr. Black directed to revise the estimate for repairs to the temple itself in accordance with my recommendations.

q. A sum of Rs. 5,000 had been allotted for the work out of my budget

Allotmentine superial famile. grant for 1882-83.

10. The following report by Mr. Black specifies what he has accomplished Mr. Black's report of work at Bijanagar:—

"The outrosting of the jungle on all the buildings has been completed, about tro buildings in all having been cleared. Some extingation of roots by means of possoning with mercury remains to be done and is in progress. These roots are chiefly on the high walls surrounding the Muhammadan buildings of the zenaua and council rooms, etc., which walls are put together with such accuracy as regards stone-cutting that poisoning with mercury is the only way of drying up the roots.

The toof of the Vimanub or inner closed half has been partly removed so as to get at the broken atms beams which supported it. A plan of the

Muhammailans, and also the stone beams which it is necessary to replace. These latter are shown of a starker shade. Five stone beams have been chosen from the adjacent ruins to restrone to a thicker shade. Five stone beams have been chosen from the adjacent ruins to restrone beams. These latter are quite plain, being merely squared stone, without any place the broken ones will not appear arring, but a that farmer beams had but alight carving on them, the new ones will not appear irregular. They have been brought to the work, and tready for housing into place. Some more of this roof must be taken off to replace the broken beams; but wooden shepers must be obtained to make law strong exagings under the cracked some beams. Old sleeper have been applied for from the Southern Mahratta and the Madras Railways; but none were to be bad. Undersigned hopes to get about 150 at Madras. No sout of direct propping with posts madd be strong enough to support the great weight of these squares. Rails have also been applied for from lash the above railways, but can only be obtained from the office of the Madras Railway at Madras. About for a tone of say 30 or 40 rails are necessary, 33 so many beams and linels are cracked and broken. The conting of planter on the roots of the two adjacent temples of Basam and Kallian Maneapas will be put to hand at once. There is very little leakage through these roofs.

"The outside coating of grants ashlar of these walls had separated uself from the inside filling and was falling down. The south-west corner has been divided posterior of the south-west corner has been divided posterior to do this work quickly not well, as the standing portion is unsupported and in a somewhat dangerous condition. The other parts of the wells which require it will be gone on well at once. This work is the most important part of the repairs. Some additions to the require, which were just up by minima, have been removed. These were a

clumsy two exceed shell in the main porch, and a long narrow sheet made the closed hall. The first of these has been entirely removed and the second partially so. Photographic negatives of these two places were taken below work we mere cal. The brick walls in the inside hall have been parily cleared away, but more could us be done until the root was propped. In clearing out the suid hall a rather good sandantie was bringly in the new there is not only and the sanctium as a design. Perhaps the corresponds one may be also found, in which case they might be up ain. All the broken debris that was lying in the main porch (see photograph) has a sway.

To some number of the enclosing have had the stones partly cound out, and also be the library to the the received at a small to The party of these verandahs that are not much suited

to be set up again might be pulled down to at to leave only the back enclosure all. One of the photographic negatives (No. 2, above a portion of the columnade entirely ruined."

"A general plim of Variata Swami is herewith tent, showing the position of the buildings

in the coclosure and three Comeras, etc.

" Undersigned has also (considering that is might be wanted) been collecting materials for a short monograph of Bijamagar." . . . . . . . . .

11. Mr. Black's revised estimate for work at Hampi amounting to Rs. 18,990 having been referred to me, I returned it to the Mr. Black a revised estimates Madras Government on he of June 1883 with a for work at Blianagur. general approval of the measures provided for, but recommending the main structure of the Vittala Swami temple to be lirst repaired. I also offered a grant-in-aid of Rs. 10,000 to supplement the 5,000 provided in the Madras Budget, 1883-84, for preserving monuments, and snggested the following allotments:-

For Hampi								Ra.
	•	*	*		•	•	4	4440
For Ameravati		9						2.100
Seven Pagodas	p.							000.1

12. The Mailras Government has since sanctioned the estimate for Bijanagur Bijanagar emimate cane. amounting to Rs. 18,990, which includes-Housed.

(Vide page exxix of Annual Report for 1881-82 for notes an Bijanagar and Hampi.)

13. Mr. Black on the 18th June last forwarded his estimate for carrying out certain repairs recommended by me for the Seven Mr. Black's estimate for Pagodas (see page exili of the Annual Report for the Seven pagodan. 1881-82). This amounts in all to Rs. 2,228.

14. In paragraphs 13 and 14, page exiv of the Annual Report for 1881-82. I described the deserted "Alaiva" or Shore temple Removal of east from the Alairn temple on the coast at the Seven Pagodes. at the Seven Pagodas, and recommended the removal of sand.

I have now heard from Mr. Black. He writes-

"At the Alana temple here I have excavated both sides of the wall of the outer enchance, The walls are from 6 to 7 feet deep, and the lower perions of them are very perfect, some carred griffins heath (man the losse) which were coated with anceo being quite sharp and clean, though having been protected by being buried in samt. When the walls are quite tacceated they will form a most interesting completion to the temple, which is at present rather small and wanting in completeness without the enclosure. The walls are ornamental with the small conventional lour's rampart which are so common on the temple itself, but these are much less weather-worn."

15. After the determination of what is to be done in the way of preservative measures at Amaravati, it will remain for the Affataments for the year. Madras Government to say how the available funds

are to be allotted.

16. The operations at all three places will have to be carefully watched during progress, and certainly inspected once by me during the present year. I do not anticipate very rapid progress, as the funds are limited; the work Necessary for watching the esperations.

requires great care, and the climatic conditions of the three localities are such as

to make it only possible for work during certain seasons.

# Appendix E.

# Reports and correspondence concerning Ancient Monuments in Bombay.

1. In April 1882 a proposal was communicated to me by the Bombay Public Works Department for rebuilding a portion of the Mahratta Palace at ISuna. Mahratta Vishrambag Palace at Poona, [which had been burnt,] for use as a high school, in reply to which I submitted an opinion that, unless the original architectural appearance of the old palace was to be faithfully preserved, the project did not appear to me as coming within the scope of preservation of aucient monuments.

2. In May 1882 a Resolution of the Bombay Government in the Public Works Department, No. 326.C.W .- 792 of 1882, Architectural repulse at Bild. ordered plans and estimates for the restoration and repair of certain ruins at Bijápur to be taken up as soon as practicable and

submitted in communication with me.

3. The Bombay Government in May 1882 called the attention of the officers and departments concerned to some suggestions Orders of the Bombay Govcreatest un conserration of offered by me in the following letter, No. 174 dated antient mountments. 24th April 1882 -

" 2. I would ask to be allowed to see the plans and specifications for carrying on the suppostions comuned in the preliminary reports on Bijápor, Almedabad, Kárli, or Austaricath, in order to ascertain what is contemplated or to recummend grants-in-aid from Imperial

"3. The Resolution No. 284-C.W.-Squad 1881 of Public Works Department, that d Bombay Cantle, 7th July 1881, referring to buildings at Bijopur, directs restoration and repair estimates to be framed in accordance with the views submitted by me to Government. Reservices fution No. 100-C.W .- 177 of 1282 in the Public Works Department, referring to the Vishrambde Palace at Pouna, dated Bombay Casale, 18th February 1832, directed the preparation of a project for restoring the palace. Resolution in the General Department, No. 3048 of the stand November 1851, called for definite proposals from the Collectors concerned in respect of Ahmedabad, Karli, Amburnath, No., and Resolution of the Public Works Department, No. 100-C.W .- 301 of 1822, sunraissed the provision of iron gates to the Karli Caves

"4. It is obvious that unless I am permitted to see such projects, it becomes difficult for tree to make any suggestions. As recently Almedalaid, I believe that it will be found necessary appears an officer to specially take charge of the public monuments of interest, and the Supreme Government could probably be induced to contribute towards the cont.

5. I would also most respectfully urge the consideration of Concernment to the important question of how for buildings possessing brauniful interiors or those of a religious character bould be returned for one as offices or or dwallings or stores.

"6. Paragraph 5, page 5, and a note on the Anand Mahal, page 8, of the Blisp w report, and paragraphs 0, 15, 30, 45, and 53 of the reports on Ahmedahad and Karli (see Annual Requer, 1801-60 J. alludo to some cases of buildings the appropriation of which will, I submit. invite undesirable criticism among these who take an interest in the conservation of air on incomments in India. The convenien of temples, musques, or tembe into dwellings can scarcely be carried out without damage to their architectural appearance, and the provision of such necessaries as lathing, rearing, and cooking rooms eather defiles the buildings or brings a errord of objectionable erections into their vicinity. I should fall in my duty if I counted to express my convertions in these points; but, having done so, I can only hope that they will course full consideration.

" 7. I would conture to recommend that photographs I taken to show the condition of buildings before, during, and after remedies for our ervation have been undertaken. Many people who now visit the Taj at Agra and admire its beautiful structures and gardens have no idea of the person of neglect presented before the capains were carried out, and so h is with

many other aronument throughout India.

" 8. I may also remark that in the course of my experience there has sumetimed been in suffevent data for carrying our rentorations of buildings, mist the cither of omission or cumin being the result. No such cases have come under my notice in Hombay: but to guard again to their occurrence it is must useful to passess old drawings of buildings made either by nutives or by travellers (see, for imparise, Antiquities and Views in India from the Drawings of Thomas Daniell (123 in immler), published by T. and W. Daniell in London, 1799). Native deavings are still procurable, but diligent search has to be made before they come to light. I would recommend that local officials be invited to advertise be old drawings of anciem buildings in the Bumbay Presidency, and that a collection be formed which, if sufficiently valuable, could be purchased and published.

"9. In conclusion, I will your permission to the communication to me of copies of all papers, &c., relating to works of conservation throughout the Presidency and to particular of

works annothened for execution eather in the Chill or Public Works Department.

4. Reports having been referred to me from the Collectors of Poona and Than on the subject of manuments in their districts, I submitted the following observations to the Bombay Government:-

I have the hunour to mention in respect of the Kirli Caves that the removal of the

small temple from the front of the currance is not essential nee recommended.

"It cannot be doubted that the Hindus who frequent the Kirli Caves worship the Dagoha limite in ignorance. Similar cases of miraken identity are to be found elsewhere in India, as for instance at Gayain Bongal, where five plant figures of Buddha hiera licen made to do duty a the Pauch Pantlavas and are worshipped as such by the Hindus. Government very welly abstants as much as possible from interfering in matters of superstition, although I suppose there would be interference at the Buddhlets were present at Karli-to protest. Ver I think the line may to drawn in discountenancing misappropriation of emblems in a case like this, Educated Hindus would, I think, concur in this course. Let the Hindu & hermen venerare the Dagoba as much as they like, but they have in my opinion on business to paint it as a Logan, or to white-work the Buddhist curvings and paint the eyes of the figures black. I louid say that the Brahming wealth settle the matter and smooth all difficulties in the way

of cleaning the carvings of this most interesting rock-cut temple.

"As regard the temple at Ambarrath, I quite concur in the views expressed by the Collector of Thans, and hope Government will sanction the measures he particularises. I also support the recommendation that the lease of the Barrent Fort be not renewed, so that the runs may receive preservative measures. This and the other places mentioned, I liope to ver beservelong a but the remedies for protection and custody specified by Mr. Mulcek are, I

submit, worthy of immediate adoption.

5. In December 1882 the following orders were passed :-

Orders of the Bombay Constantant on preservation of archaeological cemaius in the Ponna and Thiles Districts.

Archeological Remains: Pecceration of in the Districts of Posna and Thina, No. 4866, Sated Bombay Castle, 6th December 1881.

Memorandum from the Communicater, C. D., No. R.-3281, chief 20th July 1882, submitting for information the following letter from the Collector of Poons, No. 2412, dated 11th

idem :-

"In reference to Government Resolution No. 2527, dated the 6th intent, Cremeral D portment, I have the honour to state that I deprecate any interference with the ceremonies re ad the Daguba, especially as they do no harm to the semple, but I will resue instructions

with a view to prevent the curvings from being white-washed."

Memorandum from the Commissioner, N. D., Nix 302, deteil 18th November 1884, Inc. Them, No. 5855, dated 15th idem:-

"Wat reference to paragraph : of Government Resolution No. 2522 of fall July last, I

have the honour to report as follows .-

"s The Executive Engineer informs me, in his No. 28-12 of 20th September, that Governme have mortioged an expenditure of Rs 556 for the preservation of the Temple of Ambarmith, and that the work is heing carried out.

Captain Cole, R.E., with pliem I have been in correspondence, has within the last few d ye valued the Bassess Fort, and he writes described ally to me: 'I spent werel hours in king over the old Portuguese churches, &c. I think something might be done to clear away the jumple from the best buildings, also to preserve the autorized stores and to strong best the ma my of the various façades of the churches. The greature eyences are the filtileward rained ingae machinery."

"4 Re 8 a month would be sufficient for a custodian for the Kanheri Cavea.

"5. Rs. 3 a year night be given to the patch of Kumlane to look after the case in his

villages. The payment would mourn his not forgetting the duty.

6. Regarding the Mahadev Temple at Lonal, the army ricks have been temperal, and coders have been issued to the patel and talate to send an annual report on the state of the temple. The collections of the mones and the planting of the hedge would not cost more than Re Su at the outside.

"J. There are some other caves in Salente that probably deserve preservation -

t .- The Mandapeshyar Cave, near the Burivii Station below a Roman Catholic Church and now to charge of the Roman Catholic community.

2. The Magathan Cave, also near the Borreli Station.

3.- The fine I goshvari Cave near the Goregann Station, the courty rd to which a good deal choked up with earth and requires cleaning our at a cost of Rs 20. 4.- The Mahakala Caves ne r Kondivin village.

\*8. From Captain Cole's letter to me I see he intends returning to Bombay early in

December, when he hopes to see all the remains mentioned by me.

"A He will in this outunit his proposals regarding the preservation of the Resear runs to Convenment and of the above also, until reserve of his proposals, I would not remember mine being acted upon,"

RESOLUTION.—Copies of the letters from the Collectors of Poons and Thina should be formered to the Caracter of Anciera Monaturns. In India with reference to Lovery sent Resolution No. 1522, disted the full July last, with an intrination that this Government will as a st receipt of his proposal referred to in paragraph 9 of Mr. Mulock's letter regarding the pre-

6 Early in December 1882, when I visited Bombay an my return from Madras, Colonel Merriman, C.S.I., R.E., the Secretary Estatates for register to buildings at Ahmedohad and in the Public Works Department, made over to me a Hilliat. batch of estimates for repairs at Alimedahad and Bijapur, which I returned a few days after with suggestions, and placed

Rs. 5,000 at the disposal of the Bombay Government for each of the two place . 7. The following orders with respect to Almedabad were passed on the

23rd December:-Orders of the Bombay Gov-erment on require to buildlugs at Alimedaliad

Il numents, Architectural, at Akmedahad-Repairs to certain, No. 1 9, C. W - 21th datal Rombin Cartle, 13rd December 1882.

"Resolution.—The Government of India having mails a grant of Rs, 5,000 for expendicular Market Marke

and the works may be put in hand.

The estumate, amounting to Re. 12,027, for repulra to the Ibrahim Race, may be returned to the Executive Engusery, Kaladge, for record, pending further provision of finale.

"Z A phinograph in negative with aix proofs should be obtained of each building and forwarded to Captain Cole as requested.

"4. The attention of the hascotive Engineer should be drawn to the temarks made by Caprani Cole on the estimates."

9. In January 1883 the Executive Engineer, Ahmedabad, with the con-Repairs to balldings at currence of his Superintending Engineer, address d Ahmedabad.

"Of the sum of Rs. 5,000 sanutioned in G. O. No. 2166, dated the 23rd ultimo, for repairs to Oosman Khau's Mosque and Tomb, it will be impossible to spend occe than Rs. 3,000 during the current official year twing to the shorter of time available for work and the distance from which stone has to be brought. It is therefore suggested that the Executive Engineer be empowered to expend Rs. 2,000 at smoe in remarked of some of the buildings shown on the plan."

to. To this I replied on the 25th January 1883 that I saw no objection to the proposed modifications in the expenditure.

rr. In reply to a request addressed to the Bombay Public Works, the Travellers' Bungalow at sanctioned estimate was sent to me in January 1883, for converting the Masjid of Mahmud at Bijapur into a Travellers' Bungalow. (See para. 2 of Inspection Note, page xev.)

12. I addressed the following letter to the Bombay Government on the 21st there to the Bombay Govern. May 1883:-

Letter to the Bombay Governsmut on the general sub-oct of commercation in the Presidency.

"I now have the honour to invite the attention of the Bombay Government to the uncatisfactory results obtained under the present system for executing works of conservation in the Hombay Presidency, and to solich a reconsideration of the subject with the view of applying any available fund- to the best advantage.

"It will be observed from the statements of the Executive Engineers at Alimedaixid and Bijipur that out of a grant of Rs. 10,000 furnished from my Budget for 1883-83, a 1 1 1 sum of only Rs. 2,714 was expended by these two officers and thus Rs. 2,784 lensed on the 2 1 March

only Rs. 2,719 was expended by these two officers, and thin Rs. 7,781 lapsed on the 311 M with "An regards Ahmedahad, an estimate for Sy if U man's Mesque and Tumb, amounting to Rs. 12,350, was satisfated in the 23th December 1882, and the work ordered to be put in hand to the extent of the Rs. 3,000 pranted by the Government of India. The Executive Engineer represented, however, on the 15th Juntury 1884, that we large a sum could not be expended during the official your, and I agreed to be proposal in at once apply Rs. 2,000 to the removal of certain unsightly hovels round the Tomb of Ahmed Shah at Ahmedahad. Even this was not carried into effect, and the actual work done is represented by the sum of Rs. 278 expended in removing and rebuilding a stome wall. The balance of Rs. 1,588 is represented by materials at site, whilst a sum of Rs. 3,134 remained unutilised at the end of the year.

"As regardy Hijkpur, the tollowing estimate were sonctioned .-

						The.
Mehmy Mahal	4		4.0			1,676

Moore Manjal				-		Res

I the a closers threal to be put in bond. The actual repairs officer of are represented by Rs. 31 on the Mucca Ma is I and Rs. 335 on the Gagan Mahal. A sum of Rs. 4,117 remaining unutilised at the end of March last.

"Although the sum of Rs. 7.28t, which was thus surrendered could have produced con-

or not here can of its bind.

"I have not been alle to inspect the wall that was reliable as Almedahad for Rs. 278, but in far as the work at Hijspur is concerned, the repairs to the Mecca Marjul would have be a better left, for the most part, underse it appeared to me that repairs in planter had be a appeared without judgm ut, and the whole most unreasonably whitewashed. As I have explicit without judgm ut, and the whole most unreasonably whitewashed. As I have explined in my lutter No. 25 of the tith April, Mr. Remold, the Executive Engineer, was about the form Bijlipur ut the time of my visu, and I was accordingly usually to accertain exactly what I d be a done to the two buildings in quenton.

"Resolution No. 518-C. W.—1238 of 1882, states that the pre-ervative works recommended

by me (see my preliminary reports on Bijapur and Ahmedahad, dated respectively 17th Junard and only Doubler 1881) are beyond the means of the Bombay Government, whose final are permarily required for works of public utility. From the experience of last year u is new apparent that when special lunds are provided, the difficulties are by no means at an end.

"The recommendations contained in paragraph 5 of my letter No. 265 of the 22nd June 1990, are, I submit, sound, and my experience is that the expenditure to the best advantage of any special grant for preservation can only be secured by employing a pecial officer with any special grant for preservation can only be secured by employing a pecial officer with particular class of work. The best conten would, I think, be to particular monitments sub-division, and to place a young officer on special dary for their particular with subable qualifications could not be special from the Bombay. Tublic Works Establi funent, I would suggest that an application be made to the Governof India in the Public Works Department for the temperary transfer of an Assistant

Lea neer. "The Panjab Government has lately established such a sub-division, and the Assistant Engineer in charge, Lieutemant Abbott, R.E., works both at Laboro and at Delhi, being at lied to the Provincial Divisions at each place for purposes of routins, accounts, &c. — If a sum of say Rs. 10.000 can be found by the Bombay Government, I can turnish on

equal am out of my grant for the current year, and will do my best to assist the Bombay

"One or two buildings thould, I think, be put in hand at Ahmedshad, and as it is nected by calway with Bijāpar, the officer in charge of the sub-division could carry on work at both places. He should be deceily under my orders in respect of the technicality of his work, and be attached to the Ahmedshad and Hijāpar Davislous for contine matters of expensions. dure and account

" Itis first duty should be to prepare estimates in communication with me, and he should

fir take in hand the following buildings:-

Bijāpur. Tumb of Mahmud .

Syad Usman's Tomb and Mosque .

Abmed Shah's Tomb

"I hope that the course appeared will meet with the lavourable consideration of His Excellency the Governor in Council, and that I may receive an early intimation of the decision arrived at, to permit of my providing funds from the Hudget Gram of my Department."

13 After despatching the previous letter, the following Resolution reached me from Bombay :-Mesol tion of the Bombay

Common on experies at Ale labore.

dechaplagical Remains, Ahmolahad, No. 1627, dated Rombay Castle, 15th May 1683.

letter from the Collector of Ahmedabad, No. 1297, dated 3rd May 1285, forwarding, with trieven a to Convernment Resolutions Nos. 2018 and 1;83, dated respectively 22nd Novembe and and 15th May 1882, a report on the archaeological and archaeotoral remains in Ah sails and observing that the appointment of a Curator, a recommended in paca-ty 4 d Captain Cole's report No. 174, daired 4th April 1882, would be most adventiles, and that it change of the persons concerned with the managers consciousing to the experie he pay.

Resultation - A copy of the Collector's letter and of it accompanies a should be Con a Resultation No. 1783, water 15th May 1 de14. The following inspection note on Bassein was forward I by me to the Bombay Government on the 9th June 18 1 -Hassein.

Note an the condition of the Buildings in the Pertuguess Fort of Battern, Bankay.

"My visit to Hassein took place on the 11th November 1 2. The Poet is reached from the Bassein regail 5 zion on the Bassein, Barods and Control India Radway, and is about 5 miles distant. It was built in 1535 A.D. by Nuno-da-Gunlin, and is in the form of an irregular decayon, the circumference being a mile and a hall. It is cless to the seand has a seasone and a land-gate. Near the soa-gate in the Cathedral of St. Joseph embilit in A.D. Hote. It is in the style of mediaval architecture of Sauthern Europe, and has a towar to last the state. structum is greatly ruined and surrounded, and overgrown by pupal trees and clophant creepers. Dangerous portions of the buildings should be taken down, trees and segment on remon it, and the security of all inscribed stones assured. There is a number on in the body of the church, dated A.D. 1018, which ought also to be preserved.

"An inscription, dated 1536, is mentioned in the history and antiquities of Barrier by J. Gerson da Cunha, page 217, as being on a wall of a leather of a list. It record the

building of the fort, and should be read-red accomble and preserved.

"The chapel of the Misercoulle should be cloured of vegetax."

"The church of N. S. da Vida at a ll as another thurch were a nerry direct warehouses, in connection with a sugar referery, new abandoned, and the restrict machinery, discount our

the church and monastery of the Jesuits, dated 1548, should a far as possible be proprincipal façade. The rules of the Franciscan church and muon tery should a be cleared out, and the numerous combinance with their various inscriptions preserved. "Here and there in the walls of the fort are to be seen pion of sculptured surve, which

no doubt in lurmer years belonged to Hindu buildings.

"Within the fort wall is the residence of Major Littlewood, who cultivated the open a and who built the untightly sugar refinery works,"

on Bijapur to the Bombay Public Works Depart-

# Note on Buillings of Hijapur.

"I visited Bijspur in March 1883 and wem over the buildings in the cay on the roth of the numb. The new line connecting it with the Great Indian Peninsula Railway at Hudgi was complete, although not yet open for traffic, and I had the advantage of traveling to and

"There can be no doubt that Bijapur will become much mixe frequented a copn as the line is open. The rallway station is quite close to Mahmud's Tomb, and an estimate for converting the small adjacent mosque into a Travellers' Bungalow was convertined at this end

2. I have several times protested against this arrangement as being vandalistic, and one of the principal objects of my visit was to see how far the alterations would affect the building.

which is a minimum specific plan, copied from that which was concluded, shows how the interior is participated off into foursels of rooms, also the latrings and buthers in that have been built on to the exterior walls. Two of these excrescences thing the central chapet or makents. and to communicate with them a doorway has been opened out through the very sanctuary of

4. The interior effect of the ranges of arthes is entirely spoilt by the partitions, but the walls are carried up only a few feet, so that the four sets of travellers would either have to be

"5. Cut up thus into entall chambers the building cannot help being unbearably hor. There is no thorough ventilation in the lower parts of the rooms, and nothing will prevent the

There is no moronign venturation by beet, battle or the rooms, and nothing was purpose parts from invarion by beet, battle or birds.

"the accompanying skeinless taken from photographs by Mr. Reinfold, the Executive. Engineer, show the entitlegade of the building towards Mahmud's Timb Thurs is a remarkably handsome range of sculptured more brackets supporting the case of chinja at the markably nandmine range of and flanking minurest are good examples of their class, the

whole being most agreeably harmum a, but the effect is marred when this eyn catches the white-warland partition of the interme and the hath-room over

"7 A much more smalle building for travellers is the Nakaskhan h shown in the smaller of the two sketches. It is in fact raw used as a rest-house by the Railway Officers, the lower part being used by servants, and the upper floor for sitting and bed rooms. I can speak from personal experience on the excases of my rit, but a stold that there is always a pleasant faces through the upper rooms, which are raised high above the ground and are therefore very pleasantly coal. The Nakarkhanals, although part of the infigural design of the whole group of buildings, I quite plain, with no presention in an hiroctural be my, and its permanent conopranii into a rest-house is far les objectionable from un architectural point of view, and t much mure expedient if the comtact of travellers is to be can ideant.

" 8. The following estimates which I had previously seen were sauceaused by the Hombay

Government on the 23rd Documber 1-

					Rt.
Guma Mahill					1,675
Gegan Mahill Meksar Mahil					1,505
Mocca Marjid	4				1,355

Nothing had been done to the two first buildings, but I regret to say that the repairs to the Mesca Marjid were made to include application of white-wash to the work, which mars the

while flavor or the will-intentioned receivily.

"A. The Executive Engineer at Hij ipar is now hardy engaged in conveying a number of buildings in the chald into offices and dwellings for the Kalild it District Officers, and his time is ally occupied. Two year ago I abmitted a report on the Bijdpur project (see page CXLI the Annual Report for 1881-82), but special repairs to the architectural buildings were tax ametioned when the project we finally present.

"10. The experience gained in other parts of India shows that architectural repairs can in by he properly done by an officer who devotes his whole time to the work. Bad repairs are were than neglect. I have therefore recently recommended the Buntary Covernment to

er e a special sub-division for conserving uncient munuments in the Presidency. (Vide letter No. 73, dated 2111 May 1833.)"

## Appendix F.

Reports and correspondence concerning Annual Monuments in Bengal.

1. As already pointed out in Append x Q of the Annual Report for 1881-82.

General manufacture in Bengat Covern it of Bengal employed Mr. Beglar (late As it to M. jor-General Countingham) to combact repairs to the great Buddhist temple at Buddhist Gaya. Mr. fieglar has since then been engaged at Sasaran, and has coughly shaped some repair estimates for Rollasgach in the neighbourhood of Sasaram.

2. Hiddha (Liva hasing been commenced before my appointment, under the advice and direction of tieneral Cunningham. I a ked Sir Ashley Eden, who invited me to in pref the work to be the operation proceed as projected. I visited Buddha Gaya however, on the 7th March 1882, and submitted some general recommunication to the Bengal Government on the object of completing a set of illustration of the Bengal Government on the object of completing a set of illustration of the Bengal Government on the object of repair, and urged the provision of permanent of the budding. I also advocated the disposal of the many him he I duplie the specimens of small votive topes and stone tragments among the various provincial mulciums in India. (See page vivi of the Annual Report for 1881-22.)

3. Since then I have been in frequent correspondence with the Bengal Government on the subject of Mr. Beglar's repairs to Sher Sh. h.s. Tomb, a Pathan building of importance at Sasaram, so mile such of Arrah. An estimate had been prepared by Mr. Beglar mainting to R. 50.698 but not, as it with meaning making to know how this amount was to be expended in the building. I as a distributed the Bengal Public Works Department to allow me to the estimat and received the following letter from the Secretary:—

I am dicered to the world have the first in impression Mr. Beginn's estimate of the order obly reporting Sir Sinh a Tomb in Sugarant, and to inform you that the work and has jaminary authorise. Mr. Begins to put in hand outly urgent report to a work immediately near try to prevent without determination of the roll, and a vine of Rs. 5,500 a so plend in the property of the information of the roll of the property of the intermediately, but to time the expend who are the work to should Ray the formation of the rolling of the rol

R. "WI in the fenocul arms remems of the current official year came to be revi th, however, used that the necessary demand for works to proceed the pure illis of carrying to the term of and Mr. Regian is therefore in limited to the execution of the materials with his magnitudy undertook. There are so

The remainier of the work provided for in the entired must stand over for the present, and that to a un timate it probably when the time comes of resoning and a pleting the a ch. Mr. Hegier t serve. Y I av lable for the supervision of it. Under the circum tances, I am to state, it will be an advantage, you can assen any pure of the fand plan of ve ril. I by the isosumment of India for the conservation of ancient community, and enable Mr. Beglar to complete such other stems of the estimate as you think the conservation of the conservation of

"I am to request that the estimate may be returned at your early convenience."

4 I subsequently assigned a sum of Rs. 5,000 out of the funds placed at my districted by the Government of India for 1882-83, and, Grant for Shir Shah's Tomb. as requested, mentioned the items which seemed to me best to carry out for this amount.

5. After visiting Sasaram I submitted the follow-Inspection note on Shie

Shah Tumla ing inspection note: -

"I visited Sasaram with Mr. Reglar, Executive Engineer, Auclent Monuments, Bengal, and in present his work at Shir Shah's Tomb on the 7th March last.

"The first thing that strikes me is the very unsatisfactory condition of the causeway lend-

ing to the tomb, which stands in the centre of a large square tank.

"The accompanying sketch shows the two fractured ends of the old causeway or bridge and the removated approach, which is a low curthen embankment, with a small museousy bridge

"Nothing could be more inconvenient and luharmonious than this arrangement. If it is desirable to track the tomb at all, it is surely undesirable to descend in order that one may ascend. The old causeway harmonisad with the architecture of the numb, and had arches of the Pathan pattern, and it is surely incontatent to place at the very threshold of the edilice anything so out of keeping as the prim little massary bridge represented in the accompany-ing sketch. I hope a fresh estimate will be ordered for reproducing the old lines of the cume-

"The next feature which arrests the eye is the knotque crowning the dome of the temb. There can be no dealer that this is a modern feature in the building. The adjacent tomb of Shir Shah's lather. Husain Khan, has a pinnacle or finial, which mode of terminating a dome is the invariable feature in all Pathan tombs, and is also used in the Kha-kona Masjid at Delhi, the finest of all the buildings of Shir Shah's time.

"So convinced do I feel that the present kiesque is a modern addition, that I advised Mr. Beglar to remove it, and to replace it by a total, on the puttern of that in the central dome of the tomb of Shir Shah's father, Husain Khan. (See accompanying sketch.)

"Mr. Beglar's original estimate of Shir Shah's tomb unduded repair to the outer gateway and the appreach. Of this, Rs. 11,153 were given by the Bengal Government, supplemented by Rs. 5,000 out of my grant.

mented by Rs. 5,000 out of my grant.

First and foreness, I think the phater repairs are too conspicuous. The dome which has been completely recovered is most glaringly white. The valour of the plaster should have notified the masonry of the body of the structure. I notified the re-pointing in the masonry of the plaster used in the paraper walls is, In my opinion, unnecessarily liberal. I mentioned these points to Mr. Beglar, and asked that the robust of all the planer work might be inned down to match the stone colour of the whole mass of building.

"The interior of the tomb, which is very fine and impressive, is lighted by a series of window openings above the wirandah. These used to be filled by tracery, and should be so

runlled. The effect would thus gain immensuly at a tenting coat.

"The various carved enrichments which ailern both the exterior and interior of the building want clearing. Many of them are of good design and worth illustration, but at present dut, &c., tenders their unattractive,

"Surrounding the verantish of the temb like a bold cornice is a chajia or cave. In many parts broken, it gives a rumed appearance to the building. Its restoration would not only

improve the effect, but keep cain off the walls.

All traces of coloured tile ilocoration should be carrfully preserved.

"A gar way errected on the west sule of the great tank should receive petty require.

"The earth excavited to form the great tank was banked up all round its four sides, and to a great numarure riwards and conceala the tomb. It would be a great advantage to distribute

il einb mer the surrounding fields.

"The 1 mb of Huzzin Khan to the east of the great tank is a building of considerable mera. The sketch gives a general idea of his outline and manive proportions. The interest I want deal of coloured decoration and incised planter amanum, and there is some tile-work All or these are well worth recording by illuminon. The building hauld be ned ut and receive necessary remirs to the coof and domes. The fallen caves or chaijing should be renewed both for protocting the walls and for appearance sake."

<sup>.</sup> Mr. began and her region on the this broke, but the west was taken one of the Land comment to Combi Cap-esment

Reports and correspondence, &c., concerning ancient monuments in Central India.

On the 14th of October 1882 Major Keith was appointed temporarily to Appointment of Major Kodo, be my Assistant for Central India. He had been A antifer Central India. engaged during the early part of the year, under the Agent to the Governor-General, ou repairs to the temples and palace buildings in Ferroess Gwaiior, also in collecting carved pillars and isolated sculptures munit the great Tell-ka-Mandir.

I gave Major Keith the following instructions on the 26th October

In rach' ofer muchon 1882 --

"A sen of Rs success will be allosted by the transforment of India this year for repairs to the Sanchi Tope and for work at Manda. The accompanying report has what are the a so that you are to undertake; and as any unspecial parties of the Rs 20,000 will lapse on the type Alarch and it is important that you should get to work at soon as possible.

"You should proceed in it that but e, and with as little delay a possible, to Sanche or the and southern grievary and complete the repairs to the urface

machiny of the Count Tope."

"Chief Thomason, R.F. a Indone, has landly promised to send an engineer for a time it you in the rebuilding of the falen gates, and con should therefore you to Indone on way to Saudi in order to confer with him, and to ascernin what material, we be could not you.

The learnest wright to be lifted will be under 5 to no. You like u are three differential pulleys, the capable I lifting such a weight, good group rope, not and t such an har for commenting present ones; a mail furnation, he id older, black-doi: to be maintained endedling to be a fall githe carrings a garden purp. Portland gament, and being mortar. Rembase aims country rope can be procured at Bloopal The cost of material, tool, her, salary of temp any ablishmy to nebuling the pay of the large new left by Col not the major, carriage, labour travelling expenses, and your was salary to 5t t March, will all be charten of an time Re an angent. The mater it that you are presented in the form of the major of the Re and no grant. The mater it that you are the fact of the fall wish Sauchi early in December next, and the major in the Re and the said of the fall of the particular to Mill differential the starting the Sauchi early in December next, and the major to Mill differential the starting the Sauchi work you first yourself able, you

"On the completion of Same is as I will and a photographer to take photographed in a sund on an account of the photographs of t

3. After presently in pering the Sanchi buildings in Discember 1882 and the state of the work conducted by Mr Mean, who had been employed the previous y s by Strat Agent, thopal, in filling the breach in the Tope and clearing jungle to buildings I found it necessary to somewhat modify the first instruction on the 13th Documber addressed the following to Major Keith:—

Base 1 . Sour attention is directed to the following point in respect of the work at Sanches-

The first works to be stended to are:—The reservation of the failes enterways, i.e., the way in all using gate of the Great Pape and repair to the small gateway to by Arranges. In for the bould take precidence of all ober work. If you find that a heavy time the amount of provided here in Rhapel, it will be executary to get the in of from the first heavy to be in, and to arrange at once for their entrings to Sanchi. It will be come in the disk time. A certain amount of operating will be seen in the machine of the original trees are and two health in

6. I had previously received, through the Government of India, a capy of a report and rough estimate framed by Mr. Beglar for repairs to the pal or buildings at Kohtusgarh near Projected impairs to Robins-Sasaram, and took occasion to confer with Mr. Beglar Karp-

on the subject.

7. Having the conviction that the best monuments of their class in Bengal should be taken up first, I addressed a letter to the Rengal Government in the Public Works Department Recommendation for system-(No. 47, dated 26th April 1883), from which the atie work in Bengal. following paragraphs are here quoted ;-

"The questions in any administrative area are primarily—what are the best and most singular nutional monuments? what is the least that should be done to prolong their existence? and by what means is the work to be carried out in any reasonable time? It will certainly be necessary to establish the Ancient Monuments Division for a term of at least three or four years; without this, conservation in Bengal will not have been even seriously attempted.
"I have drawn up a rough map of Bengal showing some of the principal ancient menu-

ments in the Presidency. A survey should be made of these, and the remedies indespensable in each case can then be agreed on.

"Mr. Beglar's report on Rohazsgarh, teagether with a rough estimate, has been rent to me for opinion. A grant of Rs. to con is asked to meet the cost of the repairs of certain structures. To this I can but say that the work seems in itself desirable, but, as there are better examples of Man Sing's buildings in Fouress Gwalner, to which repairs have commenced, I put the Gaur rums beime Robinsgarh in degree of national impurtance."

" The buck and terra-cata buildings of Bengal, of which the Gaur and Panduah Musque, &c. are singularly good examples, possess an importance for the whole of India. Buildings of this cl - were erected in localities where stone was scarce, and a revived knowledge of his

frick and terra-cotta were employed would be of practical utility."

8. To this letter I have as yet received no answer, but it seems to me the inconsistencies will be inevitable unless general prins ciples applicable to the whole of India are followed Application of general prinin the selection of monuments to be repaired and ciples necessary. in the remedies to be applied.

Mait Kath' be all had I peeri of Sanchi unfortunitely presented his mathing the cent of (Mare ) operation until December but the programmer. I must say, under dimenties of no common kind, during the most to January and February seemed to me out creditable to Maint Kelth and to Us Loui, the Engineer placed at my disposal by Colonel Thumason.

Plan of the Sanchi II I

Part of clearing of tives 48 along the early or tope ग्रह्मा-संद

5 The accompanying plan shows the condition of the Buildhot remains to January 1881. Sincothen Mr. Mear partially charms may the trees and vegetation which had overgrown the vating structures. He also filled in the brach in the Great Topy Although a step in the right timetion a great deal remained to be done, and when I saw the place in December last, the ground was still atrewn with fragments of the railing and tee which surmounted the great mound, with huge blocks of the fall a mathern and western gates, and with carvings of all kinds belonging to the four Buddhistic shrines that occupied positions against the plinth of the tope opposite the four gateways. The plan is an accurate record of the position and nature of the fragments that surrounded the various monuments on the hill. It will be observed that the tope and railings are elliptical in plan and not circular as intherto represented.

a By March, a complete transformation had taken place. The whole of

Progress in March 1883.

Circal Tope

the jungle had been removed from the Great Tope. The ground round it had been partially cleared and slaped so as to prevent water lodging. The processional path between the railing and plinth of the

mound had been partly freed of debris and earth, the stone pasement laid hare, and several fragments of sculpture were recovered during the proce s of clearing. The figures of finddha were in process of re-crection in their respective places against the plinth of the tope opposite each of the four gateways. The great Asaka railing had fallen between the north and west gates, between the west and south gates, and at the east entrance, and was shaky in many other places. The whole had been straightened and securely tied by iron bars, across the circular processional path, to the maloury of the tope.

North gate.

Hant gute.

South and well gates.

Small gate.

The northern gate rendered dangerous by the crack acro the lower part of one of its uprights had been secured in the same way by iron bars in the tope. The eastern gateway had been similarly secured. The southern and western gateways were in process of re-crection. The smaller gateway of the tope to the

north had been completely rebuilt. In supplying missing portions of the gateways that were re-erected, plain stone was used, any reproduction of carvings must have been imaginative and wholly misle ding. The sculptures on the northern gateway and gateway of the small tope had

been thoroughly cleaned, greatly to their advantage. Clean g of scalptures.

Each bas relief has become as sharp and clear as when first chiselled.

Owing to the eradication of jungle, the outline and position of the various surrounding topes, temples, Chartya Hall, Vihara, and walls of the monastic buildings are now evident. The approach road on the north-side of the hill has been opened out and restored, and the arcient causeway leading from the small tope B2 on the west has been improved and stepped. The retaining wall to the east of the Great Tope had been partially rebuilt, and the temples, Chairva Hall and Vib ra cleared of debris. Two large statues of Porters or "Gwapals" found in clearing the ground had been erected to the north of the Great Tope.

7. The heavy part of the work is done, but the following remains to be

Were remaining. finished -

### GREAT TOPE

(1.) Complete the sluping off of the ground.

(a) Completely emdicate all mosts of trees or creepers.

(3.) Rebuild the plinth which bulges dangerously near the south gate. (4.) Secure the surface meanary of the tops by filling in the joints and

(5) Rebuild the miling on the summit of the mound.

(b.) Complete cleaning of all sculptures.

### SMALL TOPE B2.

(7.) Fill in the breach in the mound.

(8) Secure surface masonry of the mound. (9) Clear ground of rubbish and trees.

(10) Secure railings.

(11.) Clean up processional path. (12.) Clean all carvings.

(13.) Wall round the small tope.

#### GENERAL.

(14.) Build a wall round the Great Tope, Temple, Vihara, and Chaitva, clear of all aucient foundations of buildings.

(15) Complete small repairs to buildings to secure them against rain.

(th) Put up stone slabs with inscriptions giving name and date of each structure and when repaired.

## Appendix H.

# Reports and correspondence, &c., on Ancient Monuments in Rajputana.

General a hiert of capule 10

Reserve Agout Common 12-ment

1. The Government of India bas, since June 1882, been in currespondence with the Agent to the Covernor Ceneral conteming monuments in Rajpulana, and the latter has reported that, a rule, the Rajputana Chiefs pref r to make their own arrangements for the presurvation and repair of their antient ancestral buildings, but that all that

is needed is to indicate where to toration is proper and no essary

2 The Secretary to the Government of India Foreign Department, in approving the suggestions of the Agent to the Gavernor General, observed in a letter to the latter dated Order of the Gents at the 13th June 1883, that "the objects of the Government of India will be fully attained if the Durbars can be induced to make a real effort

to carry but Major Cole's plane by means o their own Agency."

3 I visited Ajmir on the 28th of July 1882, and inspected the Pavillon in the Daolit Righ which has hitherto been used for municipal meetings. It had been partially freed of its exerc cent buildings by Mr Brassington, Executive Engineer at Ajmir, but I tound that a good deal more clearing and some dismantling would have to be done before a correct perception of the necessary remedies could be acquired.

4 Mr. Saunders, the Commissioner, drew my attention to some buildings in the Ajmir Fact. They are of Akhar's time and cortainly worth photographing. The principal Pavilion is used as a Tehnil. The cultanen gateway has some Albur' Buildings in the Aim r fort nies screen-work which I noticed to be closed up and which should be opened out.

s I went to the Misque called the " Arhar-din-ka-Jhompra," a dome of which i still open and requires repair. It appeared to me M rappe at Ajmir desirable to remove a true in front of the façade. as the range of rehes cannot be properly cen. The pillars of the building require cleaning; at present the elaborate carvings are full of dirt and pluster

6. I again visited Almir on my return from Meywar, and on the 14th August went over the fort crowning the Tataghar hill, in Taraghar Gate, Almir order to see the ruined entrance gateway for which Lieutenant-Colonel Steel R.L., had asked me to provide a restored drawing. There are several tanks in the fort, and a Mosque of Akbar's time liberally white-wahed by the Muhamumdans. They hold an endowment of almost Rs. 5,000 annually for the maintenance of the structure, and might be induced to apply more appropriate remedies and keep the place clean.

7. In October 1852 I forwarded plans for repairing the Pavilion in the Daolat Ragh, and for restoring the Taraghar gateway Pay in the Daolat Hagte. at Ajmir, to the Agent to the Governor General in A;mir.

Rajputana.

S. In November 1832 Mr. Brassington sent me an estimate amounting to Rs. 388 for further demolishing the old ratten work in the modern surroundings. of the Daolat Bagh Pavilion, and I returned it recommended.

9. In January 1883 I approved and returned Mr. Brassington estimate amounting to Rs. 323 for a pairing one of the domes in the Arhai-dm-ka-Jhompra Mosque

Resemble 6 repairs to the Covernment of India undertrock to provide half the comment of two asked for the other half. I was

at the time unable to recommend this albitment.

11. At estinate amounting to Rs. 10,830 for completely repairing the PaviEstimate for repairs to the lion in the Duolat Bigh having here drawn up by
Mr. Grassington, Executive Engineer, Mayo Culling.
Almir, and sent to me for opinion I returned the
same in June 1883 and offered to contribute a sum of Rs. 5,000 out of my
builtest arount for the year 1882-b.

hudget grant for the year 1883-64.

12 A survey of Khoja Synd's Tomb and adj cent buildings at Ajmir was made in August 1882, and will with notes show what are the required remember

for preserving the various edifices

13. My inspections in the territories of His Highmess the Maharana ut Udalpan occurred between the 30th July and the Meyers of August 1882. Notes on Udaipur, Ahar, Nagda, and Chittore have already appeared in the Appendix of the Annual Report for 1881-82 (see page class). Compile survey were with the consent of the Maharana made during March and April 1883.

Children to Fort of the Khumbo Range Tower of Victory of the Jama Children Tower, and of the Singa Chaorl in the Cluttere Fortress. The plane are about to be forwarded to the Agent to the Governor

theneral in Rajputana together with recommendations for repairing those very elaborate and interesting steactures.

14. I visited Mount Abic on the 17th August in order to confer with the

Agent to the Governor General, and took the opportunity of again inspecting the Dilwarra Temples which Diseases Temples. I now have permit ion from the Sirohi Durbar to urvey. The means at the disposal of the Jan Committee for maintaining these tructures are ample and sufficient to keep them in the good condition, which, work of art of no mean order, they well murit. A carein survey will be required to show what I the present condition of the Temple and to mile to what is required to prolong their existence and preserve their claborates has feeture

15. On my return from Rajputana to head-quarters in August 188. I say do a day at Jaiput and went out to the Maharaja' Palace at Amber. My inspection not are embodied in a memorandum lated the rith August, addressed to the Resident at Jaiput (see page chair of the Annual Report for 1881-82). Permission has local teen given by the Maharaja for me to make a survey of Amber, and this will afford an opportunity of recording in detail what about do those to maintain the Palace buildings in the condition which they deserve.

### Appendix I.

# Reports and correspondence, &c., concerning Ancient Monuments in the Punjab.

1. The Punjab Public Works Department had, on the 4th March 1882, sanctioned an estimate amounting to Rs 14,130 for repairing the tomb of the Emperor Jahangir at Temb of Jahungie. Shahdam, and directions were given to make as much progress as possible before the close of the financial year

2. On the 15th May 1882 I was informed that funds were required to carry

Financial requirements in out the following works -

1. Restoration of Jahangir's Tranh at Shahilata, Lahore i estimate muc-	X.
11. Garway of old Serai Nur Mahale enterest for 17 1-65	11,000
III. Laying our ground near Hamzonn' Tout there's	3.58++
IV. Improving and fenchis the grounds are had a to the	\$ SIN
V. Improvements to Stabilinar Gardena I alian	500
The state of the s	3,000
Total Re	20

3. On the 19th June I submitted plans and drawings showing how the gateway of the seral at Nur Mahal near Jullandur Plans for repairing the Nur Mahal Seral Garaway, Juliun. abould be repaired in order to follow the old architectural lines.

4. On the 12th July the plans for improving the enclosure to Humayun's Plans for Hamayan's Tomb, Tomb was sent to me for opinion. These I returned pointing out that modernizing the grounds seemed objectionable, and that the old masonry water-channels and raised paths should be set in order, so as to preserve the original geometrical arrangement of the garden, the plots of ground then under cultivation by the representative of the kings of Delhi for tobacco, &c., being simply rescued and turled has since been done.

5 On the 13th July General Pollard sent me a plan and estimate for repairthere for mauring the ing the tomb and mosque called Januali Kamali at Torule and Museum Jamall Delhi. I returned these remarking that I thought the tomb and mosque should not be restored but simply required, and the ornamental gothic iron gates provided for by the Executive Engineer should be replaced by perfectly plain ones. I also advocated prairing the existing tile work, not rectoring it. There is insufficient data in the existing pactions of both mosque and tomb for restoration of their struc-

6 A sum of Rs. 35,000 was allotted on the 9th October 1882 to the Punjab Allotment from Imperial out of the Government of India grant for comperfun 1 in 1882-83. vation of aucient monuments.

7. A revised estimate for repairing the mosque and tomb of Jamuli Kamali was sent to me by the Punjab Covernment, and I returned it recommended on the rath October,

8. It having been decided that Mr. Heath, Executive Engineer, Arch :logical Division, North-Western Praymees could not Apprehenunt af Lintenant Allun RE he spared to superintend work in the Puntab as proposed, Sir Charles Aitchison determined on appainting a special officerfollowing Resolution was communicated to me and published by Sir Charles Aitchi un .-

" With reference to Government of India, Public Works Di partment, letter No. 132, claired 23rd September 1884, to your a blies, placing at the cuspe of a France of the Paulin South this Concerns re a grant of Ris 38,000 for the rest casion of hi turnal havilings in the Punjab, I am desired by H. Hower c

the Lustiniani-Governor to forward for information copy of a Rese man, No. 3812, dated 3rd November list, usued in the Department regarding the formation of a reso about another the charge of Lieutennus Albott, R.E., A beant Engineer, in carryin unit the veril restorations proposed in the Province, and to influence the action already taken by the Pr curried Public Works Department in regard to them.

"Rambation by His Honour the Lientemant. Governor of the Pray to at the Palle Works Thepartment, dated and Newsonies 1882.

"Ousgavarion e-Her Majimy's Secretary of State having sanctioned the appointment of a Curater of An i at Monumenta charged with e crein under toweram at the most orlebeated and imported examples o mitting archaeology and archaeothre, the foreigns General to Louncid with place of roangoint Captain H. H. Co., R. L., the form c, and to direct him, in communication with Local Covernment and Administration, to import and report in our of these is either from an archerological or attistic point of view are weithy of progression or sesteration.

"In compliance with these orders Capitin Cole las examined and reprint on it mail

important building in this fromnee.

(a) The cases of 1) the and Laborr, so well a other part on the Panjab, are posted ely in h in each national minimum, and the I increments Gir true would gladly at all il merated in Captain Cole's report calcut up itt turn; but in you of the limited amount of fired Impered and Provincial, that could be in illiably apprepriated, such to was in can only precould gradually. Werk enough much unknowedly be said a and around the great course ed bells and Labore to justify the establishment of a sparute division, but his on the available fund will not admit of this.

14(1) Further the work of instoration of these limboscal and specially architectural to arts in building r necessarily preuzed with caution, Indiana and arries to e and the appearation of the entrasted to an expert, or an officer who may make the well a special study. In the absence of my specially qualified utilizer, the beautiful in an appearable to train him up for the S. a under Captain Call of appearable affects, and this can be best done is assurating > jun a ufficer of the Public Works (19) to 11, and atracking from to the Executive Division within which the building to be first to en in hand are duated

"R) its rion -To men us far a possible the upl of the Comment in India, II. Homer the Lieute. stefesterme has resolved, as an experiment in a tree series ; the the hamation of a indictivities and it is interest of a ying order in Phile Works Department to take charge is in. The pay and offences the off or wall to become be the I correct, and be will, in r' r continuince; a with, and under the approval. The Cura or a Ancient Manuagues, arrange the plan of the report and preparathe finites, also will then be laid before the P = in Correstment for accessing, formal cancilon, and allocated of funds from such sum as ity from time to time be granted by the Consentation of I day, supplemented by whater funds a may be if per thin to give from Provincial south

In conforming with the views, His Historie that I insternite discoverage is plate as to appearin Lieutettant Aldrat, R.E., or the charge of the oce orche prival auto-division. This efficier

will be in the first instance attached to the Lahar Provincial Dicheson"

o A revised a timate for repairing the Nor Mahal Gatoway had been sent to me for remarks on the 4th December 1882, and A reclassification to the New Mahal G in ay was returned recommended on the 13th of the month

to From the 21st to the 31st January 1883 I was ungaged in going over the various buildings at Labore, Delhi, and Jullundur lespect a buildings at Laure, D. El and fa andlar with Lieutenant Alibott, R.E., and subsequently submilled the following inspection notes to the Punjali Public Works Department -

> Notes on Buildings at Lahore. Assf Khan's Tumb at Shahdars. Sur 1 - of estimate for Rs. 3.761

The table me arry of the wall has been pinatered up and panelled. This are done with my knowledge and do not report follow the all line of the drops. The home face hould be removed at once, and, to present further ruin, only the cap in the work able to a life king pry.

The dr mage half and and dome should be an olded for by pipes to energy the water

greated the walls.

Il fill on an mal i hi that ten on I covered y adging with a mini I of the parent be to be thene Ary paned wor at a har been done health to see soyed.

If floor the tomb is to be concred with the true.

The graind and Ant Khan's Timb should be taken up and to ged from culti-area. and then juried.

### 7 Ir's Fresh at Shahifera

The present relaying of the mismic perface is flone in too patchy a way to on are that the ters our rendered uniformly untrodught. The whole o a d James of States and States I gradually relaid in temp of say car o test square. Fire t mart 10 to 1d de get in 110 erlage epitace in this patient with it ensure beite fittung. Ti do the will require very great case in taking up the most. The mostly work world be table out on a tall of the same of the some under treatment; dam 1. I number the add to 1. I replaced by new on 1; the whole relaid on the term 1 head in coment. The true on 1 the possess to the Lomb and over the vertical about the done fir 1.

I have recommended the expect of the groce on a port in lin and it to wrive at a rave

tor the wholm.]

The a lie of the versualsh should be he lef whiten, he and the the work carefully channel. The grounds benefit be taken over and last out on the old lines of the garden, the present areas uml i cultivat it being turted.

If have recommended in expenditure the year of Ric 3,000 on works and Rs. 25 at on

the reciral of the grounds.]

The endourse arraides and emerge trailidings should be freed of all the modern partit and wal the twee in read by the relieve authority of server mill the done it will not be per he to judge to else a roll to lung with the old tracture. The in sail a manufact of the man Albott' saint to for the wal amount at Ra 332

The encroschement of the Royl should be very carefully watched.

### Shublimar Gordons

I approve at the estimate framed by Lagrangians Alibort for suprovements to the Shahlimar fiaril es, but the enclosure will requisit i nit an estimate i sild be framed for straightening the position Min Content. that are day to a soul aut of the perpendicular,

Any repairs or robuilding should be in perfectly plans by k manarry, and no ornamortal

reac plast ing n to be renewed

The pill of should be able to see the extermes of the two gates are that are ornamental with coloured tile work. This tile work is a good deal damaged and should be secured by computery the fractioned edges.

The building marked on the plan as the literbyah is of no importance, and its demolition would improve that part of the grounds. If have seen Laurenant Abbott's committee and have recummended an expendature this year of ils. 4,000.]

#### All Marian's Tours

This hadding sands on the such side of the Shald mar coad opp to the Carab B of The Touch has been guited or all it urrace man eary. The All Male o Tout. with brick wark, and to remove the malls which black ones the externa archivage.

Near the Touth is a bu dir. worth preservation, covered with beightly coloured 1 1 11 al add be freed of all its modern aiddit ins and the ille wick - up 1.

A path should be made from the high read to these two buildings.

#### Soulakis Herry.

This building bandd be taken in trand before others in the Feet.

The parapet to be restored. The mart le chujjas with their architeaves and brokes to be mad good where fallen. The otterne markle a trabe renewed where it place he been taken by plaster.

The short of the payation to be related in markle. All painted putty or cemen, to be removed from the minutes, and all musau work to be innovated where there is suff. I mes for the pattern.

The rest to be made perfectly water-tight, the madern painted work to be hit as it is for

il pracui.

The murble serven-work thinking the paylin to be required and a society

All white and solour washing to be removed from the masoury work in the Shich M. but and Palme buildings. [Linutement Alabori has framed an estimate which I hav seen and recommend d.

The it a separate building in the second comments of the second comm The read terrice arrowaling it has been re-veil the The A Person of The come the ill i y d if h wer rim i ld bu rep wed an ham 4 Plane and the tile was proceedings.

Regimentary Massid is worth preserving, and permission should be obtained and the building taken on the Nursl list.

they mercura Margari. All tile work to be cleaned and preserved, where mossvary, by edging.

The latter church should be replaced.

Makbara and Marjid of Khanja Kanana Mahmud at Regumpura.

The dome and lower masonry of the Tomb may be repaired and the interior painting on plaster chancel.

Mathers and Magde of Khunge

Michigan Short Belgrant.

7 of Parell.

The Mosque is only worth putty repairs to prevent it

Vallary Ship Helanal, were B campure, is worth only perty repairs to the masonry walls and domes,

Touch of Frence Parmes, near Regumpura, is worth july repairs only.

North on Buildings is the Juliumpen District, Punion.

N leader-15 mile from Juliander and water, has two touths of om treatile in its and interest; said, in the large effects of antiquionae entires Trusha of Naturality in the Punjah published in 1873, to have been tault in the I without them with Mr. Harrington, Ka attecking in Influedor, and Lieutennin Abbut, on the 188 January han. The larger timb is square in plan and is brick in any, a core in of the Umperor Jahangir. Larger Tomin.

ered outsule with brillians sue work of the mosaic cla. The interior is placered with chairsin

and slightly decurated.

The structure has been freed by Mr. Harrington of modern doors, &c., and as in conveof remain. The structure is in fair order, but the terroce on which it is raised triquite relaying, and the tile work to a good deal decayed on the muth, south, and case side. The west side is in at d order excepting the lower portions, which appear to have been withilly removed. Mr. Harrington wishes to restore the the work, but the cost would be great even if the work could Is any locatedly done. I think an exportment might be made to reproduce our panel, but the the tile work aboutd be preserved by cleaning, washing over with silicate wash, and origing with coment. The colours impleyed in the patterns are minimum-voltage, green, white, dark blue, turquoise, deep macoon, orange, many of which are not produced by the modern tele-workers in India.

The repairs to the interser of the tomb hould leave it as originally, and no new colouring in the planter or chunain work. The slove and other openings should be closed by learn have let in to the wall near the inner surface so as to leave a good "reveal." One opening

should have a wicket in gue.

The lower part of the exterior variace of the clome wants cleaning up. An invented band run round the lower part of the dame maide the tumb, and would probably give the date of the to dilling and mane of the person for whom it was erected. A ground plan should be made and outline closurous and accious. A photograph should also be taken to show the west facule. and details drawn of the tile panels.

The smaller tomb is octagonal in plan and has the appearance of being the older in date. Mr. Harrington to removing the modern deers, Az and along Smaller Tomb to repair the atrocture. The in riprior in the building will probably give the correct date and information of the hadding. It of much all a ed to have which, where not carried with the work, second to have been originally pointed. Now a number ed vulgat modern Sixti paintings cover the scalls, and their comoval to show original point of brak urian would be no disadvantage. The tile work u of a singular class being eigen by brick and entirely geometrical in pattern. Yellow turquase, dark like, green, and a varies and blue, are the colour used. The repairs to the interior thould have the appearance as ready like the original design as possible, and as in the case of the larger building the opening should be closed by iron burn, one being fitted with a floor. A plan unline elevation and excreme should be made and a plungraph taken and details drawn in colour of the different tile patterns.

In removing planter from tile work or the brack surfaces of the wall, rare should be taken to from it by native vinegar on and water, so that it may be removed without injury or seruching of the work underneath.

I have not seen the estimate for repulsion the Nukular touth, but have recommunifed an

expenditure this year of Ru 2000.

After rading Nakodar, Mr. Harrington, Lieutenant Abbott, and I went up to me the work in progress at Nur Mahal. The principal gates y of the New Mater Saral built by Nur I han, the wife of Johangir, is being to 1plately consected. The inschire has been rendered ecure by Mr. Harrington, and the carrell masures of the facade is in prices of being resured at a thorough manner by that other. I have both photographs tiddeers; of the Samit. and plans of this building, but a complexion photograph should be taken of the fands to dilustrate what is done.

#### NOTES ON HUMBINGS AT DIEIL

Tomb and enoughe duran as Jamus Kamali. - The principa in the macours of the mosque his been done too heavily and its grey. It should be light possible and of the same colone as the same. No mere plants James Rowall - 1 100 Kutitle Montplex. than all simply necessary should be used anywhere.

The majorals or western mehas of the mesque should be cleaned.

The finial or pinnacle of the central chara of the minique has been incorrectly reasons and should be removed failing more such the information of the Griginal surface of the de me it would be better to colour the planter like the manner, not grey to at pro- in.

SERTCH AND FLAM OF THE UP IN THE AT BAULGAT IN HUNGFELL

2. The most important building are on ridges, but many are sentered to the bill-sides, See sketch. Those in (A) are known to Mazam Shah, and should a a first minimum be freed from define and earth.

The upper building (1) is somewhat on the plan dwen in the sketch. There are demed chambers, all of which should be emptied of dubeis down to the floor-level. The second building (3) has a somewhat similar series, which are all o to be cleared out.

1 The buildings at (A) are to be put first in hand; then those at (B); then these on the other axis of the tream at (C). Great attention is to be paid to the following -

(1) No walls are to be broken down or damaged in chegging.

(o) In clearing away mattle from walls the excavation are to be carried do a to floorlevels oc to the ground

(3) The earth exercised in to be easefully a ched for earthigs or come.

- (4) All carvings to be carefully marked as coming from Sanghao, and a note made of the position to which they were found. All sculptures to be brought into
- 4. A sum of Rs. 800 will be available at unce for this work, i.e.

Clearing jungle from bulldings.

Excavation.

Carriage of carvings, &c. to Mardan.

Reports of what is done and progress of the work to be sent to me.

### Buddaist remaint at Rangal. in Eusefini.

t. Heahim Khan, of Zeila, went over the ruim with me, and is acquainted with the position of all the hillings noted on the sketch plan.

2. All jungle to be cut diren so as in show the walls of the different runn,

The large Tope as (1) to be cleared first, and a shaft or well large enough to hold a man sunk in the centre down to the original ground surface.

The Topes No. 2), (3), (4), (5), (6), and (7) are to be cleared and bored in the centre in a

emilar way.

The passages in the walls of the First at (A) and (B) are to be next opened out. The wall under the homispherical dome at (8) to be opened and cleaned.

A small square Tope further north to be cleared and examined. The walls beyond this are to be cleared of debris and examined.

3. A road track to be made to the inarest road, and the shortest path up to the Ranigat

Fort from Nogram to be made passable for the carriage dawn of carving 4. All carvings to be charly marked to from Ranlgat, and notes taken of where any stones or coins, &c., were dug out. They should be removed at once to Mardan and reports are to be made to ma of what is found and of services rendered by Asard of Totals, or any other Khudo Kheyis.

5. A sum of Rs. 1,20 will be available for the work, 12,-

Classing jungle. Excuvation. Carriage to Hist Mardan. Improving path down from Rangat.

7. On my return to Eusobai the end of March, I found to my regard that the Ranigat week had come to a stand-still owing to demurbance among the Rament (March). Khudo Kheyls.

8. The Saughao explorations were, however, proceeding most on 1 or ly. Col. 1 Jonlans showed me a large number of acadeures that had been Route of Sauther exceptions (March) brought late Mardan and deponited in the Reg mental M me at the Fort Mora were coming in,

9 A report, dated the 10th March, by Lieutenant Youn inschand of the Guiden, tiethe small Verights and repeat the work as he saw it in the 5th and fall Morch. The sites at Sanghas and at Tangi had been opened out and 95 work and friendly. No cases of tampering with the sculptures had occurred.

10. On the 30th March I went over the on at Sanghas, Tangi, and Nuttu with the same of fanghas (Rame).

Native Officers of the Conden and saw all that had have done.

tamped of Samples (Many) up to date. After I had left, a fresh site near the old rillage id

Much Khan was opened to and a number sculpture descurrent oil set in

11. I returned to Marsian on the 21st March, and remained there in camp pending the decision of the rement as to proceeding with the Ranigut es-Marking all that one scale pleastions. During this time I was occupied in marking and numbering the sent tures that had been conveyed to the magaalire, and in selecting the best of the curred mones for photography. Mr. Serros, photographer

of Peshanar, came to Marilan and took 72 photographs for me; most of these (numbered t to 33) are represented in the outline drawings which accompany this, and I think Mr. Secret The regatives have here sent home for printing by helisdeserves great credit for his wich. gravure, which is a permanent process.
12 When I visited Eusufzai in 1882, Cokinel Jenhins draw my attention to the objection.

to employing companies of Sappers and Minim in explorations. Othermous to employment of Sop-The village people dalike soldiers being quartered or them.

Provisions are not abundant, and disagreements are apt to bee k out.

17. On the other hand, local labour is cheerfully furnished on payment. The inhabitants profit by the work and are quite capable of performing the time by the a parent th eati untimity without either wantonly dimaging the rules in dirging or defacing the sculptures when found. There is thus additional advantage, too, that the villagers are anxious to point out fresh sitts, which they never are in the case of Suppers, whose presence they dislike.

14. From all point of view, therefore, the cap diment of utilizing the local labour has been a complete success, and fully justifies a communance of the system. The cast is most moderate compared with the ex-I speniment of wood loved labour a Five hundred and three pieces of confirme of all eles were proрен ег раушу ег Ѕаррата. cuted and landed at Labore for Ry 510. This gives an average of a little over one super per scripture where the average in the case . S piper between is often much nexcess of R. 10.

15. I have already submitted on a recommendation, for the continuance of work through Jemadar Kalela Khan, and ant convented that by rewards to sillagers for beinging in discoveries, and by annual event ations Lucinome todathors for Intern mit. at the on 1900), a compl to series of arcticological and artistic evidence will be collected and

preserved for the speculation and deductions of the scientific and learned world.

the Before directling the various mulptures that were uncarried from the buildings, venture to make some general remains at the singular character of their architecture and consinent. ### (SHEETS & AND 7.)

- i. Plan of Buddhist house and granary at Sanghao.
- 2 Section through domed granary.

34. As I have just mentioned, this building affords an accelert example of forms of strusted out of horizontal overlapping layers or it go. We find his serifest prototype in the Treasury of Afrens at Miller her her No. 4). The Jains used this construction in their temples, and to the demonstration of the temples at Abo, Chittere, Udaiput, and elementer are made the and he he not elaborate and beautiful ornamentation. Besides the peculiar construction to the dome, the anode of cortelling out to corners of the square chambers, to form an increase of the dome, is in use all over India to Muhammad in buildings. Limit place the first ring of the dome, is in use all over India to Muhammad in buildings. Limit is saw the Sanghap Granary I believed this method to be essentially Mai. In the same the no doubt that the Granary is Budding and concemporations with the Sanghap can be no doubt that the Granary is Budding and concemporation with the Sanghap about the breginning of the Christian era. There exiled the inding age by been ancient mill ores for princing curn were found in excellent the chambers. It may have the previously used a a treasury. The masonry of the walls and do so that and most carefully pointed with thin slabs of slate and atoms. The only community is an item of the three-stomed chambers were thus very arrely had in carved images or inagments of sculpture were found at the sate.

### (SHEET No. 8.)

# Plate 3. Plan of Buddhist Monastery near Sanghao.

35. This is the first building that was excavated. The basement where the sculptures were found is rarlier and more oblique than the surrounding walls and upper story. I marked and numbered the de-Sauchan Atomastery,

Coveries with the letter S 1 to 134. [Including an earthenware lotals.]

36. Two copper come and a brane ring were found in the Treasury in earthenware jars embedded in the floor at the corners A and B. The coins are those of Kanishka. General Conninghum has been good enough to examine them and to give me the following description:— Both of stair coins are of King Kanishka, whose name is always pelt Kamerki on his tains. On the choose of both is the king stanting with his right hand pointed downwards to a small altar, and his left hand is the king standing with his right hand pointed downwards to a small aliar, and his left hand resisted and holding a spear. The inscription of which only taint traces now remain is "Fac Kashter," On the reverse of one is a male figure standing, with his left hand on his hip and he cold hand holding out a wreath. Inscription nearly oblicerated "a en," or the God of Firs. On the reverse of the other there is a running figure, holding up his robe with both hands. Part of the leavingtion will remains "o. A.O. which is the Lend for wind, and the lighter requirements the God of the Word. The date of Kanishka is still insectiod, but I am antished that he must have been reigning from about \$5 to 120 A.D." It may therefore be conjectured that the buildings and decorative sculptures of this monastery date from about the

37. The stone figures and fragments were found at the places marked C. A few plaster figures were found at the places marked D on the basement Sunghan madpurers, plan. All the sculptures are marked S and numbered.

They comprise 132 pieces of all eites :-

(1.1 Circular frieses of figure subjects that adorned the small Tope.
(2.) Panels of Buddha and worshippers used in plinths or untablatures.

(3.) Two figures lincoling and supporting a supersenture or entablature. (These resemble the attitude of Atlas supporting the carth.)

(4.) Two Counthian capitals of Indiated pillars.

(3.) Fourteen terminal figures of tions, and one figure of an elephant.
(6.) One complete panel (rather wrather-worn) of the birth of B ddha.

(7.) Numbers of small square pilasters with Counthian capitals and figures carved on

(8,) One circular disc with a sculptured edge, probably used to surmount me of the

### (SHRET No. p.)

Plan No. 4. Plan of Buddhist Monastery and Tope at Tangi near Sanghao.

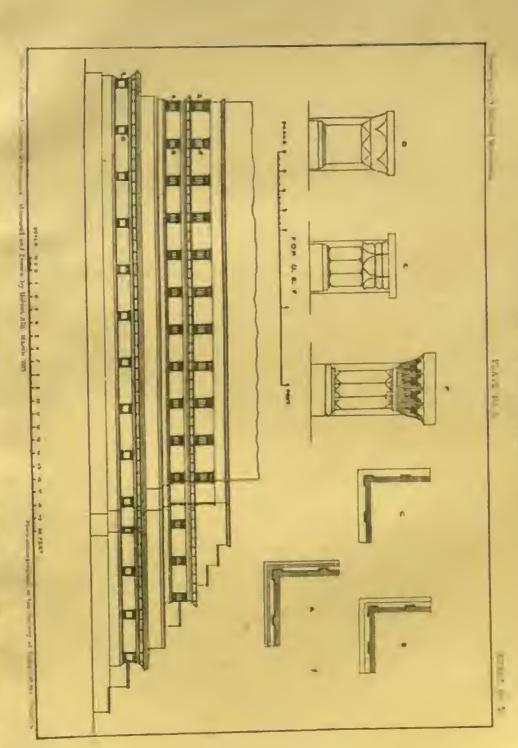

38. The buildings at Tangi are important in respect at least of their size. The Tope, which rests on a square basement, was faid bare, but only a few planter images were discovered, and the planth found to be faced with planter. A thait was sunk in the centre of the Tope, but no relice were obtained. As the earthwork was very heavy, and no stone scalptures were uncarthed, the plane was absorbed. It is possible that some of the chambers shown on the plan were used so thapels, and a further search is desirable, by clearing the buildings of the accumulations of earth.

### (SHEET No. 10.)

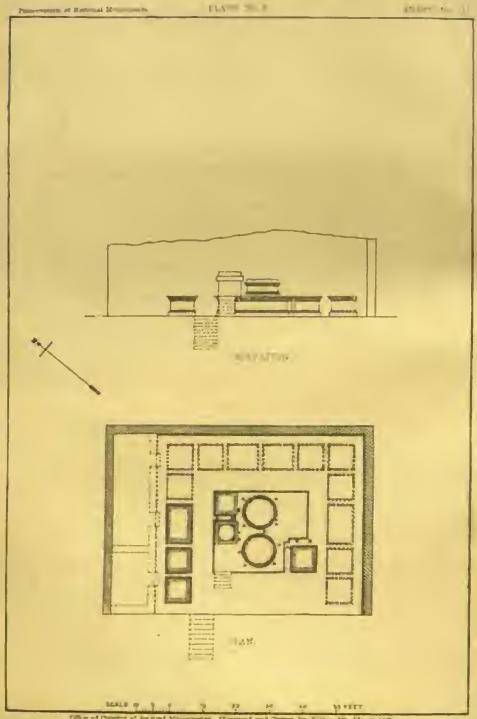

# Plan No. 5. Basement and details of the Buildhist Tope at Tangi near Sanghao.

39. From the less of the Tope some more important results were to be expected, but it making che, the building land bare affords a good alea of the Denis of Tope at Tope at Tope at Indian transper of pilanters, in the same way as occurs at the Shigh Posh plaster and decorated with ranges of pilanters, in the same way as occurs at the Shigh Posh Pope at Jelluintual, where Jenisdar Kulch Khan was at work thring the Alghan war. The Tope at Jelluintual, where Jenisdar Kulch Khan was at work thring the Alghan war. The temperature of the mouldings and capitals in the Tope rather indicates that Tangl was a monumery of the second or third order, but of this it is impossible to speak with surmanny until the which are has been explored.

# BASEMENT AND DETAILS OF A BUDDHIST TOPE AT TANDI NEAR SANGIMO EUSOFZAL.

### PLAN AND ELEVATION OF UPPER BUDDINST MONASTERY AT NUTTU NEAR SANGHAD, EUSOFZAL

### ISHEET No. 11.)

### Plan and elevation of the Upper Buddhist Monastery at Nuttu near Sanghao.

an Although covering a small area of about 80 fort by to feet, this site yielded some very Upper Mountary at Nums. Interesting and staborate sculptures in stone, most of which were found at A A A round the two small central Topics.

Pieces of plaster figures, &c., were found at B B B. All are marked N. U. A total of 79 large and small fragments brought away, including those more particularly described, cursus of the following :-

1 to 4. Figures of danking women under a tree (see sheet No. 14).

5. A seated figure of Buddha.

6 to 10. Sandry figures.

11 to 19. Square pilasters with Coeinthian capitals and figures untile shalls.

20 to 32. Sin Il figures supporting a superstructure in a position resembling Atlant 28 to 36. Seated figures of Buddha and surrounding attenuants or wershippers. (In No. 45. Buildha is represented with manetachies, the only example that General Canalagham has yet oren.)

37. Long frieze (see theet No. 18).

39 to 43. Pragments of terminals, five with lions' heads.

44. Base of enpiral.

45 Part of Corinthian capital with a figure of Buddha.

40. Niche (see short No. 19).
47. Frieze, rehe Tope and fire altar (see sheet No. 18).
48. Death of Buddha. This is well carved, and has a plaster on each side.
49. Niche or chapel. In the centre comparament is a representation of Buddha's turban and hair which his cut off before entering Buddhahood.

50. Worship of Trisul emblem and flag (see sheet No. 24).

51 Prieze with horses (see stires No. 25) 52, Bieth of Buddha (see sheet No. 17).

Strutg tragments of the

### (SHEET No. 19.)

### Plan (No. 7) of the Lower Buddhist Monastery at Nuttu near Sanghao.

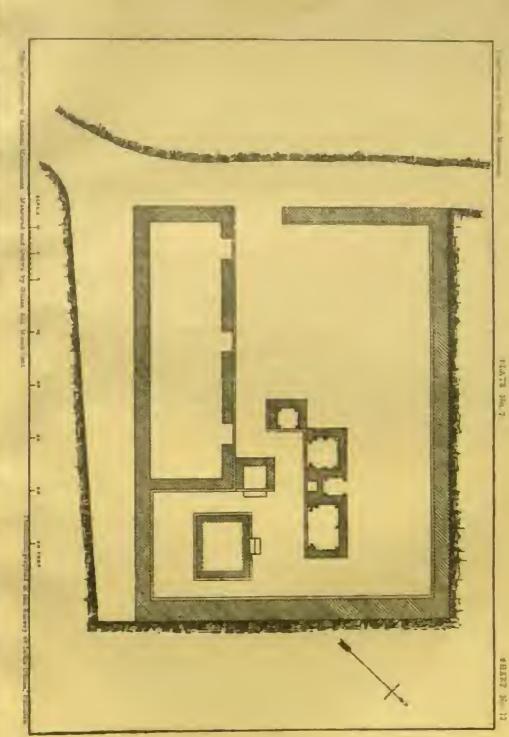

- 41. The hill had fallen and overwhelmed the group of buildings, but the three small chapels that were excavated yielded 70 pieces of stone sculpt are Lour Bonnatury Natio, and 7 plaster hands, which were removed; but besides the ... there were many plaster figures attached to the walls at places marked B B which it was not worth while to remove. The stone carrings were found at places marked A A, and were all marked N. They are generally as follow:—
  - 1. A horse-shoe niche or chapel (see sheet No. 19).
  - 2. Death of Buildha (ore object No. 22).
  - 3. Part of a nichn or chapel. King and Quren on a couch (apparently the came persons as represented in their No. (n), musicians in an end compartment, one was playing the harp, one playing wint looks to be a guitar or "Bina," and a figure thumping A bug drum.
  - 4. King and Queen wated in a palme (see these No. 50)
  - 5. A scanding figure of Buildha with attendants, and a pro-trate figure at his feet. A carele on the left.
  - 6. A kneeling figure supporting a Trisul 'see sheet No. 21).

  - 7. A kneeling figure worshipping a gartnash.
    8. 9. 17, and 18. Parts of frieses of standing figures some with a nimbus encircling the head.
  - to and to. Parts of frames of standing figures with halos and umbrellas of state over them
  - 11. Panel of a seated Buildin and worshippers. ta. Part of a circular frieze with two panels between columns of mated Huidhay, each with two worshippers.
  - 13 and 24. Parts of circular frieses—Roys and garlands,

  - 15 and 16. Fragments of circular frience-Panels with figures between pilarten or a human In one panel is a representation of a Tope or Stupa.
  - 20. A seated figure of Buddha-floy with a plough and pair of Indiaks on the left in the mar is a man and home
  - 21. King and Queen in a palmo seated on a throne, with their feet on moch. An awence to scated on a steel in the left; on the right is an attendant.
  - 22. Seated Buddha in a horse-slave mehe.
  - 23. Seated Buildha in a tr 1 niche
  - 24, 26, 29, 13, 34, 35. Pricess of small figures under horse-hoe arches with intermediate Indo-Persian columns.
  - 27, 28, 30, 32. Fragments of a circular frince, with standing figures.

  - 31. Straight frieze of small figures stand ug. 36. Part of an Aramthus capital, and scared figure of Buddha in the centre.
  - 37, 38 and 39. Parts of a Tire which surmounted a Tope, the wheel a shart 15 makes diameter.
  - 49 to 43. Fragments.
  - 44. Base and feet of a stanting figure; and als are on the feet, with a large fution between the hig and next toe.

# Pian (No. 8) of a Buddhist Monastery at Mian Khan.

to This must have been a place of importance, and yielded a considerable number of fine sculptures. The site was broaded after my to 1 of inspectant in March, aml 1 only saw 30 of the aculptures which were brought into Mardan before I left. There are time a possible for me to examin. Judging from the plan, there should have been about eighteen small Topes, most of them on agrar interested A.A.

### (SHEET No. 14.)

### Woman and Eagle, Plate No. 21.

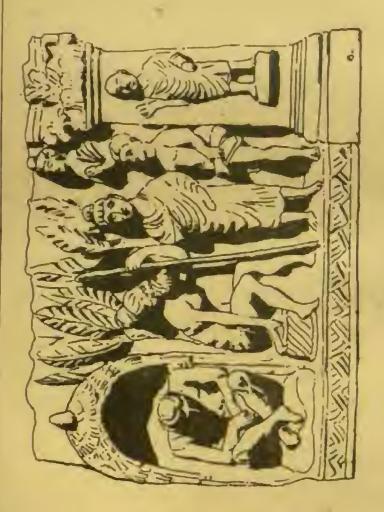

Weener and Eagle. S. this is a very curious piece of sculpture from the Sanghao building (see plan 2, page Weener and Eagle. S. this found among the same roins, and a similar, although more broken, sculpture was uncarthed at the same place. The subject occurs again in a fragment dag up at the Upper Murasury at Nuttu. The representation is evidently traceable to some legend, probably local. General Cummigham is unable to say what the meaning is, but only presses that the figure is Maya, the mother of Buildha, being curried up to the Trayastrinsha Heavens after her death, where it is said she was "born again."

[Nors.—The subject, General Crimingham new tolls may be organized by the famine matter of Agrayments bring examined by Jupine's Eagle one status of Conymete after Locciness in the Validat, illustrated in Val. 1, Lables (risses) of Scaletore, page 587).

### (SHEET No. 15-)

### Buddha and Assetics, Plate No. 23.

44. This is part of a frieze with plinaters at intervals found in the Sanghao rulin (see thest No. 11). The stone has become very much decayed on the nurface. The subject, General Canningham tells me, is the valit of Buddha to the enaciated Tirthika Uruculum Kasyapu, an accetu, who lived in a forest of bad tress. On Ruddha's left is his courin, the evil-dispused Devadatta. Beyond Uravilwa is a very life-like figure of an accetic bowed down in contemplation.

### (SHEET No. 16.)

### Buddha and Nagas, Plate No. 24.

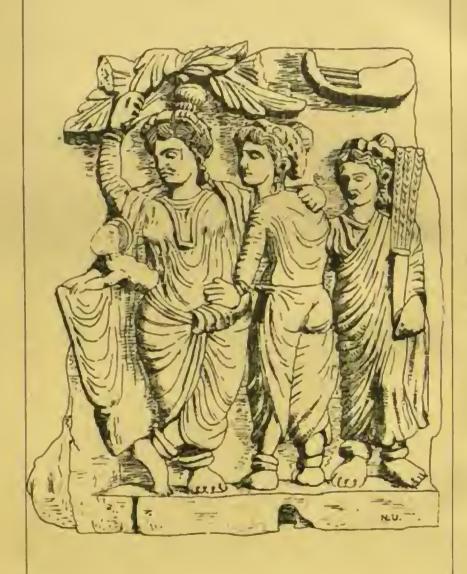

45. A roughly executed largerelief found in the Sanghao tuins (see sheet No. 11) which, like the preceding, is probably one of the subjects placed between placeters in a frieza surrounding the Popes of the Mon stery. It represents Buddha visiting a king and queen of the Nagas; Devadatta, Buddha's heatle course, stands on the left of the saint with the usual thunderbolt, or whatever the symbol is that he has in his hand. The meaning of the some or probably that Buddha has been entrapped by Devadatta into visiting the Nagas, here represented with makes above their heads. As in similar failes, the divine influence is too strong, the Nagas fall down and worship him instead of doing the wished-fur harm. Devadatta, enraged at his want of success.

### (SHEET No 17.)

### Birth of Buddha, Plate No. 14

46. A broken portion of our of the panels which probably found a place between plasters in the plinth of the Topes of the Upper Monastery at Nutta. A complete bas-relief representing the same subject was uncarribed from the monastic buildings at Sanghao. The import is of special interest in the history of Buddhim, which General Canningham at once identified as the Birth of Buddha. The right half of the panel is wanting. On Maya's right should be Brahma receiving the young prince who was born from Maya's right side, and beyond him Indra with a second strendant. The child, with a halo round his bead and the death held by Brahma, can be usale out. Maya is standing under a sit tree; her right hand is caised and helding one of the branches; her left hand is round the shoulder of her sister. To the extreme right of the panel is a famale attendant with a chaori of state, and above is a herp vignifying heavenly music.

### (SHEET No. 18.)

### Selection from Plates 9, 13, and 15.

47. All these sculptures are from the Upper Monastery at Nuttu (see plan 6, page 15).

The sculpture on the left is one of a group in plate 9, and represents a pilaster with a Pilaster. N. U. And Prizza R. Corinthian capital and a foliated base, found at the Upper U. Vive Frizza, N. U. Monastery at Nutra. There are three standing figures carried on the surface of the shaft—Buddha in the centre, an attendant with at chaori on his right, and Devadates on his left. Secural similar pilasters were obtained at the same spot, and were no doubt used round the plinth of one of the Topes to alternate with panels of search Buddhas and

worshippers, numbers id which were also dug up, and correspond in height.

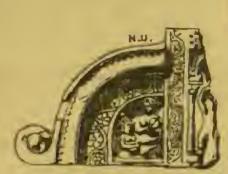

The long panel of vines and boys forms the subject of plate 13, and is the only one of its class found in the Sanghao neighbourhood. It appears to be more uncient than the other sculptures procured from the Upper Menastery at Nutru (N. U.), and certainly resembles the Byanntine view carvings which Mr. Fergusson thinks bear a strong resemblance to many of the Gandhara bas-calles. There can, however, be very little doubt that the age of the Nutru structures in an early as those at the Sanghao site, i.e., about the commencement of the Christian era; but if this is the case, the art of Constantine's time must have taken expression after the Eucofan structures were built. The subject represents a general feast on grapes. In the centre two boys are struggling for a bunch. On the right is a goat or some animal, and beyond a boy eating. On the left of the contre-is another boy quietly engaged in the same occupation. The whole panel is cuitiously antique looking in the remitering of the figures and leaves, but is not without a certain degree of life-like representation.

Plate No. 15 represented at the top is part of n circular band or frieze found at the Upper Nuttu Monastery, and surrounded one of the small Topes. The panels are separated by small columns. The one to the right represents a fire altar or funeral pile. The fire is being ferl by two Buddhist works pouring of out of glassar. The left panel topresents the worship of releas, probably funereal relies, by two shaven manks. These are the only two scenes of the kind that

have seen yet in any Buddhist sculptures in India.

#### (SHERT No. 19.)

#### Selections from Plates 8, 11, and 26.

48. Plate 8 contains four pieces of sculpture, out of which two are here outlined. The first, from the Upper Nuttu Monastery, is a fragment of a chapel Habry 3, 21, and 22. Municially in sinhs. N. U. Hishidan standard on same N. U. Supporting figure. N. U. Supporting figure. N. U. Kang and Queen gambing. N. or niche representing two women, one playing a dram and the other a larp. Although it has not come out definetly other drawing, the latter has comething in her hand which may be a

as being used to sound the ancient harp. The small drum is beaten by a stick at I not with

the hand

The fleral and foliated borders are similar to those to be seen on the Sanchi Gates, and may be traced back to Grecian ornament employed in the monument of Lysterates at Athen-

(B. C. 334).

The second sculpture, taken from plate S, is also from the Upper Nuttu Monastery, and is that if a doneing-girl beneath a tree, a bough of which she is helding with lier right hand. There are shree other smaller figures from the Upper Nuttu Monastery—one holding a bought with hier right hand, it would thus appear with hier right hand, the other two holding boughs with their left band. It would thus appear that they adorned the two sides of a niche or some important sculptured composition. two holding with the left hand have their left leg crossed over their right, and those holding with their right hand, their right leg crossed over their left. It is a symmetrical ballet in money two thousand years old? The figures are draped about the body as well as about the limbs. They all wear girdles of four rows of atones suspending a leaf, ankless on both free, a necklace as well as a neckles, and hangles on the wrist. The hair is wared over the foreirrail.

a nocklase as well as a nockless, and langles on the wrist. The har is waved over the forehead, and plaited late a nort of wreath over the head, finished by two knobs. They all wear tolerably large pendant earnings. The pase of the body is in each not wanting in grace.

Plate No. 11.—A set of eight pieces of carved stones were grouped for this plate, and two of them are livre depicted. The fact is a panel of Huidha surrounded by weedshippers. The poculiar halo or nimbus of flame cound the head of the solnt, and he standing on water, represent his power over the two most potent elements. The second sculpture from plate is is also from the Upper Nuttu Mona serv, and concests of a figure bowed with the weight of the superstructure he is carrying on his shoulders. At Persepolis figures are found apporting planths with applifted hands. The Caryatide figures of Greece support to their heads in place of coloring. The Telamones are another form of this kind of monest; but all these are server, whilst. columns. The Telamones are another form of this kind of support; but all these are erect, whilst the En and human supporting figures are all crouched or kneeding in an Atlantike attitude.

Plate No. 26 represents part of a nicha or chapel from the Lower Mona ery at Nutra. The Lower part is shown in the drawing. A King and Queen stated at a small take engaged in gain bling. The Queen is tested on a weed with her feet on a foreignst, The King is in a throne, his leet also on a foreignst. The right arms of both are on the table, the left arms of the Chicen is uplifted as if thinwing dec. In the teckground are two female attendants with charges. The King has a sort of jewelled plume in front of his turban. General Cunningham describes the upper part of the niche (not bere represented) as come ning Buddles's almost bowl under an umbrella as an object of warth p.

#### (SHEET No. 20.)

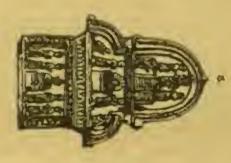

#### Group of Sculptures, Plate No. 20,

49. This is a group of six different pieces of sculpture; the three upper pieces are from the Sanghao Monastery (see thest No. 11); the three lower pieces are from the Lower Nuttu Monastery. The fragment on the left represents Buildha on a throne supported on lines. He is surrounded by numerous supplicants. The

"Representation of a changel or small temple—to the upper part of it is the famous traple ladder or flight of steps by which fluiddia descended from the frailyastrinship beavens, accompanied by the gods Brahma and India. At the foot of the steps is the our Pandarika who had been changed to a man by Buddha, who was aware of her wish to see him."

The aculpture to the right represents a tanding figure of Prince Sidhartha with an umbrella over the halo round his head. The woman on the right is probably his wife, whom he is about to desert in order to become an ascence. The left lower sculpture represents, says General Cunningham, Prince Siddhartha and his wife Vaudara. They are seated on a throne in a palace. The Princess has a wreath in his left hand. Columns with Corinthian capitais support circular arches on each flank. Serveral furners are represented in an upper gallery. The other pieces of sculpture in the right corner of the plate are part of a frieze, the upper part of which is a representation of tops radines. The lower part, divided into comparisoness by columns, represents the Nievana of Buddha, and a fire after, which may be his functal pile.

Nove.—Budden had been up to heaven to convert his mirror Mayn and descended to earth at Sentions (in the Etablish, North-Western Fronteen). "In the smalles of the hand-dress of Budden in the tamone Chutz Mass) which was carried to because by the Devia and worshipped."

#### (SHEET No. 21.)

## Symbol Worship, Plate No. 3.

50. The sculpture is from the Lower Nuttu Monastery (see sheet No. 12). The subject does not econt often. General Cunningham describes in thus :-

"A party of thaven-headed monks paying adoration to the Dharma-chakra, symbol of the wheel, which is surmounted by the Tri-ratua, or symbol of the 'Three Gent,' above which are three wheels or Dharma-chakras."

The attitude of the supporting figure with uplifted right hand is very like Atlas.

#### (SHEET No. 22.)

#### Death of Buddha, Plate No. 6.

51. This is from the Lower Monumery at Nuttu (see sheet No. 12). Plate from a Demand Maddles H

General Cannang ham has been good enough to furnish me with the following descriptive note:

"Navam of Buddha in the middle. Behind Devudanta, with beard and staff—the shaven must at the food are remake. Buddha's disciples. The men at the head are the chiefs of the Mallia a. The presence figure hong raised by a monk is probably one of the disciples who manted when he saw Buddha's disc." The bed on which Buddha is lying might be a undern charpoy, and the presence of a mattress and pillow show that civilization in the first century.

A.D. was more advanced in India than it was in many Western countries at the same period.

A piece of minute in rather higher tried representing the same scene was found at the Upper Nuttu Monastery. It is between two pilasters with Ceriniban capitals. Close to Buildia's bed it a tripoil from which suspends what looks very like a modern sola-water locale. but which was preciably a prirous vessel used for cooling the drinking-water of the maint in his

#### Gariand frieze, Plate No. 4.

52. Fragment of a circular lineae from the Lower Natio Monastry (see plan 7, page 16).

Plan Na. 6. Fram with garded.

This piece of sculpture has several introcering points about it.

The tyle of ornament is distinctly Roman, or rather GraceoRoman. Swags or gardends decorate the enablature of the temple of Vesta at Tivoli, which
dates from about 70 B.G. In the present case the gardend has a Haidhlitic signification. To
this day gardends of cloth are carried in procession in Burma 1 to adorn Topes or affected trees.

They are frequently represented in the Bharbut and Sauchi sculptures, and are seen depending
from the sources Bodin Trees and placed round Topes.

Two of the former large plants are related to the sales control to the delivery and are seen depending.

Two of the figures have wings—one playing a guitar, the other seems to be arriking a gong or small drain or tambianine. The two supporting figures are playing the drain and symbols.

<sup>&</sup>lt;sup>1</sup> General Countrighamerhum describes this occupants r—"Figures currying along andminted events estimated by more manifestata. In Survey I have seen these cylinders of figures mushin districted by toogs of burnlood from 60-22 200 four long current burn of the processing just as represented in this cruterior; and afterward burns of paper hely term."

#### Selections from Plates 9, 29, 31, and 32.

54. The frieze of horses (plate 9) and the three supporting figures (plate 9) are from the true, 30, 31 and 31.

Upper Monastery at Nuttu. The termining time representations are from Minn Khan (see sheet No. 13). Plates 6, 20, 21 and 31, Friesd of barren. W. U. Supporting agrees. M. U. Five heads. M. Friese with Pis-

The frieze of horses probably represents, in part, the procassion of the four kings to present their bowls to Buddha.

bers, M. Frienc with Bundless, 38, On the right is a broken representation of a reated Buddha with a bowl in front of him, and two kings offering him two smaller ones. The horses have bridles and head stalls which were not in use by Indians, and were probably introduced after Alexander's time.

The three sculptures of supporting figures or "Caryatides" show how very various were the attitudes given to these features.

Of the nine sculptures from Mun Khan, the five heads show considerable power of expression. The man's head (probably Devadatta's) is particularly good, and the tennale head on the right might be that of a Gercian statue. The friese below has a number of Indo-Persian

The two pieces of stone with boys and lions were probably terminals or enamental pertions

of a door.

The friend in the lower right corner is thought by General Cuntuugham to be part of a Jataka or "Birth Story" of Buddha, but he has failed to recognise it.

#### (SHEET No. 26.)

#### Figures represented in Plates 10 and 30.

55. The figure on the right from the Upper Nuttu Monastery is its good condition. General stand of Cunningham tells not that the rich ornaments and the mountained Ring. M. U.

tachus show this to be the figure of a king or some layman or rank. He also thinks that the figure on the left, from M in

Khan, represents Prince Siddhartha before he became a mendicant.

The head-dress and jewelry in both are most elaborate and ornamental. The dree-classic total in plate, page 30,—probably a sign of royalty,—occut in both these figures, and resemble the fastenings of a skin round the resulties of a statue at Sanchi. The annulate strong together over the right shoulder of the left figure are like those wormall over India at the present day. Lace or embraidery seems to have been known as shown in the drapery over the left leg of the sanding figure—

56. With reference to the disposal of the sculptures, I am of opinion that all the important

56. With reference to the disposal of the sculptures, I am of opinion that all the important pures should be retained for the Linkove Museum. These would be dispose up the drawings which accompany this report. They would also dispuse many of the other 503 sculptures. I therefore propose to make a selection from these for Lahore, and to dispose of the

remainder among the various Indian Provincial Museums.

s7. There is no doubt that a knowledge of the Candhara sculptures would be most interesting to the learned in Europe. General Cunningham presented a number of photographs, the negatives of which are in the Calcutta Museum. I have a set of photographs and negatives of the Sanghan bos-velief, and photographs could easily be precurred of the best inbjects in the Lahora and Calcutta Museums. Ceneral Cunningham proposes to get out a joint book to comprise all the best specimens of the Hudifhirt sculptures of Gandhara," and I agree with him that it would be a very interestationally.

58. In conclusion, I have a word to say about the scriptures that have been deposted in the Labore Museum. Some of them are labelled, some are not. More of them are arranged with no sure of systems where have immificient means of ascertaining where they came from. There are also numbered

tous daplicates which confuse the eye, and take up the already overcrowded space.

So, A selection of all the best pieces should, I submit, be made and arranged so a tit be

Constraint of the scarpears. well seen, and placed in grants, so that it may be at once apparent what came from each site.

to. A large map is necessary to illustrate the Ensulai country.

May of Employ,

Assument of the semigrants of more delicate curvings should be in suitable glass cases. At present a large number are placed in dark corners and cannot be proporty inspected; but if the whole be reduced in dimensions to a collection of single representations of each class and subject, the numbers of mores would be greatly reduced, and the best use could be made of the available space. A very considerable parties of the collection could be displayed in the entrance half of the Museum, where there has light and a large amount of wall surface, which is most suitable for has-reliefs, originally designed for and applied to an upright position.

62. The duplicate specimens should, I submit, be noted into collections for presentation to

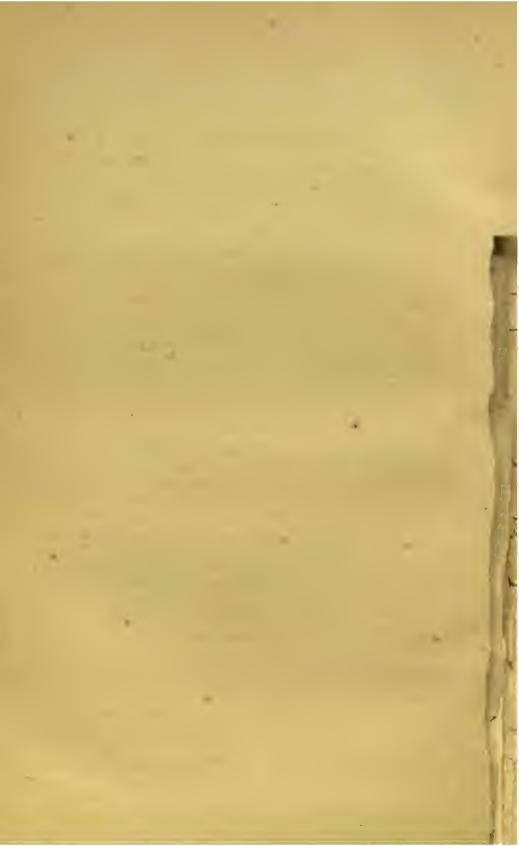

Disputed of deplease spectroms the following Institutions:-

The Imperial Museum, Calcutta. The Central Museum, Madras. The Museum at Bombay. The Museum at Jaipur. The Phayre Museum, Rangnon.

13. Casts of all the finess and most important subjects, whether at Labore or in Calcuttashould be made for the British and India Museum, or fix any other institutions that desire to possess a set.

These case could also be exchanged for representations or reproductions of line Oriental art works in the various European collections, and would in this way produce a more pradicable return than it simply charged for at cost price.

# Appendix K.

# Reports and correspondence, &c., concerning Ancient Monuments in the North-Western Provinces and Oudh.

1. In May 1882 I addressed the following letter to the Government of the Letter containing various North-Western Provinces and Oudle :excensuradations.

"I have the honour to . . . . ask to see the pocification or plans for-

1 .- Cleaning and framing the Sommath Gates, now in the Agra Fort. (I think these gates should remain where they are.

H .- Restoring the ceilings of the Dewan-i-Khas and Khas Multal in the fort.

III —Clearing and restoring the second parties of the Jahange Mahal (now our pied by the Provest Sergeant) in the fort.

IV -Clearing out the Birbal house, Akhar's office, Minam's bouse, at Fairhpur-Silvit

V - Preservation of the painted interfers at Sikandra, VI.—Repairing the Fattbour-ki-Masjid near the Taj. VII.—Repairs to the Buddhut Topg at Sarnath.

"All these works are of importance, and, if necessary, I would recommend the Government

ed India to contribute grants-maid.
"Some of the interfers at the Fatchpur-Siker Mosque, and the Mosque and its Jawah at the Taj have been repainted, but nothing has been attempted in the way of preserving eximing paintings, such as those at Sikamha and at Firmid-uti-Dowlah's Timb. . Some of the frescreen are excellent, and I strongly recommend that Mr. Heath he authorised to make experiments in cleaning and preserving them?"

2. I zgain addressed the Government in the following terms concerning the Samath tope:-Sarnath Tope,

"Referring to letter No. 396-C.B. and R. of 1872, from the Secretary to the Government, North-Western Provinces and Oudh, Public Works Department, stating that the Sarrath Tope might be left to deray, I have the honour to solicit the consideration of His Honour the Lieutenant-Governor to the importance of keeping this interesting and around Buildhin monument in a

"I have never advised or advocated any restoration of the tope, it being in my opinion merely necessary to secure the existing massary at the base by rebuilding it securely and by using mostar or rement to prevent the percolation of rain or growth of destructive regretation. Should the Government of the North-Western Provinces and Outlib be unable to furnish the recovery hand, I would recummend the Supreme Government to give them. For this purpose, however, it is necessary for me to see a specification and estimate.

3. The question of procedure as regards work in the North-Western Pro-Procedum as regards work vinces and Oudh having been considered by the in the North-Western Pro-Government, orders were respect on the 23rd June 1883 giving me the position of a Superintending Engineer as far as concerns the North-Western Provinces and Codh, and directing the Executive Engineer, Archeological Division, to submit all his projects and proposals to me before being finally dealt with by the Government of the North-Western Provinces and Qudh.

This ruling does not contemplate any connection on my part with the sub-sequent execution of the work which is supervised by the Superintending Engineers of the 1st and 2nd circles, but the Government invites my inspection of works in progress, and directs the completion reports to be sent to me.

4 After personally conferring with the Executive Englueer, Archaelugical Roof of temple of Govind Division, on the subject, I recommended and forwarded his estimate for repairing the vaulted roof of the temple of Govind Deo at Bindrabun amounting to Rs 9.327. This way

sanctioned, and I inspected the work in progress on the 1st March last. (See

Impection Note, page exliv.)

5. The Military Works Department wishing to utilise the space occupied hy the courtyard of an old palace in the Agra Fort, called the "Dansa-ki-koti," referred to me to know Danza-ki-koti. Agra Fort. if it was desirable that any portions of the building should be preserved, and on my representation, expressed their readiness (on the 1st November 1882) to keep in tact the ornamental frontage as indicated by me on a plan submitted to the Inspector General.

6. I examined and recommended the following projects estimated for by

Mr Heath -Projects

Patrance Gate, Toj Serat.	Repairs to the entrance gate of the Taj Seral at	Ha.
Sitandra Entrance Cate,	Repairs to the Sikandra entrance gate at Agra For replacing the gift copper paradles on the	1483
Planacks at Silanifez.	conduct to the Stranger cuttoner are of	
Thurst ween namedians	Agra	1,700

These were sanctioned by the Local Government on the 4th December 1882. 7. Mr. Heath's revised estimate amounting to Rs. 16,576 for inlaying and completing the repairs to the Saman Burj in the Agra Saman Berj. Agra Fort. Fort was recommended on the 6th November 1882.

A revised estimate for completing the repairs to the Khas Mahal in the Agra Fort had been prepared by Mr. Heath at my sugges-Khas Mahal, Agra Fort. tion, and by providing invisible iron joists fined with marble instead of solid marble slabs for the ceiling, the revised estimate of Rs. 18,160 was less than the original estimate by Rs. 57,049. The above estimates received the sanction of the North-Western Provinces Government on the 4th of December 1882.

- 8. In November I had forwarded, recommended, an estimate amounting to Rattan Singh's huilding. Rs. 1,290 for repairing Raja Rattan Singh's building Agra Fort. in the Agra Fort. This received sanction on the 30th March.
- 9. In January an estimate of Rs. 1,305, prepared at my recommendation, for preserving and glazing in the Somnath Gates Sammath Gotes in the Agra Fort, was sent up to Government. This has not yet been sanctioned
- 10. During February I was engaged with Mr. Heath in inspecting buildings at Agra, Muttra, Bindrabun, Aligarh, Budaon, and Ton in February. Jaunpur, and addressed the following letter, with inspection notes, to the Government. North-Western Provinces and Oudh :-

"I have the honour to forward so copies of my notes on the inspection of huilding sat Agen Sikandra, Fetchpur-Sikra, Muttra, Bushrahun, Aligath, Budaon and Janapur, and hope that the various recommendations may receive favourable consideration.

can that these gates have both historical and arrists interest, and should be protected from dist and dust. These can be no doubt of the purely Mulammad their enrichments, and that they never in their present shape adarned the temple of Sa It may be that Mahmud of Gharal used the wooden frame taken from Soumath and recurred in accordance with the artistic traditions of his age, but of this there is no proof. The gates are, however, valuable as works of Muhammadan art of an early period and cost us no doubt a large sum to remove from Ghazni. A similar case to met with in the Chittere Gates which

Akbar brought from Chittore and placed in the Machi Rawan, Agra Fort. Any evidence of Himbs art that might have existed in them has carrainly been obliterated, and the window surface is now covered with stamped or reposesé plate of brus outlined in Muhammailan ernament. The estimate drawn up at my suggestion for the Ghaeni gates is not very costly, and I hope therefore that S.r Alfred Lyall will sanction it.

The Lieutenant-Governor has on two occasions as used me that measures should be taken to preserve the Buddhist Topic at Somnath near Henarcs, but I have as yet received no official

intimation of anything having been either anctioned or communeed."

# NOTE OF BULLDINGS IN THE FORT AT AGRA

During my vait to-day to the Palace buildings in the Agen Fort, I was accompanied by Munco improvements with mass Lieutenaut Shone, R.E., Executive Engineer, Agen Division, dramate in ablemance Military Works, who is carrying out many alterations demns deed by the military requirements of the place. Some of these must necessarily interfere with the app rance of the Fort walls and lateries apartments. The reconstruction and maprovement of batteries, the improvement of communications and the treatment of Palace building, in charge of the Military Works Branch, may, however, be so considered as 12 do the limit damage to the architectural appearance of the various writtings.

(2.) In introducing new embravares, it is, I submit, possible to preserve the outline of the Old wall to a very great extent. The outline given to the retained as parapet may still be kept apparent on the surface of new masay work, whilst ramps and banquestes may be an examinated as to cover up decorated un-

(3.) The continued occupation of the econd passion on the roof of the Jahragin Muhal by the Provest Sergeant is most damaging to the building. Jakengin Habal When it is cleared, and I understand that reparate and sunable quarters can be provided showhere,—the whole symmetry of the river facade can be restored. The interior of the Palace Court could also be much improved by renewing talles chajias and by entering the partiams of the buildings which have fallen in

To obviste these, a series of gatoways or doors should be placed so us to enclose the building of storest. These many be a chi whidar to keep the keys, and to admit authorized vivitors. By some such means

afone will it be possible to render wanten in whish impuss ble

(5) The exterior launde of the Unmer Singh Gate is damaged in places by weather themer says Can. The tille work in the last above the archany is also decayand repaired, and the broken edges of the remains of the tile work, edged with coment, to pre-

# NOTE OF ARBIR'S TOME OF STREETING

I visited Sikandra on the 17th February with Mr. Heath In order to see the gateway to the west of the enclose e, which cousing repair, and to meet 1 2 4 4 1 I mail Klan, painter, of Delhi, about the resturation the furely-cohurred walls and done of the chamber in front of the passage leading does to the armal tomb of the Emperor Akhar.

a. The west gateway has gradually as uned it in guid super ance, and is a fine example of the architecture of Jahang's' day, bring well propurried. and the decoration applied with fullement. The project dame of the great such has been retouch if and bright in Jup by Mr. Supergrav Lawren ith the effect being excellent. The pre-research of the quarted design with the vertibe cartages the wall and doned ceiling is not only descrable, for the sake of the seneme and it appearance, but also in the interes so tradian art generally.

3 The walls of the perch of the tenth husbling are covered with should prevent of g 'der' and painted with Smake and damp have in part or implately deliterated them, but emergh remain to perm of Party of the Time Provide evaluation I had beyond that a provess of channing off the day and stame might have an evaluation full revealed the painting around the total and any color as the platter to greatly damaged, and ready to perluany local Khan o, therefore, in completely restore a small action of the wall surface as an experiment a until it successful the whole of the chamber should be trested " in capilar was.

#### NOTE ON BUILDINGS AT FATEUPUR-SIKEL, NEAR AGRA.

The Agra road approaches the confines of Fasebpur-Sixti from the east and enters them at a gateway, which has received a few necessary remains. the billings aroung the opposit approach Passing along the upper mad, rained heaps of some lie scattred north and south. This used to be a favourite quarry for the grindstone trade, but the with has been stopped. Before reaching the Nobarkhana, a small rextangular pavilion to withle to the right or north. It is of red sandstone, has a verandah, and is worth repair. Mr. Heath is preparing the necessary estimate for the work. (Mr. Heath's estimate is for Ra 8811, which soems to men very large sum for doing what is needful to prolong the existence of the building)

(2) The Nobatkhana, which was a rulned heap of delays at my last visit in July 1881. has been repaired and cleaned up, and now presents a good appearance. The imple but effective outlines of the four gate-

way haddings have been restored and brought into view.

(3) The old mins buildings to the worth of the road begand the Nobatkhana are greatly rumed, and thrould be cleared of doln's, and any dangerous Mad be type.

and or domes propped and surrupt med.

(4) The Diwan-t-am is still much runned, but its course pavison has been renovated, Desailess.

and not less of the flanking colonisade, usinh and south, have been reproved. In the parison itself are a number of painting, which have become somewhat industries. They should be received where necessary, so as to preserve the patterns and compliance the failed outlines. This remark applies to all gamed works at Faichpur-Sikri in which the printed outlines are atil sufficiently distinct.

(5.) Fintern the precincts of the private apprement from the Disant-lam, the Disant-Kha is seen in a repaired state, but to be complete should Dwg + Klas gut alteret britthave the whole of the trellised openings made good. The Anknucheult and the Jog's basak close by are als repaired, and complete, more the pointed work in the latter. The Pauch Mahal, Akbar's Khwalighar, and the Turkish queen's house have yet to be taken in harst, but Akhar's dufarkhatta has been tepatred, although still the public bungalow and therefore fused with doors and windows of incongruous design. Miniam's hou e, which is undergoing repair, is also fitted up as a plat-for travellers, and the Hubbl lucies is furnished for district offi-A secreto Exagence for resistors very design in, coals. The use of these three mentioned huildings for dwellings prevents say one realising what they were like in the days of Akhar. The windows and dones render the buildings dark, and spell interior effects and inest decidedly mur the externa un hitecture. Khinningars' cocks and bene and little go to make up the necogenous and aid even partiresque surroundings.

(6) The Paiace of Ahlas's Rapput Queen, the Jodh Bair, a wonderfully improved by remain, which are still in progret. Some of the old majority

Is the reason pairs, which are that is progress. Some of the cell masonry pairs, which were builty in ago to prop broken hearm, night, Is merec, he now removed and the beans attengthened and the upper terraces supported by mon job let into the old stone work. The heiliant blo allocately are much discoloured by weather; the broken edges finald be accured, and the broken pairs much coloured work in the palace, but what there is should be emphasized where fasted. The regalithing of the paraper to particularly required to complete the design, and treats the numerous of the present long horizontal lines of the single-sursest colourneds. The effect of the present resonance of the large entry of think heald be removed. Their roots also damage the musemry of the terrace

The exterior faquile is the pulses towards the east, is, near Miriain's house and the if frankhana or dikk bungalow, has some flanking buildings, which are in themsels of eligita are better and are certainly no part of the polythesia. They probably were built for ensuchs, and their terroval would reveal the façade and be a considerable improve-

ment.

(7.) The cumbrous masonry props used in the stable, south of the B that Palace, might with advantage be remined, and the rece atherwise strength-Stubben ened from above

(8.) The Birbal bouns requires taking in hand, and repair-Bettel Palery. ing, as soon as this freed of its dak bungakes fissings and furnisure.

[Mr. Heath has en mated for repairing the foundations of the huilding at a cost of R 1.500. A sum of R 2,000 has meanwhile twon all sted for protecuting the west. The various summarre, north and north-we of the Burbal Palme, are a pared, in course

al tepau, or under con entition

(9.) The Hathi Pol Citte is done, but the colourade to the east which formed a part of the water-litting arrangement connected with the adjacent Hattle Co Gen. well, wants attention; a pertion of the colonnade is very rulned. and must either be removed or clae taken down, and securely rebuilt.

[I have since recommended an estimate for repairing this amounting to Rs. 3.490.]
(10) The Kashmiri Sarai, which has become rulned and surrounded with debry, is being put in order, and the Hiran Musar mear it is also being renohashman Parki. vaird.

(11) The artial structures of the great mosque and its columnair have been repaired. The painted decoration of the archway, which occupies the The Great Moogaz. centre of the musque itself, has been most speciadally renewed by Mr. Supervisor Learmonth under Mr. Heath, and is in my opinion a creditable piece of work. A good deal more of the painted work in the musque may, with advantage, he paked our retraced and so brought to light.

I have asked Mr. Heath to make an experimental renewal of the messic of tile in the sandstone forders which adors some of the exterior and interior archways of the buildings.

(12.) There are several buildings of interest near the Great Mosque, and further west at the extremity of the Fatelinin-Silver procincies, which morn presentation. They are little known at present. The Haraott-Outly og buildings. ka-Raja Pavilina at the extreme north-west corner of the walled euclouse is a compression of an octagonal court and central pavilion. And mater the mosque is the bouse of Nawab Islam Khan, a much-cuired court and buildings, but ingularly well enriched with good columns in red sambione.

(13.) I hope that all bushings will be photographed before, as well as after, they are reno-

valed or preserved. Photographic records of expairs.

(14.) The systematic out-cooling of weeds from roofs, domes, and terraces should, I sulmus, Systematic on roung at vigen. be arranged for heraven Mr. Heath and the Cellecter. The, best way will be to make a complete chearance ofter each rains.

#### NOTE ON BUILDINGS AT MUTTER AND BINDRAGUN.

(1.) I vivited the Jams Margid in the city of Muttra on the 1st March with Mr. Heath, Executive Engineer, Archaeological Division. It was built a Jame Ale id at Mintres. the rrigh of Aurangach, A.D. 1650-01, and is taked on ... terrare 14 feet above the street; and at the corners are four minareta over 90 less bigh. The whole building was once righly adorned with en annual tiles of the means class, and to those in the mosque of Wazu Khan at Labors. Coloured detail drawings of the pann's of the that remain would be valuable and should be obtained. The relating tile-work should be preserved by edging with comment. The time may come when it can be rescored, but the art of product this particular class of tile-work is dormant in India-

(2) Lesving Muttra we went on to Bindrabon to the Temple of Governd Donahich I had by the Magistrate of Mutta, and latterly by Mr. Heath. The T to of Governd Dee at Bindentun,

towers of the building were overthrown by Aurangelb and base not been renewed, but the exterior walls have been renewated up to where the towers commenced, the effect being a true and unbroken ky-line I am not sure that the restriction of the uppermost parapet is correct, and think that it would have been better to leave the ouper-Eructure, so it appeared when I first sawit, with all the evidences of Auranguila's destructive hund.

Now the building looks as if stopped for east of funds, and, as Mr. Fergusom expressed it to me, "with all the poerry washed out of k." Putting this impression uside, a large amount of good work has been done, and the architectural treatment of the lower part of the built of has been faithfully reproduced. Repairs are in progress to the node liming of the wagonvanited root of the porch, the carved enrichments of which are very delicate and beautiful. As for as I know, there is only one drawing showing the Temple before Aurangaio commenced to overturn it, which may be seen in the walls of a small apartment in the Palace at Amber near Julpur, but the native artist's work is so sketchy and inaccurate that very little on lence is afforded of the outlines of the ribers or towers that crowned the Temple.

There are two inbost flanking the sanctiury which possess curious hexagonal chambers

and are raised wereral her above the main Hag of the Temple

The Gosains or Pajarra of the place with to have an iran gateway placed at the present entrance, in order to secure a propor custody of the Temple and prevent damage. I think the thould be allowed, provided the public have free ailm trance, and the gate is not a more of exterting largeress. The State is to a cortain extent interested in the Temple, upon which have sums have been spent, and the restorations and repairs are in the interests of archaelogy and archnecture.

NOTE ON THE COMDITION OF ARCHITECTURAL MORPHENTS AT ALMARH, BUDAON, AND JAUNTUR, IN THE NORTH-WESTERN PROVINCES

(1.) The Jama Marfid at Aligarh is a building of some importance and was built by Sabit Khan in 1728 A.D. Architecturally it is an adaptation of Jame Mastid at Almarh. Aurangaib's style, having bulbout domes with holly finials and arches with flat cuspings.

(2.) The Multammadans of the city are repairing the edifice, but the whole character of the design is being altered by the native "Ustail" or architect. The surface of the great range of arches is being plastered over, panelled out and descented in a style which completely obliterates the outline and form of the original façade.

(3.) The dames surmounting the sunctionry of the inneque are outlined with tiles in hands of dark blue, yellow and green; the parapet has a toliated crewellation also outlined with tile bands, but how tar the new repairs will preserve or obliterate these features. I do not know the paraper was being repaired in plaster without any tile decoration when Mr. Heath and I imported the building on the and February last, and the domes will not improbably share a similar fate unless better coursels prevail and the old lines of the structure are more faithfully

(4) Although the morque does not stand in the first runk as a national work, I think that Covernment might with great propriety take up the master and secure a more fitting restaution

(5.) The interior has been re-done in chunam and leaks good and fresh, but the painted circles of the ceilings of the domes are convived in the harsh and crude colours which find their way from England into Indian lazars. The message is unbrantially built of large blocks of kunkar, and appears to he senuturally secure.

(6.) Mr. Heath and I visited the months at Budans on the 3rd of February last. This most interesting building was exceed in A.D. 1223 by Shums-Jama Mount at Daters. ud-din Altameli out of the plunder of Hinda semples, and bears a similarity to the mosque at the Kutuh and at Almir. Although far plainer as far as decrantism goes, it has a quantity of curved brick-work which appears to have been partially if not

(7.) The brick renamentation is specially interesting as it is capable of adaptation to modern Indian limitilings in licalities where brick is the only available uniterial, and its study will well repay the architects of our railway stations and civil buildings. The sanctuary of the musque is kept in some kind of repair, but so usual there is a great deal of nonecessary plaster and whitewash, which obscures the old masonry. The quadrangle in front of this is enclosed by arcades which are very much ruined and overgrown. Some of the arches might be repaired, and it is certainly necessary to provide for the accurity of the handsome gateway to the east. All whitewash should be removed from carved tiles or brick as well as from walls, and details should be obtained of all the ornamental work.

(2.) The Muhammadana of Budaro might contribute to the cost of the work, but I think this is a building of imperval interest, and its repair should, if necessary, be sourced by Govern-

(9.) The leight of Bullaco is a structure of some interest, having been hadt in A.D. 1209 by Stame-ad-din Altamsh, and has a quantity of denamental brick-work which is worth illustration, but the plaster covering

should be removed to permit of drawing being made.
(111.) The building known as the familied Chimm Khan is to the south of the fown and highly decorated with brick-work. General Cunning ham thinks Touch of Chinese Name at Husbarn. a perbably use older than the time of the Sikander Lectic and mys: "The dome is unformately very low, otherwise this tomb would be a very fine and strik-

(22.) Details of this building should be obtained as well as ed the tomb to the west of the Magnetrate's Court-

(12.) On the 5th March I visited the Jama Maried at Jounpur, the 1922 to which are being carried on by the Mulumunidan community of the town James Mannt of Jacoput. During my visit, which was hirried, I saw enough to comince me that the work was not being will done. The south gate of the quartrangle has leaf it apper part renewed, the substructure having been left inscerne. The halls flanking the sancmany of the mesque have after repairs been whitenaited and the pointing of the masonry is in

other parts unnecessarily heavy and analyhily. I think that this building should be made over to the Archaeological Division of the North-Western Provinces.

11. On the 17th April, I recommended Mr. Heath's estimate for repairing the cumtyard of the Nagina Masjid amounting to Nagma Masfid, Agra Fort. Rs 3,708 On the same day I recommended a revised estimate for completing the repairs to the Dewan-i-Khas in the Agra Fort. Mr. Heath's Dewspa-Knas, Agra Fort. original estimate was for Rs. 85,424, and provided a morble roof put up in the old Mogul style of long and massive marble Libs. On my suggestion and as in the case of the Khas Mahal, he provided for roofing by iron joists, with thin marble slabs resting on the lower flanges, and thus reduced the estimate to

Rs. 27.761, being a saving of Rs. 57,663. Both of the above estimates have since been sanctioned.

ta. Since August 1881, I have urged the complete repair of the Jahangle Jahangu Palace roof-pays. Palace in the Ayra Fort. One of the roof-pavilions Tions, Ages Fort. is occupied by the Provost Surgeant, and I am glad to say that after some correspondence with the Government of the North-Western Provinces and Outh, and with the Inspector-General of Military Works, it has been decided to build suitable quarters for the Sergeant, and so free the Pavilion, which is a very handsomely carveil red sandstone building

13. The Sarnath Tope near Benares, properly the "Dimmek Stupa," was explored by General Cunningham in 1835, and the Government of the North-Western Provinces and Outh has sanctinned an estimate amounting to Rs. 7,784, in reference to which

I made the following suggestions:-

"I have the honour to return the estimate for the preservat on of the Buddi ht Tope at

Sasnath,

"General Cunningham, when Assistant Engineer at Becares in 1835, made some rough drawings of his escavations. These he has tent me, and the trucing show where the a ructure was examined. A well was sunk in the centre from top in bestom personal age of the ground-line and foundations. A gallery was driven under the boundations from W. S. W. C. E. N. E. A gallery was driven through the Tope above the top of the one insement from N. to S. A tircular gallery was made just above the line basement.

"The corn of the stone masoury is very solid, being of large block of dry subble, bonded

with from tramps and vertical Joggles.

"Mr. Heath's estimate appears to have been arrived at by rather rough calculations, and no object would be gained by introducing any new dramad mone may may. It is simply necessay to get the old work, where bulged or displaced, back into its former place, and to supply breaches with rough masonry which may be of small stones about 18 limbes hing and 6 inches aquare, provided they are last to morear.

"I would respectfully suggest that is would be bester to do the work by daily labour, for some part at least of the repairs, in order that a rare may be arrived at her or plants the whole. In such a way and will careful superintendence I think the work would be done well

and at a moderate cent.

"The galleries made in 1835 might, I culmit, to be filled in, and old broks jound on the spa, particularly in the adjacent demantled tower, may serve the purpose."

14. Colonel Innes, V.C., R.E., Inspector-General of Military Works, has decided, after some correspondence, to remove the Akbas a Palace, Allahahad. whitewash from the highly carved andstone pillars and walls of Akhar's Palace at Allahabad, now in nee as an argenal store.

# Appendix L.

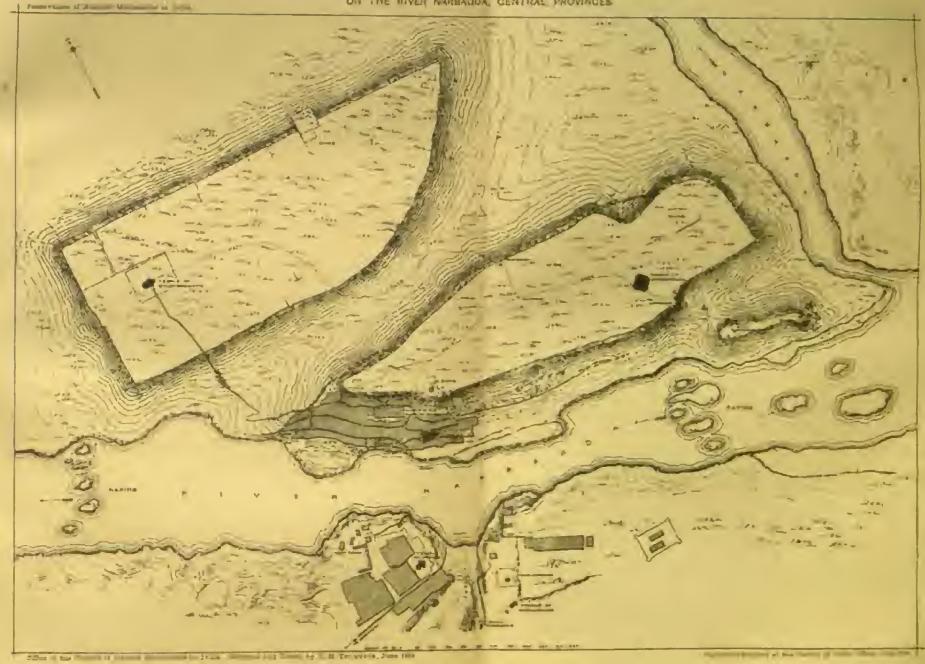

Reports and correspondence, &c., concerning Ancient Monuments in the Central Provinces.

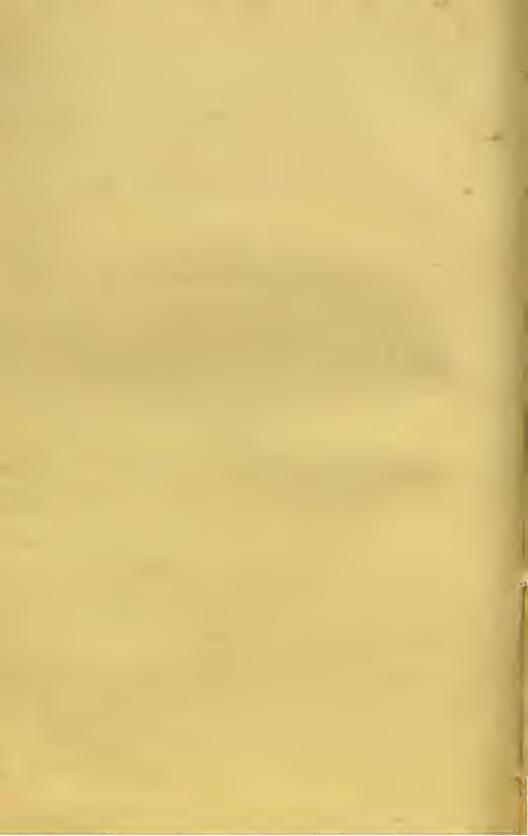

to visit is the celebrated island, between two branches of the River Narbadda, called Mandhatta. It is easily accessible from Mortakka, a station on the banks of the Narbadda on the Raiputana-Malwa Railway between Khandwa and Mhow. There is a fair road-track from the Mortakka station (where exist an inspection hungalow), the distance being 7 miles. The return journey can be performed by boat down the river. Mandhatta was at one time prophesied to supersede Allahabad in sanctity. On the Island, in the shrine of Omkar, and on the south bank in a temple, are to soft the twelve Lingar, which are said to have been in India when Mahmud of Ghazni in AD 1024 carried off to Ghazni the gates from Sommith (another of the twelve Lingam shrines). The following is quoted from Grant's Greetleer of the Central Provinces:—

"The old temp bost Mandhatta have all millired greatly from the bigotry of the "The old temp been Mandhatta have all antirred greatly from the bigory of the full ammadan who rul d the country from about A.D. 1402. Every old dense is overthrown, at I as a defigure of a god or animal as to be found immutilized. The fanate Als-ud-din passed through this country in A.D. 1205 on his return from his Decean raid, and as he took At-math, which is not far of, it a improbable that he would have passed over so rempting an it preserve as Mandhatta. Doubtless the work commenced by him was continued by the Cheri princes of Malwa, and completed by that archaeouxists Aurangseb. Yet much remains a rains which must be highly interesting to the archaeologist. Both the hill are covered with remeatits of habitations built in stone without centern. The walls of the different force trend which a cost the tree. force, two of which e couthe two time of the island little, and two more the rocky entirences on the touthern bank, doplay some excellent specimens of the old sixtle of Hudu architecture. They are formed of very large blocks of some without coment. The more party that time. They are formed of very large blocks of stone without coment. Her stone party the basil of the hill tacif, and partly a course yellow conditions, which must have been brought from a considerable distance. The gateways are formed with last intularation, and unwinnered with must time carring, scatters of gods, Sc. The best are the on the castern end of the id, or distallated proper, which also appears to be the only part that has ever received any repairs. It is now a distinguish these from the old works, using being oven a recent as the Mahammadan period, as at the librimarjund gate (opposite the Bickinda rocks) where there is distinct posted archway laid in mortae. The aldiest Savine temple in the plact is probably that on the Bickinda rocks) where there is distinct posted archway laid in mortae. The aldiest Savine temple in the plact is probably that on the Bickinda rocks, which is a second course of a second course with a front versus lab, through which appears if y was a passage to the rock to have a completely disappeared. It is totally different in plan from any of the continued of the ordering supported on massive plants very the thy carried in rectalment figures. On the Manathatta his nor the remains of what must have been, if it ever approached completion, a remarkably fine Savine temple now it illed Suddbetware. d t ever approached completion, a remarkably fine to the temple now called Suddieswar Mahadas. The dome which covered the thrine is, bowever, rumples by gune, and has been rece dy replaced by a mean flat roof, not so logh as the transming plans of the porches. In rece dy replaced by a mean flat roat, not so high as the temaning plans of the porche. In its all a has all overthemen and covered many of the pillars of the porch, and much of the fire work of the pillars to have been a square alone of ahout 40 fire outside in, such profession and the four wider, each about 5 foot in depths. In each of the war a doorway, and in from of each doorway a peach (Sabbta Manulap) resting on not cen pillars. The plans are 14 finish to the architecture, such porch being thus a perfect cube. They are doborately curved in squares, polygons, and encles, and must of them have a curious frience or filles of Satyr-like figures about full way up. They are about 3's are the loce, and do not caper very much. They are all crowned with bracket cap id, on which rest the architecture, each bracket thing curved into a graceaque square language. The roles of the porches appear to have been of that slabs. It is impossible burness I were. The roots of the porties appear to have been of that white. It is impossible now to say what the unlytum or thrine was like; but it is corresponded with the porches, it

GENERAL PLAN
SHEWING THE POSITION OF THE PRINCIPAL TEMPLES AT MANDITATTA
ON THE RIVER NARRADIOA, GENTRAL PROVINCES

must have been a most imposing structure. The most remarkable funture of the fulldor, however, is the plinth or platform on which it is built; this projects to be a facet beyond the porches, in front of each of which it is broken into a flight of to step. It is raised about to test off the ground, and appears to have been faced all round with a frience of elephants, and almost complete celled on stone stabs. The elephants are between a and 5 test in built, and are executed with singular correctness and excellence of attitude. The uniterial spell andaone and they are monequently now a good deal wather-wiren for some cases there are two on a single stab in an attitude of combat, but more generally a legte one, resting one fact on a small propurate human figure. This frieze does not appear to have been completed, as close by, within an exclusive of which two ideas are still standing, are a number of detached dabs with elephants curved on them, exactly like those on the plinth. All it and in in the temple also, have been sadly multisted,—the trunks, exist and figure of the rider boing generally broken off. The Raja of Mandhatia has also tempored a number to build into his new palace, after getting a mason to chool them down so a imangeable size."

I have had a survey made of the eastern portion of the island, all o a plan.

Survey of island and Subtless section, and details of the Siddheswar Temple deswar Temple.

scribed above. The plans, &c., are being rineographed, and when printed will be submitted to the Chief Commissioner of the Central Provinces, with notes and recommendations for preserving what is left of this remarkable structure.

2. The Mandhatta island is covered with rules and several fine Hindu gateways, all of which are worthy of being preserved, so far no the simplest and least costly remedies will permit; but the Siddheswar Temple is so remarkable that it merits special attention.

3. As my draftsmen were at work on the island, I thought it as well to take Plane, and Omker Temple, the opportunity of securing plans, sections, &c., of Gauri Somusth, Vishon, and the Temple of Ourker, which stands in the town of Mandhatta itself, and which is a handsome example of early Hindu art; and of the Gauri Somnath Temple, which is on the hill to the west of the island. Simple plans were also made of the temples to Vishou and Mambeshwar on the south bank of the river.

4. The Deputy Commissioner of Juhbulpure sent me on the 16th June last Matter Matter and estimate amounting to Rs. 71 for some repairs to Juhbulpure.

the Matter Matter Matter and Links are Jubbulpure. The palace is said to date from Λ.D. 1100. I have stated in reply that I hope to visit Garha this tour season.

Reports und correspondence, &c., concerning Ancient Monuments in Haiderahad, Decean.

1 Since the report of last year was written [see page cexiii of the Annual Report for 1881-821, I have been unable to visit Same constituents roany fresh places in Halderabad, but the vast tracts quin ; atmution. of country under the dominion of the Nizam are known to contain many monuments of great interest and beauty well worth the attention of His Highness.

2 The following correspondence with the Resident at Haiderabad shows what is in progress and what is contemplated or Work at Raiburgah. recommended as far as Kalburgah is concerned,letter No. 818 of the 30th May 1883, from the Resident to the Curator;-

"With endurence to your letter No. 415, dated 12th September 1882, offering certain suggestions relative to the repair and preservation of the ancient buildings at Gullargah, I am directed to lowered for your information a translation in English of a report by the late Sadrahikli it aill be men that the vegetation in and around the dunes has been removed, that the salmon in the Great Mosque which had tallen has been rebuilt, and that steps are being taken to the Mosque and make use of it as a place of wreship. To repair the Mosque and make use of it as a place of worship.

You will observe that amongst other proposals made in the enclosed report, the elitte-

washing and pointing of the doeses has once more been recommended. As, however, this is a barbarous proposal and has been strongly deprecated by you, the Resident intends again addressing His Highiess the Nimm's Government in the matter, but before doing so Mr. Coc-

dery would be glad to receive any faither remarks you may have to offer."

# Purport of the Sade Talublar's Report.

"States, with reservence to Captain Cole's report, that in both the large as well as the small man, (domes) of Khaja Bundelt Nawar, the paintings and enamental sculpture on the walls, which have twen obtained by the chitewash used anomally, should be revived, the walls, should then be whitewashed and the decorations painted either black or any other colour. The Saljudahe (relatives of the saint who are in charge of the shrine) should be written to efficially and directed to interest the medves in the work and detray its cost. The work abould be done

by the municipality."

"Seven of the domes which belong to the Bahmani kings were whitewashed outside and partly made when He High was the N sam visited Gulburgah some time after Captain Coin's partly mande when the tright can to. Want trusted Culturgan some time after Captain Coin's in-portion of them, but the work was not done completely owing to the want of time. A few of these are certainly very elegant in appearance outwide and inside, and they might be repaired and improved in the same names at the large and small roses of Handeli Nawar, so that the

ornamental sculpture in them may appear to advantage. The cost of this work should be home by the municipality, and orders should be issued in the matter through the sillah kan herrie. All the dimner, including the above seven, have been whitewashed, and the regetation around them cleared away, but they should be whitewashed completely inside also; the cast might early be damyal by the municipality.

"The Great Mosque which is in the Fort should also be repaired in the above manuer. There is not another edil - in the whole of India like it in structure; and if it be allowed to foll into ruint, it will be a matter for general regret, and reflect discredit on the Nisam's Govern-

"The read referred to by Captain Cole which lead into the Fort is now being used, and the place is increasing in its popular on. One of the columns in the mosque which had fallen was remained last year, and there is no fear now of the building tumbling down.

"A sum of Re 43,000 was entered in the present year's faulget, when I was the Sadr

Talukdar of the district, but I am not saure if this grant has been sauct med or not.

"I take this opportunity of mentioning that when I we the Sair Talukdar I suggested that the raised pursue of the mosque be set apart for wrethippers, and the remaining portion be used as a school, but after consideration this uggestion was not adopted, as a new wheelroom is under construction, and there is now no department which require to be accommodated in the Fer. The use of this building for any other purpose will be greatly objected to by all the Muhammadaus of the place. It is therefore very desnable that the mosque be completely repaired both insule and misside and used for the purpose for which it was built. If repaired properly, the acreen suggested by Captain Cole (a plan of which has been received) would not be required.

"An estimate of the cost of repairing all the ancient buildings at Kalburgah should be called for from the district, and cancillored by the Government. The work should be commented with, in anticipation of sanction of the budget grant or Rs. 45,000, as the rainy season

is last approaching."

## Letter No. 110 of 1th June 1883 to the Besident, Hardcrabud, from the Curatar of Aucient Mounments

"I have the honour to acknowledge the receipt of your letter No. \$18 of 1883-84, dated the 30th May 1833, enclosing an finglish translation of a report on uncient buildings at Kalburgah. "In teply I can only resterate what I have said in my repeat of the 25th June 1881, and letter No. 413, dated 12th September 1852. All whitewash should be removed from the build-

ings, and more missoury aboutd he left rimm.
"It is, I think, must satisfactory to learn that the proposal to utilise the Great Morque for any oscular purposes is likely to be abandoned; also that repairs to this and other ancient structures at Kalburgah are contemplated.

"I would suggest that hence any definite action is taken, the specifications to be followed for work in the several buildings be sent to me for perusal and observation."

To this the Resident replied on the 12th July 1883 that orders have been issued by the Nizam's Government to lumish the specifications of work at Kafburgah for transmission to me.

# Appendix O.

List of some ancient and modern Forts and Citadels in India.

# THIRD REPORT

# CURATOR OF ANCIENT MONUMENTS IN INDIA.

. . . . . .

FOR THE YEAR 1882-84

#### WORK OF THE CURATOR'S OFFICE.

On my return to head-quarters the 8th April 1883, I Homen to employed the office establishment in fairing out surveys made quaren at Chittore, Mandhatta, Ajmir, Lahore, Gwalior, Sanchi, and in completing the drawings of Madras temples. Up to the and of July I occupied myself with the illustrated report on explorations in Yusufzai.

2. I had intended going on tour during the rains, but the best receipt of a letter from the Government of India, enclosing for my opinion a draft resolution directing Local Governments to themselves provide the means for preserving buildings and monuments of importance, made it necessary to hurry the completion of the second annual report for 1882-83, without which my reply would have been incomplete.

7. It was not until the 22nd September that I was able opinion of the to send in an answer upholding the advantages of a central distinction office, i.e., (1) economy in one referee instead of several; (2) uniformity in remedies throughout the nountry assured, (3) continuity in operations more probable; (4) systematic custody constantly advocated; (5) attention invited to monuments in Native States; (6) the best structures of their class in India repaired; (7) economical expedients suggested and experience reaped in one Province made available for the benefit of other Provinces; (8) Indian architecture dealt with us a whole; (9) illustrations produced of the general subject of Indian architecture.

Past experience shows that, without encouragement from the Government of India, Local Governments will do little

or act spasmodically.

4. Heft Simla on tour the 25th October 1883, reached Tou. Mardan on the 29th, and was engaged for six weeks on explorations in Yusufzai and then proceeded to Lahore to arrange the sculptures found during the two seasons.

I se of the Resident

5. The issue by the Government of India of the Resolution referred to took place on the 26th November 1883, and by its orders the conservation of ancient monuments was handed over to Local Governments, who were informed that my services would not be available in the capacity of Curator after the term of three years, for which the appointment had received the sanction of the Secretary of State. This decided me to confer personally with the Supreme Government.

Proposed Joint

6. I arrived in Calcutta on the 1st of January 1884, reestablishment, mained there during the month, and was told unofficially that the Government of India would be disposed to favour the employment of my services by several Local Governments as their superintending officer. I accordingly made arrangements for visiting and addressing the Local Governments and Administrations of Northern India, including Bengal, the North-Western Provinces and Oudh, the Punjab, and the Agencies of Rajputana and Central India. I submitted no

proposals to Southern and Western India.

Varante N. - W. Printer and C. h. Panish Central Inda. sai Papple I MA

7. I met Colonel Bannerman, the Officiating Agent to the Governor General in Central India, in camp at Mandu near Mhow, and remained with him from the 7th to the 10th of February. I then proceeded to Allahabad, to see Sir Alfred Lyall. On my way up-country I stayed at Agra and returned to head-quarters to start a portion of my establishment on fairing out rough field surveys. Early in March I went to Labore in order to confer with the Lieutenant-Governor of the Punjab, and from thence journeyed to Nimbaliera in Rajputana to keep an appointment with Colonel Bradford, Agent to the Governor General. On my return I stayed at Ajmir, Jaipur, and Delhi, reaching head-quarters on the 16th of March.

A; phontions tr Local

8. The North-Western Provinces and Oudh, the Punjab, Rajputana, and Central India have now asked the Supreme Government for my services to superintend the conservation of their ancient monuments.

9. The allotments from Imperial funds during 1883-84 have been as follows --

Allers seemed, or tame!

		R
Modras, for Bijanagar, Seven Pagodas, Amravati	q	10,000
		19,892
	4	300

to. Besides the above grants, a sum of R5,000 has report the been sanctioned for reproduction of drawings prepared in my of drawings office.

the various buildings illustrated are quoted in the appen-published dices E to R and V to X.

#### MADRAS.

12. On the 23rd July 1883 the Madras Government sanc-Scott tioned an estimate drawn up by Mr. F. C. Black, Assistant Engineer, Archæological Works, Madras, for repairs to the monuments of antiquity at Mahavellipur.

						100
Alaiva or Shore Temple		Þ				453
Krishna Mandapam .						504

Hhima's Ratha						81)
Six caves						371
Watchmen and contingence	S					286
					_	
			Tor	AL	4	822,2
					-	

This estimate provided for carrying out recommendations submitted in the first annual report for 1881-82, pages exiii to exvii. During its preparation in May, June, and July 1883, Mr. Black excavated the Alaiva or Shore Temple and made some interesting discoveries of inscriptions, also of portions of the temple that had become buried in sand.

13. The allotment of the available funds was disposed of Abtenual by an order of the Madras Government, dated the 20th finds. July 1883, as follows: "Major Cole has made an offer of R10,000 on behalf of the Government of India for conservation of monuments generally. This, with the R5,000

promised by the Local Governments, will admit of an expenditure of R15,000 in the current official year, which it is proposed to distribute as follows:—

					R
Mr. Black's salacy, &c					7,000
For Hampi work		•			4.000
Amravati work		4			4.2
" Seven Pagodan	*		•		1,000
٠			To	TAI.	13,000

Mr. Black's tok. 14. On the 31st July 1883, I suggested that Mr. Black should work at the Seven Pagodas during November and December and then proceed to Amravati for actual operations.

This the Government approved.

15. His Excellency the Governor visited Chandragiri in July 1883, and an extract from his Minute dated the 4th Chandragiri. August 1883, was forwarded for my information.

"The Chandragiri Palace, so closely connected with our history in South India, is a fine thing. It should be carefully kept in the state of ruinous but not unsightly repair in which it now is."

#### Вомвач.

Ibeahim Rola Matter 16. On the 29th June 1883, the Executive Engineer. Bijapur, reported that a part of the cornice of the east front of the Ibrahim Roja Masjid had fallen (see page ex. Report for 1881-82, and page xeiii of the Report for 1882-3). In the absence of any sanctioned estimate for repairing the building, I recommended that the loose or shaky cornice corbels be taken down, so that eventually they might be rebuilt in their places.

Great for

17. A sum of R2,000 was allotted out of my Budget for the following repairs at Bijapur .—

			R	
Gagan Mahal Gateway			7557	The actual
Mecca Masjid .			336	exbengume
Mehtari Mahal ,			150	has been
Ibrahim Roja (Tomb)	•	•	759	R1,890.
	Тот	\L	2,000	

The estimates for the first three had been sanctioned in December 1882 (see page xevi, Report, 1882-83), but the latter work was for precautionary props to the stone cornices of the inner verandah of the Tomb. I noticed in my Report

for 1882-83, page xeiv, the unsatisfactory repairs at Bijapur; but I do not see how such repairs can be satisfactory if Architectural considerations are neglected.

18. A sum of R3,000 was allotted for repairs to Synd Grant for Usman's Mosque and Tomb at Ahmedahad, the estimate for Ahmedahad

which, amounting to R12,296, had been sanctioned in 1882.

19 Repairs were sanctioned in November 1883 to the real gateway of the Fort of Pratabgad amounting to R141, and the estimate was referred to me; but as I had not seen the building or a photograph of it, I was unable to judge of the architectural value of the structure.

and buildings at Dabhoi in the Baroda State. They are haroda most beautiful architecture of the Jain style of the toth century, A.D., and the structures should be kept in repair, the carvings, it necessary, being cleaned.

21. My time for inspections being short this year, I was reserved unable to visit the buildings, &c., in the Thana District men-

tinued in para, 5 of page xc, Report for 1882-83.

#### BENGAL.

22. A sum of R5,185 allotted out of my Budget for Mar Shalf's 1883-84 for repairs to Shir Shah's Tomb and the Gaur ruins Tumb and was partially utilised by Mr. Beglar in the following the manner:—

						R
Shir Shah's Tomb						2.479
Gaur and Panduah		4	•	•	*	1,6-07
			То	TAL.		4.286

23. In the early part of the year a Provincial grant of grants at Rto,000 was spent in repairs to the Raja Man Singh's Photograph. Palace buildings at Rhotasgarh, but I have not been able to visit the place.

24. As regards the repairs in 1882-83 to Shir Shah's Tomb, Repairs 1 have already recorded an opinion at page xcviii of my label Show Second Report for 1882-83. Mr. Beglar's tendency is to run heavily into bricks and mortar, which is not only expensive but apt to be injudicious. My position in regard to the Bengal Government did not give me power to prohibit or order any work; I gave my advice only. A recommendation

to remove the square cupola on the dome has, however, been carried out, and Mr. Fergusson takes me to task for the advice.

The evidence is as follows:-

i.—A drawing made by Captain Elliott, R.N., of Shir Shah's Tomb, published as an engraving in 1834, shows the finial to have fallen, only a piece of iron or stone is protruding from the top of the dome at an angle. Captain Elliott must have made the sketch in the time of Lord Minto, i.e., about 1810.

ii.—Therefore the cupola on four pillars shown in my sketch, page xcviii of the Report for 1882-83, is a repair, and as I saw at a glance a modern addition.

iii.—Martin's " Eastern India" has an engraving dated 1838 showing a four-pillared kiosque on the dome, —the inference being that the drawing was made later than Captain Elliott's sketch and after the repair.

iv .- I find at page 148 of Travels in India during 1780-83 by William Hodges, R.A. (published by Edwards, Pall Mall, in 1794), that he describes Shir Slinh's Tomb (the italies are mine): "The plan of this Mausoleum is a square base, rising from the centre of the lake, having at each angle pavilions eronomed with domes and finished with a cullus; from this base was a bridge, that from the ruins now remaining must have consisted of six fointed arches which communicated to the side of the lake, and on two sides are a double flight of steps to the water; on the base is raised an octagon building, having three pointed arches in each face, and on each angle are pavilions finished like the former. Somewhat behind this runs an octagon, ninety-two feet in diameter, and from the extremes spring the dome which is finished on the top by a small pavilion like those already described." These latter exist and are polygonal, the inference being that Hodges saw a polygonal pavilion crowning the dome between 1780 and 1783.

v.—The evidence in other buildings of the Afghan style is, that where there was a lantern or cupola crowning a dome it is on four pillars when the building is square in plan, and on eight pillars or eight-sided when the building is octagonal in plan.

The Tomb of Mubarak Shah at Delhi, A.D. 1433, is octagonal in plan, the dome being finished by a cupola on eight pillars.

The Tomb of Alawaldin at Tijara near Ulwar, A.D. 1517, is octagonal in plan, the done being finished by a cupula

on eight pillars.

The Tomb of Fatch Jang at Ulwar, A.D. 1547, is square in plan, and the dome capped by a kiosque on four pillars.

The Tomb of Makduni Shah Daolat at Monear on the River at Sone (Akbar's time) has a dome raised on an octagonal base and surmounted by a lantern with eight sides.

To remove the square pavilion from Shir Shah's Tombs, which is octagonal in plan, would therefore appear to be correct. It now remains to replace it by a finial of the original design.

25. As regards the work at Gaur and Panduah, I address- Repair at ed the following remarks to the Bengal Government: " Mr. Banksh Beglar, under your instructions, has referred his estimates for maintaining the Gaur and Paniluali buildings to me. They are as follows

as regions :—			K	R	
Adma Masjid			43.804		
Eklakhi Masjid .			2,710		Panduah.
Sona Masjid			21	46,547	
				$\overline{}$	
The Jhanjhania Masjid			3,114		
Durgah			250		
Kadam Rasul Gate			Boo		
Durgah			591		
Minar			1,863		
Gunmant Masjid .			200		
Daras Bari ,			531		Gam.
Bara Sona	• //		4,907		
Lattan Masjid .			4,303		
Chhota Sona Masjiil .			200		
Tantipara Masjid .		4"	350		
Bera Maxid			4,000		
Dakhal Masjid .			4.000	34.000	
				-0	
Contingencies	•	-		3,528	
	-			0	
	10	TAL	•	74,084	

"(2) I have conferred personally with Mr. Beglar on the subject of these estimates, and have the honour to remark that it is not possible for me to submit a detailed opinion on them without examining the buildings. I am, however, satisfied that excavating the enormous amount of earth which fills and surrounds the Adina Masjid at Panduah

is a very proper work to sanction, also that providing temporary accommodation in the Kadam Rasul gateway at Gaur for the officer in charge of the repairs, is unobjectionable. The total estimate for repairing the fine old Adina Masjid at Panduah comes to R43,804—this includes R6,071 for removing the earth and debris from the interior and exterior—and I would recommend the expenditure of R1,200 before the end of the current financial year on this item. The estimate for the accommodation in the Kadam Rusul gateway amounts to R800, and I recommend this to be sanctioned.

"(3) I provided a sum of R2,000 out of this year's Budget for commencing the Gaur work, and the requisite funds

for the works specified are therefore available."

It seems to me that R74,084 is a large sum to spend on these buildings. The first steps should be to clear all the jungle from them, to clear the buildings of débris, to preserve those portions of buildings that can be replaced or are of interest, to repair roofs to prevent the infiltration of rain, to prop up walls that threaten to fall, to clean off dirt, plaster or white-wash from all ornamental or inscribed masonry, and to secure such ornamental parts in their places.

transporter in the first transporter in the fi

26. I addressed the Bengal Government, in January, on the subject of future arrangements for conserving monuments in the Province, and was informed in March that all probable wants can be met by the existing establishment of the Public Works Department. Later, in April, the Government stated that there were no funds available for such purposes.

# CENTRAL INDIA.

Cout of the Sauchi require, to ody. 27. The cost of the operations at Sanchi, detailed at pages c to cili of my Report for 1882-83, is as follows:—

20 2 4 4					R	8.	p.
Material					4,113	10	0
Labour					7,650	12	8
Major Keith's pay	٠	•			2,352	10	8
Temporary Establishment	4				3.078	5	2
Miscellaneous .		0	•	•	205	3	6
		Тот	AL	4	17,400	14	0

separation,

28. After leaving Sauchi in April (see Appendix E), Major Keith went to Mussoorie to write his report which I have never received. He returned to Gwalior on the 20th of

July and drew up estimates for appairs in the fortress to the following .-

Roof of the Sas Bahu Temple Roof of the Teli-ka-Mandir Temple E-tablishment	,	762 1,608 488	U
TOTAL	4	2,918	8

Funds were provided and the work put in hand, Major Keith being engaged up to the end of December 1883 (see Appendix F). During the latter months Major Keith was employed by the Local Administration in collecting Central India exhibits for the Calcutta Exhibition.

20. During my stay at Mandu with Colonel Bannerman, water Officiating Agent to the Governor General in Central India. I addressed the following to him: "I have the honour to suggest that the various protective remedies that may be applied to the old mosques, tombs and palace buildings at Mandu, be carried out under the Political Agent, Bhopawar, His Highness the Maharajah of Dhar has, it is true, opened out a number of approaches to the ruins and constructed a driving road from Nalcha. As you observed yourself during your stay at Mandu the repairs to the buildings are unsatisfactory, and slabs of stone and marble have been taken from same of the most interesting structures. It is, I submit, most desirable that any available funds for repairs be laid out to the best advantage, and that the wanton destruction of the buildings be stopped.

"(2) I have asked the Comptrolles of India Treasuries to place a sum of R1,200 at the disposal of the Political Agent, Bhopawar, for the Mandu buildings, and hope that the Supreme Government will make a further contribution next financial year. It would be better if the Maharajah of Dhar could be induced to contribute a sum of money to be made over to the Political Agent in place of the repairs, on which he was been engaged for the past three or four

(a) Pending any future arrangements which the Governor General in Council may sanction in regard to the conservation of ancient monuments in Native States, I would recommend that the R1,200 allotted this year for Mandu he applied. under the direction of the Political Agent, in clearing the buildings of debris, in removing overgrowth and jungle from walls and roofs, and in making approaches to the various

groups of buildings, some of which are almost inaccessible

from density of jungle.

"(4) The accompanying sketch map shows the more important buildings at Mandu, but others may be discovered. I submitted some general recommendations in a note dated 5th January 1881," a copy of which is annexed, but the following works should, I think, be undertaken before actual structural repairs are begun:—

" Jama Masjid .- Clear the courtyard of debris; remove

the rough masonry partitions in the colonnade.

"Tomb of Hoshang Ghori.-Clear the enclosure of weeds

and debris; clean the blackened marble.

"Chota Jama Masjid.—Clear the colonnade and courtyard of cattle, debris, and vegetation; provide plain wooden doors at the entrances.

"Palace of Bas Bahadur.-Clean out the tank in the

courtyard.

"Daria Khan's Buildings.—Open out a path; clear jungle and debris. The marble Mosaic tombstones in the principal tomb should be cleaned.

"Lall Bangla. - Open out approaches; clear jungle and

debris.

"(5) It is, I think, most necessary to appoint a chowkidar to see that buildings are not mutilated or used for cattle."

Repairs at

30. The operations at Mandu have since been in progress under Lieutenant-Colonel Biddulph, Political Agent, Bhopawar, and the Maharajah of Dhar has generously contributed R2,000 for Mandu and R150 for repairing the Lat Masjid at Dhar (see page clay of the Report for 1881-82). Writing on the 11th March, Colonel Biddulph informed me what he had done at Dhar and Mandu. The cattle had been turned out of the Chota Jama Masjid, and an allotment of R100 made for work. An allotment of R100 was made for the Dhai-ka-Mahal and Dai-ka-chota-bain-ka-Mahal to fit them with doors, outroot pipal, stop cracks, clear debris and jungle. R35 were given for cleaning the sarai near the Chota Jama Masjid, Rtoo for clearing the tank of Baz Bahadur's Palace, R60 for clearing Daria Khan's tomb, R 100 for removing vegetation from the walls of the Hindu colonnade at Hushang Ghori's tomb, and R80 for clearing the jungle at Mapeh Khan's tomb. Colonel Biddulph mentions the ruins of a tower of victory (7 storeys high) erected

by Mahmud,—a building I have not seen, but which must be one of the most interesting antiquities of the place. Speaking of the Jama Masjid, he proposes to make the domes and roof quite water-tight, to remove all vegetation, to mend a hole in the west wall, remove debris from the quadrangle, clean interior mehrabs or chapels, all marble work, &c., and remove the accumulated debris from under the north wall, outside. This, he says, will make what remains of the place safe, but R1,000 is much wanted to close gaps in the north and south walls. My Head draftsman, Mr. Supervisor Thompson, was engaged on the Mandu repairs for two months under the Political Agent, Bhopawar.

# RAJPUTANA.

31. The surveys of the Jain Tower, Tower of Victory, and Sanga Chaori in the Chittore Fortress were faired out during the summer, a set of 12 large plates being zincographed at the Intelligence Branch of the Quarter Master General's Office. On the 9th of October I submitted copies of the surveys to the Agent to the Governor General together with the following notes:—

Report on the Pillar of Victory built by the Rana Khambo of Meywar.

(1) The most celebrated monument of Chittorgarh is the Pillar of Victory, erected by the Rana Khambo in commemoration of the defeat and capture of Mahmud of Malwa

in A.D. 1439.

(2) It is said to have cost go lakhs of rupees, and was built in seven years between A.D. 1442 and 1449. It is throughout of stone, and measures 30 feet wide at the base and 130 feet high or nearly so (the modern dome obscures the actual termination of the original roof). As an architectural object the tower is very varied in outline, whilst its position on the summit of the Chittore Hill gives it all the advantage of great height and command over the surrounding country. The style is Jain and resembles that of the smaller Jain Tower, which is the earliest monument of the Chittore Fortress, but the construction is much more elaborate and peculiar.

(3) In the older example the height is under 80 feet, and the central staircase winds up from base to summit through

a central shaft divided up into six floors.

<sup>1</sup> See Appendix G.

(4) But in the present case we have a height of 130 feet, and the staircase passes up the tower through nine floors. The architect was not content with a single central well. The second, third, fourth, fifth, sixth, and seventh floors have each a square compartment in the middle surrounded by a gallery, through both of which the stairs wind alternately.

- (5) Each storey is lighted by trellis windows, and the angles and recesses, not intersected by steps, are utilised for sculptured statues and ornaments. The exterior surface of the tower is broken up into nine principal divisions, each furnished with its windows, balustrades and eaves or chujjas, and emphasized by columns, pilasters, and numberless horizontal bands or comices. The whole is covered with sculptures, and most of the gods of Hindu mythology are represented wherever a niche or panel occurs.
- (6) A set of six sheets of plans and drawings are submitted with this note. These show, to scale, the general nutline of the various parts of the tower, and the notes in red ink record the present condition of the structure. Plate No. 6 gives in outline the sculptured details of a portion of the exterior walls of the second storey, but the carved figures and ornaments have been omitted from the elevation and section, as their insertion on so small a scale would have obscured to be and confused the drawings.
  - (7) The following are my recommendations for repairs:-

#### Basement.

All vegetation to be completely outrooted.

The surrounding debris of stone to be as far as possible disposed of by rebuilding the broken walling.

The terrace floor surrounding the tower to be repaired. The masonry steps to be set in order and made passable.

# First Floor.

All vegetation to be completely outrooted.

There appears no necessity for renewing the railing along the margin of the surrounding terrace.

The window on the west should be opened out and the masonry removed.

Broken patches of floor to be renewed.

The broken moulding at the south-east comer to be renewed in plain stone

The broken cornice in the east porch to be renewed in plain stone.

The chujja (shown at O O, plate 3) to be renewed.

There is a crack between the south porch and the main building, which can only be completely remedied by rebuilding the porch, but if this cannot be done, galvanized iron ties should be used to strengthen the walls.

#### Second Floor.

All vegetation to be completely outrooted. The chujja at N N to be renewed (see plate 3). The balastrade opposite the south door to be renewed.

#### Third Floor.

All vegetation to be completely outrooted.

The broken masonry screen work in windows to be renewed (see plan 1).

The chujjas at M M (see plate 3) to be renewed.

If the image fallen from the niche to the south cannot be found, a plain stone to be inserted.

#### Fourth Floor.

All vegetation to be completely outrooted.

Balustrades and chujjas at L L and K K to be repaired (see plate 3).

Fifth Floor.

All vegetation to be completely outrooted.

The chujjas and balustrades at J J and H H to be repaired (see plate 3).

# Sixth Floor.

All vegetation to be completely outrooted.

The chujjas and balastrades at G G and F F to be repaired (plate 3).

# Seventh Floor.

All vegetation to be completely outrooted.

Balustrades and chujjas at E E and D D to be repaired (plate 3).

The damaged column on the south projecting purch to be

renewed with plain mouldings.

# Eighth Floor.

All vegetation to be completely outrooted.

The brick musonry filling in to be removed and the trellis windows renewed.

The balastrades and chujjas at C C and B B to be repaired (plate 3).

Wooden steps to the lantern of tower, or ninth floor, to be

renewed.

#### Ninth Floor.

All vegetation to be completely outrooted. Chujja at A A to be renewed (see plate 3).

#### Dome.

The present plaster dome should be removed, to reveal the original masonry roof which resembles that of the old lain Tower. It is incongruous in style and was added by the Maharana Sarup Sing to make good injuries done by lightning. Mr. Fergusson sketched the tower with its original termination in 1839. The old roof should be repaired and rendered water-tight. The removal of the plaster will relieve the strain on the lintels and columns below, and it may be found possible to strengthen the masoury with horizontal iron joists and so do away with the rough cohoma added at the time of the repairs. A lightning-conductor should be placed on the summit of the tower. English copper bands 2" X 2". with clips and nails for fixing against masonry, cost about Ri per foot, and finials cost about RS. The best plan will be to connect the copper bands with the nearest tank so as to be always in contact with the water

# Jain Tower of Sri Allat at Chittore.'

(1) Major-General Cunningham, Director General of the Archæological Survey in India, in 1871, unearthed some Jain statues at Muttra which were ascertained to date from the time of Kanishka, (i.e., A.D. 85 to 120), and these appear to be the earliest traces of Jamism yet discovered. Jain architecture attained great perfection between 1000-1200 A.D. at Mount Abu, at Gimar, and elsewhere, but the singular point about the style is that so little is known of the process of its development.

(2) The tower of Sri Allat supplies a very important intermediate example dating 896 A.D., and is dedicated to Adnath, whose representations are repeated many hundred times outside the building. The height of the structures is 76 feet, but was probably 80 feet to the original apex of the roof. A central starrcase winds up a square shaft through 6 storeys to the lantern on the top. Sculptures and mouldings

cover the exterior from the base to the summit, rendering its appearance most elaborate and picturesque. Many of its architectural forms and details are found to be repeated in Indian temples of a later date. Its preservation is therefore important. Not only is its architecture reflected in the monuments of Chittorgarh itself, but it supplies important evidence of how the Jain style grew anterior to its period of greatest perfection.

(3) A set of the following illustrations accompany these

notes :-

1 Sheet of Plans.

1 Elevation.

1 Section.

(4) My recommendations for repairs are :-

(a) the whole of the vegetation to be completely out-

(b) the debris about the base of the column to be

removed:

(c) the carvings to be cleaned throughout, particularly at the lower part of the tower;

#### Basement.

(d) the masonry at the corners of the plinth to be renewed without any carving (see plan No. 1 on A A);

# First and 2nd Floor.

(e) the displaced columns and masonry in the nichefacing east between B B and C C should be got back into position and tied to the main structure with galvanized iron bars;

#### Third Floor.

(f) the masonry in the niche on the stairs to be repaired (see plan No. 3 on C C);

### Fourth Floor.

(g) the window balastrades to the south and west to be renewed in plain stone, and the steps of the stairs to be renewed (see plan No. 4 on D D);

# Fifth Floor.

(h) the face of the north wall which is cracked and hulging should be tied up with galvanized iron bars (see plan No. 5 on E.E.);

#### Sixth Floor.

(i) the two corners of the wall to the east which are cracked and bulging should be strengthened with galvanized iron ties (see plan No. 6 on F. F.);

#### Lantern.

(j) a column is missing on the north side of the upper lantern and should be replaced in plain stones (see plan on GG). The roof and ceiling require repair by resetting the old masonry and supplying new eaves, and missing courses to complete the apex. There remains but one of the bracket struts that were inserted between each pair of columns. Plain uncarved struts should be renewed. The missing course of masonry at the floor level on the south side to be made good;

(k) all loose masonry or cracks to be strengthened with

dowels, clamps, or galvanized iron ties;

(1) a lightning-conductor should be fitted to the apex of the roof when complete.

# Report on the Sanga Chaori at Chittorgarh, Meywar.

(1) From an inscription in Sanscrit on the right column of the western door this singular edifice appears to have been erected by the Treasurer of the Rana Khambo in A.D. 1448.

(2) The building is square in plan with projections on all four sides and raised on a plinth some 5 feet in height. Entrances are from the north and west, the sides east and south being filled by trellis windows.

(3) In the centre is a raised platform with columns at the four corners, and along its edges are small water-channels

with outlets at the angles.

(4) The centre part of the building is covered by a circular Jain dome built in horizontal layers richly ornamented.

(5) The exterior walls are beautifully sculptured with horizontal bands containing numerous figures and floral

"crolls.

(6) The original roof terminations of the central chamber and porches of the building have disappeared. The present plaster coverings look like repairs and are quite plain. There is a perfect figure of Parisnath over the entrance to the west and a less perfect one above the door to the north. The four memorial niches inside the building bear inscriptions, showing that they were placed in position in the years 1455 and 1456 A.D.

(7) Mr. Fergusson notices a building at Barolli in the Kotah State which appears to be of this class! --

"The front of the temple is a detached porch here called a chaort or "nuprial halt (the same word I believe as choultric in the south), in "which tradition records the marriage of a Huna (Hun) Prince to a "Rajputul bride, for which purpose it is said to have been crected, "but whether this is so or not, it is one of the finest examples of such "detached halls known in the north."

(8) Another example resembling this in plan is the temple of Siddheswar at Mandhatta on the Narbadda, in which, however, there are entrances and porches on all

four sides.

(9) The Sanga chaori was intended to serve a special purpose, and does not represent any very common type; but the architecture is admirable, and the building, although small, is one of the most attractive in Chittore. It is unfortunately much ruined and used as an entrance to the magazine enclosure.

(10) Massive walls of loose stone abut it on the east and

west, thus obscuring part of the beautiful carved exterior.

(11) A set of three zincograph plates accompany this note, illustrating the present condition of the building and the remedies which I suggest for its conservation.

(12) In the first place the wall should be diverted so as to free the structure and permit of a correct appreciation of

its design.

(13) All vegetation and tree growth should be outrooted from walls and roofs. It may be necessary to take down parts of the wall to get at the roots.

(14) Cracks in walls should be strengthened with iron clamps and filled up with mortar to prevent fresh vegetation

taking root.

(15) No new work should be introduced except where required for strength, and then only in plain unsculptured pieces.

(16) The steps to the north and west should be cleared

of debris and made passable.

(17) Displaced portions of masoury should be got back into positions.

(18) The roof and domes should be repaired and rendered

water-tight.

(19) The interior of the building to be cleaned out.

(20) The sculptures of the exterior and interior to be cleaned.

<sup>&</sup>quot; See page 140 in Perguenna's "History of Julian and Eastern Account Contracture."

(21) The floor to be repaired with stone laid in mortar,

(22) The raised floors in the two window bays to be repaired.

(23) The floor of the raised dais in the centre to be re-

paired.

(24) These remedies would not be costly or difficult.

(25) I am indebted to Kaviraja Shamul Dass of Udaipur, who kindly supplied me with transcripts of the inscriptions on the building.

t ear and July ur. 32. A survey party had gone into Rajputana during the cold weather and made detailed plans of the tomb of Fatch Jang at Ulwar, of the curious tombs of the Khanzadas, of the Lodi Emperor at Tijara near Ulwar, and of the famous Palace of the Jaipur Maharajahs at Amber. Very complete plates were prepared, some of which have been reproduced by zinco-graphy.

33. I visited Colonel Bradford's camp at Nimbahera on the 6th and 7th of March, and submitted recommendations for

future conservation of antiquities in Rajputana.

34. Shortly after, I inspected the work of my survey party at Amber, and regretted to see the inevitable whitewashing going on at the old palace in preparation for the visit of His Royal Highness the Duke of Connaught (see page claxiv.

Report for 1881-82).

35. In company with Colonel Steel, R.E., I examined the marble pavilion in the Daolat Bagh, Ajmir, now undergoing repair. Out of the grant of R5,000 allotted from my Budget, R3,332 have been expended to the 31st March (see patagraphs 7 and 11 of Appendix H, page civ, Report for 1882-83; also paragraphs 17-19, Appendix S, page clxx of the Report for 1881-82).

36. Colonel Bayley, the Political Agent at Kotah, has forwarded to the Agent to the Governor General estimates framed by Mr. T. W. Miles, Executive Engineer, Kotah and

Jhallawur-

(i) for repairing the Kameshore Nath Temple at Ramgarh, air ounting to R7.323;

(ii) for repairs to the chattri on the bund of the Ram-

garh Tank, R448;

(iii) for selecting and arranging portions of stone carving from the mins of the Kabara Deora, an ancient temple at Kishen Bilas, Kotali State, Rt,543.

Colonel Bayley reports that the latter is a beautiful specimen of ancient stone carving;

or 10

1 ilord

Anter.

All

Rotah.

- (iv) for repairing the ancient Baradari at Rangpur Kotah, R1,756; and
- (v) for removing rubbish and jungle from the old temple and ruins at Kishen Bilas, Kotah, and for sorting the carvings, Rt, 584.

#### PUNJAB.

37. The grant of R19,892 made by the Supreme Gov-Minde not ernment was distributed as follows by the Local Government:—

		R
(i)	Special repairs to Jahangir's Tomb, on an estimate for R41,614	Gom
(ii)	Experimental relaying of Jahangir's Tomh ter- race, on an estimate for R65,100.	2,000
(iii)	Special repuirs, Shahllmar Gardens, on an esti- mate for R12,546	4,000
(îv)	Removal of Railway buildings at Jahangir's Tomb	392
(v)	Repairs to the mosaics in the Dewan-i-Am, Delhi, on an estimate for R10,815	
(vi)	Repairs to the Kila Kona Mosque at Delhi .	3,500
(vii)	Approaches, Nur Mahal Sarai	870
	Parapet, ditto	214
	Total	19,892

Besides this a Provincial grant of R11,000 was distributed as follows:—

		R
(viii)	Revised estimate for repairs to upper terrace of Jahangir's Tomb, R23.108 (ordered to be	
	closed)	700
(ix)	Nakodar Tomb, on an estimate for R7,324 .	5816
(x)	Petty repairs to historical buildings, on an esti- mate for R11,719	1,000
(xi)	Humayan's Tomb, Delhi, on an estimate to R2,024	
(xii)	Office and petty establishment	
	TOTAL .	11.000

And a grant of R4,000 for annual repairs, distributed as follows:

					R
(xiii) R	epairs to	Shahlima	er Gardens	• •	794
(xiv)	Do. to	buildings	, Lahore Fort		800
(xv)	De. to	do.	in and aroun	d Delhi	1,906
(xvi) B	attle mon	nument at	Ferozpur		300
(xvii) H	Ilran Min	ar, Tank	and Baradari,	Firozpur	200
				TOTAL.	4,000

lubungir's Tomba 38. As regards the repairs at Jahangir's Tomb, the colonnade of the main building has had the tile Dado partially freed of whitewash, and part of the colonnade marble floor relaid. Portions of the marble terrace covering the whole building have been relaid; but the great expense of the latter arrests progress. Part of the coloured decoration in the main corridor le ding to the tomb has been renovated. The various gateways of the tomb enclosures have been freed from the partitions, doors, and windows used for their conversion into dwellings (see Appendix J).

Stations.

39. The work at the Shahlimar Gardens consists of masonry repairs to portions of the central tank and garden walls, repairs to water channels, enclosure walls, and corner kiosques (see Appendix K).

Fort, &z., zi

40. Repairs to buildings at the Fort include those to the Moti Masjid (in use as a treasury), clearing out some upper chambers of the Shish Mahal, repairs to the Shish Mosaic and marble Dado, repairs to the thoor of the Huzuri Bagh pavilion, cleaning interior marble-work and carved door of Ranjit Singh's Tomb, and repairs to the coloured tile-work of the north wall of the Fort (see Appendix L).

Nursuhal.

41. The gateway of the sarai built by Jahangir at Nurmahal had been renovated last year, but the approach road has this year been improved and the parapet wall of the gate repaired (see Appendix N).

Nakoda. Lomba, 42. I have not been able to visit Nakodar since the repairs to the Tombs of Muhammad Mumin and Haji Jamal have been completed, but I was present with Mr. Harrington when the various works were decided on. All temporary or disfiguring additions were to be removed, the main object being to preserve what remains of the beautiful tile decorations and paintings. Experiments have been made to reproduce both forms of ornament; but with what success I am not in a position to judge

43. Lieutenant Abbott, R.E., prepared an estimate for Desca-Khas, renovating the roof and ceiling of the Dewan-i-Khas in the Desta. Delhi Fort, amounting to R7,231; but as he contemplated dismantling the old tool and ceiling and substituting entirely new work, I felt obliged to recommend that the old ceiling should be left intact. I consider that repairs should leave all the old work intact; any other proceeding is vandalistic.

44. An estimate for restoring the singular black marble Desarration mosaic at the back of the Dewan-i-Am in the Delhi Fort was drawn up by Licutenant Abbott, amounting to R10,815. This received the sauction of the Punjab Government in September, and work to the extent of R2,916 has been done (see Appendix P). I visited Delhi in March last, and

was quite satisfied with those repairs.

45. An estimate for special repairs to the Kila Kona Kark ... Mosque in Purana Kila, Delhi, amounting to R4,864, was Monque sanctioned in November 1883. The whitewash of the interior has been removed, but it should have been done without scraping the marble and stone. The mosaic work has been well repaired. The security of the structure requires attending to and insuring.

46. Repairs to buildings in and around Delhi are as Regains to follows1:-

and enned

(a) Red sandstone flooring to the pavilion known as "Bhadon," in the Delhi Fort.

(b) Tomb of Imam Zamin at the Kutub. Renewal of caves and chujjas, red sandstone flooring, and partial removal of whitewash.

(c) Gateway of Ala-ud-din at the Kutub. Renewal of broken points of the cusped archways, repairs to red sandstone walls, repairs to the floor in concrete.

(d) Saldar Jang's Tomb. Petty mason's work and clean-

(e) Tomb and mosque known as Jamali Kamali at the Kutub. Red and white stone flooring, cleaning, and petty mason's work.

(1) Kutub-ul-Islam Mosque. Partial cleaning of the columns.

(g) Wire fence to enclose the group of buildings at the Kutub (see Appendix O).

(h) Repairs to the floor and screens in the small tomb in the grounds of Humayun's Tomb, and wire fencing round the tomb known as that of the Barber.

(i) Provision of watchmen to the Delhi Mutiny Monument on the ridge.

La flancia,

47. The Canal Department at Delhi has for some time been desirous of converting some tombs of modern Mogul architecture, known as the Lall Bangla, into canal resthouses. I represented that they might be repaired and utilised if a guarantee could be obtained not to disfigure or alter the buildings, which are interesting specimens of the 18th century. Sanction to their transfer to the Irrigation Engineers has been withheld by the Punjab Government.

V a trai

48. The excavations conducted by me this year in Yusulzai have resulted in the discovery of a large number of sculptures from various sites on the frontiers of Swat and Buneyr. I was engaged in the district from the 29th October to the 12th December. Government determined that the work must be done in communication with the Director General of the Archaeological Survey, and I therefore reserve a detailed report for the volume which he and I have in preparation on the "Budilhist Sculptures of Gandhara." After leaving Mardan in December, I spent ten days at Lahore in arranging the sculptures discovered under my direction in the same district during the cold season of 1882-83 (see pages exiv-exxxviii, Report, 1882-83), and these, together with the finds of this year, are now collected together in the building known as the Chauburji.2 There are altogether 227 boxes in which the carvings can be exhibited until more finished cases are made. The subjects are, as far as possible, grouped according to their class, figures, panels, friezes, &c., the broken pieces being pieced together so as to appear intelligible. I welve sites were examined during the two seasons, the sculptures from each being kept together; of these Lahore retains 5, and the remainder are presented to the following museums by the Punjab Government:-

Imperial Museum, Calcutta . 2 groups.
Victoria and Albert Museum, Bombay 2
Central Museum, Madras . 2
Museum at Rangeon . 4

They have all been photographed; some of them, reproduced by heliogravine, are published (see Appendix 1). I

See Apprada T.

also had some of the most remarkable sculptures in the Lahore Museum photographed by my Assistant, Mr. Supervisor Fluke. A selection of these, together with the photographs General Cunningham has of the results of his earlier explorations, will be utilised in the volume alluded to.

# NORTH-WESTERN PROVINCES AND OUDIL.

and Oudh referred to me in July 1883, on the subject of Imperial assistance for the construction of a visitors' bringalow at Fatchpur Sikri, estimated to cost R23,117. In reply I was directed by the Government of India to state that funds for such a purpose were not available. It is, however, most desirable that suitable accommodation be found, as three of the palace buildings continue to be used by visitors.

Inspector-General of Military Works on the subject of the Mahal Pavilion in the Foot.

Agra Fort, in view to its repair, and said he would be glad if the construction of other quarters for the Provost Sergeant could be expedited (see page cxli, Report for 1882-83).

North-Western Provinces and Outh, sent me an estimate mounts of repairing two raised sandstone causeways, which intersect the garden of Akbar's Tomb, at a cost of R6,817, and in forwarding the papers to the Local Government I remarked that the original geometric laying out of the garden had to a great extent disappeared, and what had been done of late years was merely to redeem the grounds from wild jungle; that if the two causeways were to be restored the others in the garden should be also put in repair, but if not, it seemed to me sufficient to simply bank up and turf the causeways to the north, west and east, but to repair the one to the south which serves as an approach for visitors.

52. The damage done by visitors to the mosaics in cash, the Agra Fort Palices led me to recommend the provision the Agra I are of iron gates at the various points of ingress (see page exhi of the Report for 1882-83), and Mr. Heath's estimate amounting to R452 was sanctioned in November.

53. The suggestions in regard to the Samath Tope same tage made at page extra of the Report for 1882-83 led to a revision of the original estimate (R7.784) and its reduction to R5,039, which amount was sanctioned.

54. At page exli of the Report for 1882-83 I recorded a Control Store Store recommendation to repair the façade of the Ummer Singh Force

Gate in the Agra Fort. Mr. Heath's estimate for renovating the inlaid work and protecting the surface of coloured tiles with silica, amounting to R667, was recommended.

Khao Mahal and Samun Hari, Agra Fati 55. In September I advised the Local Government to sanction Mr. Heath's estimate, amounting to R3,010, for repairs to the enclosure walls of the Khas Mahal and Saman Buri in the Agra Fort.

Climi-ka-Roja, Agra.

56. In October Mr. Heath sent me an estimate for repairs to the Chini-ka-Roja (a tile-covered tomb on the north-east bank of the Jamna near the Rambagh), amounting to R1,257; and in recommending its sanction, I pointed out that the tilework which had become black from damp should be cleaned, also that the interior fresco paintings should be revived, and a copy of the band of inscription encircling the interior should be sent to General Cunningham.

Downsi-Khas terrace, Agra Fort 57. In December 1883 I recommended an estimate amounting to R1,870 for repairing the terrace and marble railing in front of the Diwan-i-Khas in the Agra Fort.

Protestion team lightning.

58. Estimates for providing the following buildings with lightning-conductors have been recommended:—

i.-Moti Masjid, Agra Fort. ii.-Akbar's Tomb, Sikandra.

iii.-Great Mosque, Fatehpur Sikri.

Mint buildings, Fateligue Sikri 59. Last year, I submitted various recommendations for buildings at Fatchpur Sikri (see page exlii, Report, 1382-83); and Mr. Heath has prepared an estimate amounting to Rt,087 for clearing the old mint buildings of debris and for propping some of the domed chambers. I pointed out to the Local Government that this sum seemed a good deal to spend on so plain a building, and that others of greater importance should be dealt with first—such as the so-called Haraoti-ka-Roja Pavilion and the house of Nawab Islam Khan.

Painted decurations at Situadea. 60. In a note on Akbar's Tomb at Sikandra (see page exli, Report, 1882-83) allusion is made to the painted walls of the vestibule in front of the passage leading down to the actual tomb of Akbar. Ishmail Khan of Delhi has been employed to revive a portion, and the work is certainly very effective and handsome. I think the whole should be gradually restored, as the ornamentation is both rich and vaned.

Henoral of whitewest trum all halldings. 61. So much has been done to the Agra buildings that any shortcomings stand out in great contrast. The appearance of whitewash is particularly offensive. It occurs in Jahangir's Palace in the Agra Fort, where the removal is only

partial and done by scraping. It also appears in parts of Akbar's Tomh and the entrance gate, and in many other buildings. I think that a gang of workmen should be continually employed in removing whitewash from bond fide masonry or painted walls, and be trained to do so without injury to the surfaces beneath. The only way is to soften the lime with soap or acid and water, and to remove it carefully with modelling tools and brushes, using a syringe or garden pump to clean the surface. The cost is not great, but the effect is, and the process sometimes results in discoveries.

62. As Mr. Heath has unusual facilities at Agra and other temptions places where work is in progress, I beg to suggest that he be instructed to copy all inscriptions on buildings and to send them to the Director General of the Archwological Survey.

63. I visited Agra on the 18th-19th February. The Chini- Visite Agraka-Roja should be more accessible to visitors and have a good road up to it. The fresco paintings in the huildings overlooking the river at lunad-ud-Dowlah's tamb (see Appendix R) have been freed of whitewash, but damage done by scraping. The paintings in the lower part of the tomb building are very handsome and should be cleaned and revived. The Somnath Gates in the Agra Fort have been cleaned. Mr. Heath states them to be of sandalwood. I think they ought to be in a glazed case in a position where they can be inspected both back and front. This is not possible where they now are. Some marble columns, brackets, and lintels of mosaic similar to that in the Saman Buri were discovered in digging foundations near the Ummer Singh Gate in the Agra Fort. I think they should be set up. The receiling of the Diwan-i-Khas with marble is complete and satisfactory. Repairs to the Saman Burj and Khas mahal are still in progress. I visited the Fatchpur-ki-Masjid near the Taj with Mr. Heath, and suggested how for a small sum he could secure the building from ruin, by water-tighting the roof and domes, and by filling in gaps in the masonry walls (see para. 5, page cexii, Report, 1881-82).

of When at Allahabad in February, I took the opporture Neckshood nity of seeing the Commissary of Ordnance, Major Lamb, R.A., to ascertain whether it is necessary to periodically white and colour-wash the interior of Akbar's Palace, and he said he would make no difficulties if the Executive Engineer was directed to clean the red sandstone columns. Indeed, some of them are coloured red, and cleaning them could have no effect on the light of the interior.

#### CENTRAL PROVINCES.

Manthatta

65. In October 1883 I submitted my survey of the Island of Mandhatta to the Chief Commissioner of the Central Provinces.

A survey of the easiern portion of the island, and plan, section, and details of the Siddheswar Temple, were accompanied by the following recommendations:—

"The plan of the structure is unique, being a central sanctuary surrounded on all four sides by perches. The walls of the unin part of the building, which is a square of 37 feet, are very massive and probably supported a lofty sikra, or tower, such as most temples possess. Each perch was composed of fourteen columns, but there is no evidence as to whether anything existed above the present flat roof. The great feature of the building is its plinth, with the bas-relief of large sculptured elephants. The whole is extremely ruined, and Mr. Grant conjectures that the temple was overthrown by Ala-ud-din,

who possed through the country in A.D. 1295

"The plan shows what parts of the structure are standing, but until the debris is cleared away, no correct perception can be had of what is best for the preservation of the remains. The temple was domed in by Rao Danial Singh some 45 years ago, and a Lingam now exists in it, but whether the dedication was originally to Siva can be best ascertained by a careful examination of all the fragments which are scattered around. An inscription or some sculptures may come to light, but as the architecture is Jain in style and an elephant is the symbol of the second Jain bierarch 'Ajitanatha,' it may possibly be discovered that the dedication was originally Jain and not Hindu at all.

"I strongly recommend that the building be cleared of all debris, that all portions of columns or carvings be earefully collected, and that they, together with the elephant plinth, be as far as possible got back into position. Restoration in a case of this sort is out of the question, but what exists should be preserved and occurred in situ.

"If the preliminary clearing of the site of jungle and ruined masses, and collection of all carved fragments can be arranged for, some better or more suitable remedies may become evident. Notes on the plan of the temple indicate generally the condition of the structure, and where many of its component parts may be found."

I suggested in a letter that an engineer should be sent to carry out the preliminary measures, and offered to contribute towards the cost, but have not heard of anything having been done.

# BURMAH, HAIDERABAD, ASSAM, AND MAISUR.

Descriveres in Assa 66. In regard to Burmah, Haiderabad, and Maisur, I have nothing new to report. Some remains recently discovered in Assam have been added to the list of buildings in Appendix A.

#### THE PRACTICAL USE OF INDIAN ARCHÆOLOGY.

67. I would venure to describe archæology as the discovery, elucidation, and preservation of historical records and monumental remains. The study of history is part of the national education, and to elucidate history is one of the uses of archæology. But archæology has other uses bearing on the architecture and art of a nation.

68. Each part of India has its own styles exhibited in the temples and dwellings of the past, and it is only right that these styles should reflect themselves in the native architec-

ture of the present day.

That such is not the case is greatly due to our own preoccupation in the government of a new country, also to neglect

and destruction in the days of conquest and mutiny.

69. Natives of India, for centuries the most conservative of people, are now aspiring to adopt English customs, whilst neglecting many of their own. I remember Amravati Seshya Sastri, C.S.I., telling me at Kombaconum in February 1881 that a temple architect in Madras is scarcely to be found, The people replaster and repaint their own fanes, but when it comes to building a new one, those who in old days would have produced a suitable plan are either in the service of our Government as engineering draftsmen or busy misrepresenting Gothic or Renaissance. A rich Seth of Muttra wanted some years ago to build a temple, and although Muttra was in ancient times the centre of Hindu architecture he had to send to Madras for a plan, the result being an inferior interpretation of Dravidian art. The Maharaja of Punna has built himself in Bandelkhand a temple like St. Pancras Church in London, and Scindiah and Holkar have a hankering for Indo-Italian Palaces.

70. Government provides for the education of natives in languages intimately connected with their various faiths, but it holds itself neutral in matters of religion. Its province is clearly not to encourage temple or mosque building, but when they are to be built it decides to provide for public health and sufety before the design can be carried out. Why should not public taste be considered as well? Natives are often indifferent to sanitation or stability in their dwellings, but the poorest

peasant likes a coloured pattern in his mud shanty.

71. As regards secular architecture, there is much in Bombay, Madras, and Calcutta to gratify the architectural tastes of Europeans, but no extensive encouragement has been given to native architecture.

72. Something should be done, as the styles of public buildings at the presidency and other large towns have thrown the native mind into a state of chaos, and produced a mixed architecture over India, which every cultivated taste must regret.

73. The remedy is to let natives learn better. But they cannot be wandering up and down India to study the best buildings, and if they could, only one in a thousand would be able to draw them. To learn a language a grammar is required; to study architecture, a grammar of construction and ornament.

74. Without entering into the question of methods of teaching or classes to be taught, I submit that an accurate representation of Indian architecture is wanted for architectural

students.

75. Similarly, as regards industrial art, a grammar of ornament should be compiled applicable to decoration of all

kinds and intelligible in respect of scale and colour.

76. When invited in 1867 to offer suggestions for collecting information about the ancient architecture of India, I advocated its representation by photographs, drawings, plans, easts and written descriptions, pointing out how such means of educating natives might benefit their modern art.

77. In a note published in May 1879 (see Appendix G., First Annual Report, 1881-82) on the Industrial Arts in India, I endeavoured to direct attention to the use of ample illustrative material, such as architectural flat and carved ornament and

examples of industrial art.

78. I have been permitted to publish some experimental architectural plates which are described in the appendices of this report and give an idea of the class of illustration that I

think would be of practical use.1

70. These are but a portion of what is necessary to adequately represent Indian architecture and art. It would be necessary to complete the work, as I commenced it, under the Supreme Government; otherwise there would be sacrifices to uniformity, unnecessary repetition, as well as additional cost.

#### H. H. COLE, Major, R.E..

#### Curator of Ancient Monuments in India.

At the request of Government I have given a proposed distribution list in Appendix V. Transpetor sets have been enterribed for out of the 100 published, and more estimate are expected. I think that negle copies of the Plates should be available to give or sell to arthur of this country. The average cost for a new addition to—

## Appendix E.

Great Buddhist Tope at Sanchi, Bhopal State, Central India.

(N.B.-The Illustratums are from photographs, printed by Heliogravuse.)

1. The Great Tope at Sanchi, no well known in the scientific world, through the writings of General Cunningham and Mr. J. Fergusson, was first discovered by Captain Fell in 1819 and excavated in a most destructive manner in 1822 by amateur archeologiats. (Mr. H. Maddock, afterwards Sir Herbert Maddock,

was at the time Resident at Bhonal.)

2. Captain J. D. Cunningham, when Political Agent at Bhopal, noticed these antiquities in a paper communicated to the Bengal Asiatic Society in 1847. Major II. Durand (afterwards Sir II. Durand) made drawings of various portions of the Sanchi Gates in 1850-53. But the more detailed discoveries of General Cunningham and Lieutenant (now General) Maisey in 1851 (when they also opened the topes around Bhilsa) are described in the "Bhilsa Topes," published by General Cunningham in 1854.

3. No relics were found in the Great Tope in 1851; the southern and western gates were fallen, the pieces lay scattered on the ground, and a recommendation is recorded in the above-mentioned work for their removal to the British Museum, "where they would form the most striking objects in a Hall of Indian Antiquities." Nothing was, however, done on account of the great difficulty and expense of transporting such large masses of stone over a rough and hilly

country to the seaboard.

4. In May 1868 Major Willnughby Osborne, Political Agent in Bhopal, informed the Government of India that the Begum of Bhupal had been requested to present one of the Sanchi gates to the Emperor of the French, to be erected in Paris, but that she desired to know whether the British Government would accept the gate in question for the British Museum. The Government of India in the Foreign Department then wrote to the authorities in Central India, asking that no removal of any portion of the Sauchi remalus might be permitted, and stating that casts of the more interesting portions would be procured and copies presented to the French Government.

5. I was accordingly deputed in 1868 to undertake the casting operations, and in 1869 made a full-size model of the eastern gateway of the Great Tope, as well a portions of the sculptures of the three other gateways. Copies of these casts may be seen in Paris and in London and Edinburgh. Casts of some

of the sculptured panels are in the Imperial Museum, Calcutta.

6. Early in 1880 Major Prideaux, Political Agent, Bhopal, submitted a recommendation through Sir Henry Daly, then Agent to the Governor General in Central India, to clear the vegetation at Sanchi and to re-erect the fullen gateways. Mr. Bernard, Secretary to the Government of India in the Home Department, invited my opinion as to the feasibility of the proposal, to which I replied by strongly supporting it and by forwarding drawlegs, showing how the gates should be restured.

7. I vi ited Sanchi on the 27th November 1880, and reported on the state of the tope (see page clxi, Report of the Curator of Ancient Monuments in India for 1831-22). A detailed survey was also made, showing the exact condition of

The Bhusa Toyes, by Breest Major Craningham, Lundon, Smith, filler & Co, 1852 Tree and Serpent Weeship, by J. Fergusson, London, India Office. 1868, and adition, 1873.
Picturespee Illustrations of Ancient Architecture in Hindustan, by J. Pergusson, London, Hagarile 1547

the remains and what was required to be done. (See plan, page ci of the report for 1882-83.)

#### PLATE No. 1.—Great Tope at Sanchi. Filling in of the Breach 1881.

8. In March 1881, Mr. Mears, Superintendent of Public Works at Schore, was deputed by the Political Agent of Bhopal to Sanchi. The Supreme Goverument furnished a sum of R2,000 for preliminary operations, and jungle was removed from the several rulus on the Sauchi Hill, the carved stone fragments were collected, the great breach made in 1822 repaired, creepers removed from the face of the mound, and the shaft that had been sunk in the tope tilled in. A series of photographs, showing these operations, was taken, one of which is reproduced in the Plate.

o. After personally inspecting the Sanchi buildings in 1882 and seeing the results of Mr. Mears' work, I addressed the following instructions to Major

Keith, who had been appointed my Assistant for Central India:-

"Your attention is threated to the following points in respect of the work at Sanchi.

"The first works to be attended to are the re-erection of the talken gater, i.s., the western and southern gate of the Great Tope, and repairs to the smaller gareway these by. Arrangements for these should take precedence of all n her works. doing anything to the surface of the great hemispherical dome of the tope; the reinvated portion slaws signs of settling down, and during the, pointing the massive joint would be useless. Moreover, the dome was originally plantered over, as may be seen in certain parts, and, after the railing has been replaced on the summit, it will be tune to consider what is best to be done with the donie surface.

"The upper ralling and toe of the tope should, as far as possible, he re-erected. An approach path should be unde up the side of the bill, and steps cut in the teck were no exact. The causeway to the small tope in the west alould also be improved by cutting steps. &c.

"A giod deil remains to be if me in jungle-karing, and all the buildings and remains on the hill should be completely treed from creepers and trees. The tree near the northern gate should be felled. • • • • Mischievous chipping of carvings call goes on and can only he prevented by erreining a wall around the area covered by buildings. small tope to the west should also be so protocted, and gates under lock and key be provided at each place, so that the straying of cattle and trespass by lillers and mise evers persons may be prevented. . . . . I think a good deal may be done to the rating round the Great Topo by straightening the piers and holding erect by iron bars let into the plinth of the tope. A recent earthquake has caused a serious crack right across the bottom of the right pier of the northern gateway.

"Fortunately the crack is nearly in a horizontal plane, but it would, I think, he well to the the top of the two piers by iron bars to the tops listly, and thus lessen the danger of falling

forwards, should Size in he again visited by an earthquiste,

"The space between the railing and the tope is paved with large radiating slabs of score, which should be laid there and the covering earth all removed. The Buddhist figures should. as Le na pear ble, be replaced in their positions opposite the gateways. The steps recently built to the up of the plinth have a number of carved stones, which belong to the upper sulling, perhaps, and which should be removed. Fergusson's and Conneighan's libertations show a double flight of essies at the south gate, and these stars should be restored. The small tope to

the we might be repaired by fill go the hole and repairing the dome.

"The sculptures of the garrways of the Great Tope and of the small garrway near, also of the railing of the small type to the west, should be thoroughly cleaned. All curved fragments, the original position of which cannot be identified, the off be carriedly contained by the work of re-erecting the garrways is of paramium importance.

10. Again visiting Sanchi on the 12th-14th March, I was most satisfied with what had been done. The progress made, under no common difficulties seemed to me most creditable to Major Keith and Mr. Lewis, the engineer placed at my disposal by Colonel Thor ason. A complete transformation had taken place. The whole of the jungle had been removed from the Great Tope, the ground round it had been partially cleared and sloped, so as to prevent waterlodging, the processional path between the railing and plintle of the mound had been partly freed of debris and earth, the stone pavement laid hare, and,

several fragments of sculpture recovered during the process of clearing. The figures of Buddha were in process of re-erection in their respective places against the plinth of the tope opposite each of the four gateways. The great Asoka miling, which had fallen to rain between the north and west gates, between the west and south gates, and at the east entrance, had been straightaned and secured. The northern gate, rendered dangerous by the crack across the right pillur, had been secured. The eastern gateway had also been secured; the southern and western gates were in process of erection. The smaller gate had been re-built. Many of the sculptures had been cleaned, greatly to the advantage of the scenes, which were scarcely Intelligible for lichen and coatings of plaster. Owing to the eradication of jungle the outline and position of the various buildings on the Sanchi Hill are now evident. The approach road on the north side of the hill had been opened out and restored, and the auci at canseway, leading from the small tope on the west, improved and stepped The retaining wall to the east of the Great Tope has been partially re-built, and the temples, Chaitya Hall and Vihara, cleared of debris. Two large statues of porters, or Gwapals, found in clearing the ground had been erected to the north of the Great Tope.

PLATES Nos. 2-5.—General Views of the Great Tope at Sanchi, showing Repairs, 1883.

PLATE No. 6.-Southern Gateway, Rebuilt, 1883. Front View. PLATE No. 7.-Ditto Back View. PLATE No. 8.-Western Gateway, Rebuilt, 1883. Front View. PLATE No. Q.-Ditto Back View. PLATE No. 10.—Small Gateway, Repaired, 1883. Front View. PLATE No. 11.-Back View.

11. Before Major Keith and Mr. Lewis lest Sanchi, in April 1883, the fallen gates had been completely re-erected. The illustrations show what has been effected for the grant made by the Supreme Government.

13. The heavy part of the work is done, but the following remains to be

finished :-

### Great Tope.

1. Complete the sloping off of the ground all round. 2. Completely enadicate all roots of trees or croopers.

3. Rebuild the plinth which bulges dangerously near the south gate. 4. Secure the surface masonry of the tope by filling in the joints and pointing.

5. Rebuild the ralling on the summit of the mound.

6. Complete the cleaning of all sculptures.

## Small Tope to the West.

7. Fill in the breach

8. Secure auriace masonry of the mound. o. Clear the ground of rubbish and trees.

10. Secure the railings.

it. Clean up the processional path,

12. Clean all carrings.

13. Wail round the small Tope.

#### General.

14. Build a wall round the area covered by the Great Tope, Vibara, and Chaitya (clear of all the accient foundations of huildings, and un the shapes of the hill, so that the view of the Tope may not be obstructed.)

15. Complete small repairs to buildings to secure them against rain

16. Put up stone slabs with inscriptions giving name and date of each structure and when repaired.

These operations are now in progress by Mr. A. Meirs, whom Colonel

Kincaid, Political Agent of Bhopal, ha deputed to Sanchi

13. The Sanchi Stupas, or Topes, and their sculptures, have been allustrated and described more than any other miniment of Indian antiquity. An elaborate notice of them would be out of place here, and I merely repeat what General Cunningham and Mr. Fergusson have written. The following brief summary will, however, show the value of this unique historical building

14. General Countingham assumes the dates to be as follows:-

Tope, B.C. 500-300. Railing, B.C. 250.

Gates, about the Christian Era-

15. The tope is elliptical in plan, measuring at the base 118 feet by 125 feet. Its present height above ground is about 55 feet, the railing is also elliptical in plan, measuring 137 by 150 feet. There are four gates, at the north, south, east, and west, giving entrance to the processional path between the tope and railing. The tope is faced with stone, the railing composed of uprights and cross-bars of stone, inscribed with the names of donors. The four gates of totals are alike in construction, consisting of two pillars, about 10 feet from centre to centre and 2 feet square in section, for a height of nearly 15 feet from the ground. The aperstructure consists of capitals about 6 feet high, supporting three cross lintels, measuring about 22 feet from end to end. The total height of each gate without the upper row of statues and symbols measures about 33 feet.

to. The architectural embellishments of these curious gates are of three

kinds-

I.—Detached statuettes and saulptured symbols.

II .- Sculptured capitals, caps, and bars.

111.—Bas-reliefs of historical and religious meaning.

17. A large number of the detached sculptures have disappeared, but it is milent from those that remain, as well as from the slots which held those missing, that all the openings between the cross lintels were filled. Each upper rail was crowned by a central symbol of the wheel, flanked by statuettes of purters holding changes, trisal emblenes and winged lions or clophants. Men on horseback and riding claphants, dancing women, tigers and lions, filled the pares between the upright bars of the cross lintels. The capitals of each of the pillars were flanked by brackets, representing dancing women under trees.

18. The sculptures of the expitals are :-

Northern and eastern gates.-Elephants and riders.

Southern gate.—Lions. We tern gate.—Dwarfs.

The block caps of each gate represent crouched animals and riders placed back to back (like the capitals at Persepolis), elephants, horses, winged flors, there is a non-constant of the capitals at Persepolis and home of griffing with wings.

The upright bars of the cross rails are variously carved with conventional Howers and emblems.

19. The has-reliefs covering the pillars and eros lintels represent scenes described at length by General Countingham and Mr. Fergusson.

The subjects are generally as follow:-

I .- The dream and conception of Maya, the mother of Buddha,

II .- Prince Siddartha's trial of the how,

III .- Prince Siddartha', life, Palace scenes, love scenes, social life.

IV .- Prince Siddartha witnessing the four predictive signs.

V .- Prince Siddartha's demriture from Kapila.

VI .- Buddha's visit to Unuvilwa Kasyana. VII.—Boat scene and Buddha's Nirvana. VIII.-Worship of topes, trees, symbols, IX.-Worship of trees, by animals,

X.-Siege of a city and relic capture. XI -Relie processions.

XII.—Triumphal processions.

XIII - Besides these historical records there are panels of flowers, unimuls, and garlands, treated in a conventional manner, showing Grick and Persian origin.

20 As regards dress, it is noticeable that the women are represented naked ; a simple girdle of beads or jewels round the loins is in many cases the only covering. The hair is platted down the back in a most elaborate fashion. They wear jewellery, such as earrings necklets, and bangles for both arms and ankles. The men are generally draped below the waist and sumetimes about the shoulders with the right arm left bare. Their turbans are elaborately ned and sometimes jewelled.

21. In one sculpture, representing the worship of a tope, the men are evidently strangers, apparently from the north, and are clad like the inhabitants

of the Himalavas.

22. The arms represented include spears, bows, swords, battle-axes, and shields. Chariots are shown drawn by four horses abreast, and by one or more pairs. Elephants are turnished with handsome trappings, howdahs, and belis, as they are at the present day. Horses are dejucted with head-plumes, and harnessed much as now, both for riding and driving. We see women drawing water, husking and winnowing corn, making chappartles in the primitive method still practised in India Ascettes are shown hewing wood with axes and using the banghy. A bout is represented, sewn together with hemp or back. processely as in many pairs of India at the present day. Beds, like the ordinary charpoy, ornamental scats or thrones and footstools are used.

23. Of musical instruments, one may observe the drum, long horns (like those blown now-a-days in temples), flutes, guirars, harps, and the double Roman pipe-

24 Banners appear with diagonal stripes like the British Union Jack: garlands and emblems upheld by long poles, and umbrell of State are carried in

procession.

25. The Buddhist sculptures of Gandhara found on the frontiers of Alghanistan are of about the same period as the Sanchi bas-reli fe. In them we see the effects of the Greek and Person artistic influence, which filtered throughout India. Although more reflued in execution and design, and more classical in style, they give us no such varied pictures of manners and customs of India, eighteen hundred years ago, as we have here

## Appendix F.

#### Gwalior.

(The Illustration) are from Photographs reproduced by Hellegraviers)

1. Until recently Gwalior was an out-of-the-way city, the old mail road between Agra and Bombay passed at a distance from the fortress, which was earely seen except by those whose duties located them at Morar or by an oceaslonal traveller. The rallway, bringing Gwalior within four hours' journey from Agra, tends to a greater influx of visitor and to a greater interest in and knowledge of the rare antiquities of the fortress and surroundings. The e became ruined from age, neglect, warfare, and military occupation, but I regret to record that travellers removed stone carvings, pieces of coloured tile-work, and other fragmentary relies, whilst a few years ago whole columns were taken to adorn gardens in Morar, and stones found their way to places even beyond. At the time of my visit in November 1880 the late Colonel Willoughby. Orberne, Resident at Gwallor, was interesting himself in the preservation of antiquities. Major (then Captain) Keith, an officer of the Royal Scots quartered in the fort, had, with the aid of a committee composed of Colonel Osburne, General Gordon, commanding at Morar, and Major Crowdy, R.E. Executive Engineer, and a grant of R1,000 from Cantonment Funds, succeeded in rescuing the fine temple known as the Teli-ka-mindir from ill-tratment as a soldiers' coffre shap, also in collecting same of the scattered acalutures.

2. I recommended Colonel Osborne to continue such work and to sk the Agent to the Governor General in Central Imba to apply to the Supreme Garment for Major Keith's services as well as for a grait of R5,000 for the follow-

ing works:-

(1) Rescue of carved pillars and stone tragments from the debris surrounding so many of the monumental failldings of the fort (2) The collection of these carved stones at the Tell-ka-mandir.

(3) Cleaning the beautiful stone carving of the temples called the two Sas Hahn and the Teli-ka-mandir, the remo al from them of the plaster put on by the Muhamm dans, and the cutting away of destructive vegetation.

(4) The removal of the coats of whitewash from the carved trellis and

masonry of the courts in the Man Mandie Palace.

3. The appointment of Major Keith and a grant of R5,000 having been same tioned by the Government of Indla, work commenced, and that officer has been

engaged at various season on it up to the end of 1883.

4. I visited Gwalior in July 1881, and found the cleaning of the sculptures in the temples to have produced the most satisfactory results. I reported accordingly, and make some suggestions to Sir Lepel Griffin, who, as Agent to the Governor General, has taken practical interest in monument 1 perservation in Central India. I again went to Gwalior in March 1882. The court of the Man Mandir Palace had been evacuated by the Commissariat, and cleaning, a moval of whitewash, removal of modern partitions, and general repairs had progressed satisfactorily. The Tell-ka-ptandir and two S. Bahu Temples were still in hand, and repairs progressing to their roof, and towers. Approaches had been made to some of the Jaina caves in the face of the rock outside the fort,

and Major Keith was busy collecting and arranging fragments of sculpture I

the enclosure around the Teli-ka-orandir.

5. In May 1882 His Highness the Maharajah Scindia contributed R4,000 for repairs, this sum being supplemented by a grant of R2,500 from Imperial fund Colonel Bannerman and Colonel Berkeley, who have successively been Political Residents at Gwalior, as well as Generals Gordon and Dunham Massy, commanding at Morar, took much interest in Major Keith's work, and did what they could to promote it.

6. The following may be consulted for information about the Gwalior auti-

quities -

Vol. II of the Archæological Survey of India, by Major-General Cunningham: Mr. James Fergusson's History of Indian and Eastern Architecture: Monsieur Rousselet's India and its Native Princes, and Major Keith's Report on the preservation of Gwalior Monuments (obtainable from the Superintendent of Government Printing in Calcutta).

I will therefore confine myself to describing the accompanying plates.

### PLATE No. 1.- Jain Statues.

7. The statues represented in the plate are those on the south-east face of the fortress and exercised in the steep cliff below its walls. All the Jain rock sculptures of Gwalior were mutilated by Baber in A.D. 1527, only 60 years after they were made. They are unique in Northern India for gigantic size and carloes as showing how the primitive custom of rock exeavation was handed down to mediaval times. The south-east group is by far the largest and most important of all those cut in the Gwalior rock. Although the excavation here depicted is incomplete, the figures themselves were perfect before Baher's time. Their ornaments and canopies are still of the most elaborate designs.

## PLATE No. 2-Palace, Fort Gwalior.

8. This is one of the most remarkable. Hindu palaces extant in India, and was commenced by Raja Man Singh between A.D. 1486 and 1516. The Gwalior Fortress situated on a steeply scarped elongated hill runs north and south: one mile and three-quart vs long, and of a width varying from 600 to 2,800 feet. The old city of Gwalior lies at the foot of the hill to the north, Scindia's modern city, the Lashkar, being to the south at a distance of about a mile.

9. The palace stands on the east face of the fort 300 feet above the plain it enjoys a commanding view of the country and is a conspicuous object for miles. The east face of the Man Mandir shown in the plate is 300 leet long by about So feet in height, broken at intervals by six massive round towers with domes.

10. The entire front, with its successive additions by Vieramadity, Jahangir, and Shahjahan, is not included in the view, but the more picturesquand earlier portions of the palace are shown, commencing on the left with the Hathyar Paur on Elephant Gate connected with the façade of the buildings in which Raja Man Sing resided.

but are now cleared, repaired, and cleaned, so that their singular architecture can be admired and studied. Drawings of the latter have been prepared in my office well as elevations of the conth and east façades of the palace, drawn to

a scale of four feet to the inch, and coloured to show the various ornamental hands and nickes of tile-work. The beliegravure presents a good idea of the cutline of the building, but it is not possible to rive a correct impression without the aid of coloured plates. The tile-work is still perfect on portions of the walls and very brilliant with designs of plantain leaves, figures, animals and bands of ornament in red, blue, yellow, and green. A good deal of the glazed snamel has however become detached

13. The architecture, which in the walls of the Man Mandir is purely Hindu and, in its donner, of Moslem origin, supplies an early instance of the endeavour to blend the two styles—later on accomplished with so much success in the

Emperor Akbar's buildings

13. Batter visited Gwalior in 1527 A.D. He describes the domes as having bren covered with plates of copper gilt. He also states that the front of the palace was originally covered with states, which, as General Countingham observes, has fortunately fallen off and left the whole front of the fine natural

tint of the light-colour Gwalior sandstone.

14. Although much has been done to repair the interior of the palace, more is necessary to secure the south and east from from falling into greater dilapidation. It restoration be avoided, this can be done at a moderate cost; it being merely necessary to strengthen and tie those portions that are out of plumb or insecure, and to prevent rain and vegetation from doing mischief to the walls and roofs.

#### PLATE No. 3.—Interior of the larger Sas Bahu Temple.

15. There are two temples called "Sas Bahu"—the larger built in the shape of a cross 100 feet by 63 feet; the entrance is to the north and the sanctum to the south. The whole is greatly raised probably the result of the Muhammadan occupation of the fort in the thirteenth and fourteenth centuries. The tower of the sanctum is entirely gone and the superstructure of the central half much damaged. But in spite of dilapidation the fine appearance of the original structure is not difficult to picture. The building dates from the early part of the eleventh century. Unlike most temples of its class and period the Parch is provided with two stories. In other respects—in the form of the columns, their bases and caps—in the domes of horizontal courses and treatment of the roof, the temple resembles those at Chittore, at Khajuraho, at Udaipur, and at Nagda. The appearance of Brahminical sculptures shows it to have been used by Hindus, but this is no proof that it was unused by Jains, as sculptures of both sects occur in the same building, as for instance in the Jain Tower and Jain Temple [the latter called the Sanga Chaori] at Chittore.

16. The temple was occupied by the Muhammadans, the Hindus excluded, and the sculptures partly mutilated and partly covered with succe. Major Keith has removed the china and whitewash, the beautiful carvings bring now trivealed. He also made the roof weather-tight and strongthened the exterior masonry. General Cunningham had in 1844 propped some of the tracked heams, repaired the broken plinth, and add it a flight of steps to the entrance.

### PLATE No. 4.-Jama Masjid, Gwalior.

17 The Jama Masjid is below the north in end of the Gwalior Hill near the Alamgeri Gate. It is built of light-coloured and tone and a Livourable special of late Mogul architecture. The date, according to Sir William Shoman, is A.D. 1663. The Muhammadans tried to thise subscriptions for its repair, but failed.

#### PLATE No. 5 .- Modern Mausoleum.

18. The Chattri of the Scindias in the new town are of solid construction and beautiful design. The example illustrated unites an unusual simplicity of outline with great elaboration of detail. Excepting some of the buildings at Udaipur in Rajputano, this is one of the most successful modern princely huildings I know in India. Unfortunately it is thought necessary to periodically whitewash the walls, and the sharp outline of the sculptures is disappearing.

#### PLATE No. 6.-Shop Front, Lashkar-Gwalior.

to. Many of the shops in the principal street of the Lashkar are decorated with projecting balconies of carved stone pillars and screen work. Although whitewashed like everything else, the houses are most picturesque and pleasing in appearant. Such architecture is capable of application to modern Indian baxanes, and lumishes models for the various municipalities that are now trying to introduce improvements throughout the Empire.

## Appendix G.

## Chille gurh in Meywar-Rajpitam

(The Ille mateurs are from Phot graphs reproduced by Heliogracour.)

6. Chittore is over 60 miles north-east of Udahuar It was little known to Emopeans, being in the heart of Rajputana until the Malwa branch of the Rajputana-Malwa Railway brought it within twelve hours of Ajmir,! The station is about half a mile from the present town, beyond which towers the ancient turtress on a hill 400 feet high and three miles long by half a nile wide. The ascent is a mile to the upper gate with a slope of about one in lifteen.

2. Bappa, the ancestor of the present Meywar Rann, established himself at

Chitture in A.D. 728.

3. The hill is enclosed by a fortified wall and covered with the remains of palaces, temples, and tanks. A description of Children in the Koman Rasa, or story of Rawat Khoman, written in the ninth century A.D., runs as follows:—

"Climiterkole is the chief among the St counterend of appropriate the hill on which it stands round out of the level plain beneath, the Tilac on the forebond of Awiri (the earth). It is within the grasp of no for, nor can the vastals of its chief kines the sectional of lear "The lowers of defence are planted on the rock, nor can then inmates even in deep knowalism. Its kotars granusces are well filled, and a reserving the latter, and wells are conflowing " "There are 21 January, many linds for children, and colleges for every kind of learning; many emisses the Boedie in Eq. and the 18 years less of arrivance."

4. The Moslem invalers of India made an attack on the fortress as early as A.D. 836, but the first sack of the stronghold took place about 1303 A.D. under Ala-ud-din Khilji. To communerate a brilliant victory over Mahmud of Malwa, the Rung Khambo erected the great tower in Chittore, and from the communecement of that prince's pro perous reign (A.D. 1440) much attention was bestowed on the architecture of the country. Baladur Shah of Gujerat sacked Chittore for the second time in A.D. 1533, and 35 years later the third sack was conducted by Akbar. Since then the buildings have been left unrepaired and the capital moved to Udaipur.

5. Besides the two towers there are some 30 tanks and wells in the lortress ten principal temples as well as numerous palaces. The whole area needs careful investigation and survey, more specially as the Maharana of Ildaipur has commenced to repair the various buildings in which he may well take a pride.

Sr The one Rue passed it in 1015 A D., on his way up country, but does one come to have been

# PLATE No. 1.- Jain Tower of Sri Allat. View from the South.

6 Major-General Cunningham, Director General of the Archæological Survey in India, in 1871 unearthed some Jain statues at Muttra, which were ascertained to date from the time of Kanishka (i. e., A.D. 85 to 120), and these appear to be the earliest traces of Jainism yet discovered. Jain architecture attained great perfection between tooo-t200 A.D. at Mount Abu, at Girnar, and claewhere, but the singular point about the style is that so little is known of

the process of its development.

7. The tower of Sri Allat supplies a very important intermediate example dating A.D. 806, and is dedicated to Adnath, whose representations are repeated many hundred times outside the building. The height of the structure is 76 feet, but was probably So feet to the original apex of the roof. A central staircase winds up a square shaft through six stories to the lantern on the top. Sculptures and mouldings cover the exterior from the base to the summit, rendering the appearance most elaborate and picturesque. Many of the architectural forms and details are found to be repeated in Indian temples of a later date. Its preservation is therefore important; not only is its architecture reflected in the monuments of Chittorgarh itself, but it supplies important evidence of how the Jain style grew anterior to its period of greatest perfection.

8 I have had this building carefully surveyed, and reported in detail on the

repairs necessary.

PLATE No. 2.-Tower of Victory built by the Rana Khambo. ditto. Detail of Lower Ditto PLATE No. 3.-Portion.

o. The most prominent monument of the hill is the Pillar of Victory erected by the Rana Khambo in commemoration of the defeat and capture of Muhmul

of Malwa in A.D. 1439.

to. It is said to have cost go lakhs of rupces, and was constructed between A.D. 1442 and 1449. Built throughout of stone, and measuring 30 feet wide at the base by nearly 130 feet in height, the tower is in itself a striking object, whilst its position on the summit of the Chittore Hill gives it the advantages of command over the surrounding country. The style is Jain and resembles that of the smaller Jain tower which as far as is known is the earliest monument of the Chittere fortress.

tt. In the older example the height is under 80 feet and the central staircase winds up from base to summit through a central shaft divided up into six floors.

12. In the present case there is a height of nearly 130 feet (the present dome the tower through nine floors. The architect was not content with a single central well. The second, third, fourth, tifth, sixth, and seventh floors have each a square compartment in the middle surrounded by a gallery up both of

which the stairs wind alternately.

13. Each story is lighted by trellis windown, and the angles and recesses not intersected by steps are utilised for sculptured statues and ornaments. The exterior surface of the tower is broken up into nine principal divisions, each furni bed with its windows, bahistrades, and caves or chajjas and canphasized by columns, pilasters, and numberless horizontal bands or cornices. The whole is covered with semplanes, and most of the gods of Hinda mythology are represented wherever niche or panel occurs. The present dome is a modern

repair Mr. Fergusson saw the tower in 1839 with its original Jain root.

#### PLATE No. 4.—Ahar-ki-Darwaza.

t4 Near the Tower of Victory stands a fine stone temple, the Mokul-jt-ka-mainlir—dating from the 15th century A.D. The exterior is admined with elaborate and interesting friezes of figures which appear to depict real scene in history. North and east of this temple are two gate buildings, that to the east, here represented, opens into the street of the Sindhi Baxar, and the mud houses which encroach on it right and left might with great advantage be removed. The architecture of the gate is purely Hindu; the delicate carvings are applied with taste, but vegetation is destroying the fabric, which, unless speedily strengthened, will fall to the ground

## Appendix H

## Palace at Udaipur in Meywar, Rajputana.

(The Illustration are from Photographs reproduced by Heliogravure.)

1. When Udaipur was founded by the Rana Udai Singh in A.D. 1558, he come ived the Idea of creating an artificial lake, on the margin of which to huld a palace. The Arwali mountains, the great feature of Meywar, surround the locality, and by raising a dyke or bund across the heautiful valley, streams were dammed up to form the Pachola Sagar. The city, which can be now reached from the Rajputana-Malwa Railway at Nimbahera, a distance of 64 miles, is situated on an elevated strip of ground parallel to the shore of the take, and crowning the ridge stands the palace over 100 feet in height.

2. The pile of stone and marble grown by the various additions of succes-

sive Ranas presents a most picturesque and imposing appearance.

3. In the midst of the lake which the palace overlooks are two Island residences, the Jagmandir and Jagmayas, and but for their domes, kiosques, and palms, the view reminds one rather of the English lakes than of an eastern valley

4 The Udaipur Palace consists of a group of buildings dating from A.D. 1594 to the present day. The first gateway leading from the city was built by Partale Singh in 1594 A.D.—a plain unpretending-looking Hindu structure surrounded by crenelated walls; beyond this in the Tirpolia or Triple doorway of graceful Hindu-Sarascenic architecture built by Sangram Singh, in 1711 A.D., to the left or west of the intervening courtyard are a set of 8 Torans or trium-

phal arches creeted by successive Maharanas.

5. Passing under the Tirpolia one comes in view of the picturesque western façado of the palace. The Bari Mahal or great court is nearest on the right or east. It was completed in A.D. 1597 by Amara Singh I; consists of five stories, and has a handsome superstructure of mathle loneifully wrought into corbelled windows and trellis acreens. The superstructure or upper story rests on a markle string-course carved with bas-reliefs of elephants. The palace is confronted by a long terrace and colonnade where the Rana's elephants are kent.

6 Leaving this, one passes a plain and lofty building surmounted by domes and cupollas, used by the zenana. Further on to the south is a picture sque palace of Karan Singh's time. A.D. 1616, and beyond this again the Maharana's

modern residence

7. The upper story of the Bari Mahal contains an open garden called the Amar Belas, completed by Amara Singh II in A.D. 1711. It is surrounded by marble trellis, kiosques, and pavilions with hand one doors ornamented with ivory [see Plates 3 and 4]. In the centre of the court is a tank encased with

hage slabs of marble.

8 The Barl Mahal posses sea a number of courts, gallerles, and halls built in excellent native styles, but it is curious here and there to see evidences of European influence. One room dating A.D. 1716 is hard with Dutch tiles to presenting windmills and skating scenes of Hulland, Biblical subjects, &c., another dating A.D. 1857 has glazed niches in the walls filled with English China figures and Buhennan glass. Another room is faced entirely with Chinese plates of the old William pattern.

### PLATE No. 1 .- Jalnavas in the Palace.

of The Jalinavas, or ! fountain palace, was built in A.D. 1828 by Jawan Singh close to the margin of the lake, and forms a glift for landing or embark tion. The columns are square and of a plain Hindu design, the wall at the back being decorated with coloured glass music representing ligures of women and the Rajput peacock. Water channels and fountains edge the wall and render the pavilion cool and pleasant.

## PLATE No. 2.-Coloured Glass Mosaic in the Palace.

to. Glass mosaics are in great favour at Udaipur and occur in the Island nalaces of Jagmandie and Jaguavas, both of which were commenced about A.D. 1623. A court of the latter has recently been decorated in a very tasteful manner with this work.

11. Shah Jahan built a Shish Mahal in the Agra Fort (1637 A.D.), and very beautiful examples of mirror momies exist in the palace of the Jaipur Rajas

at Amher dating probably from 1620 A.D.

12. The work became popular with the Sikhs at Labore and Amrit a, but lost some of its earlier refinement. The heat gless mosaics I know are at Udaipur and Amber. The designs at the former place me of great delicacy, and besides floral patterns include representations of figures in brilliant colouring.

13 The mirror throne in the plate is very rich and parkling. Situated in the centre of the western front of the palace it overlooks a court to the east, the walls of which are adorned with peacocks in niches rendered in glamosaic.

### PLATES Nos. 3 & 4.-Wooden Doors, of the Bari Mahal, inlaid with Ivory.

# PLATE No. 5.-Wood and Ivory Door in the Chandre Mahal.

14 The upper story of the Barr Mahal, which, as previously stated, I an open court containing a garden, has several hundsome wooden doors, two of which are here represented. An apartment in another part of the palace. called the Chandre Mahal, has also some well designed doors, one of which is the subject of the third plate. In describing the doors of the Darshani gate at Amrit ar, I have undeavoured to show how Indian marquetry developed from the famous Somnath gates, of the early part of the 11th century A II. down to the work of to-day. The old Punjab cities possess a variety of beautiful medieval doors carved in wood, and at Conjeveram in the south the Palimin quarters are full of wooden portals of excellent execution and design It is by the study of such examples throughout India from north to south that the art of the wood-carver and in-layer can be regenerated.

15 The doors here represented are in disrep ir and require to be taken care

of, or they will fall to pieces.

## Appendix I.

Illustrations of Graca-Buddhist sculptures from the Yusufsas District.

(The Plates are from Photographs reproduced by Heliogravure.)

1 With the permission and assistance of the Punjah Government, I directed some excavations on the Swat and Buneyr frontiers, in the Ynsufzal District, thirting the winters of 1883 and 1884. A large number of Greec-Buddhist aculptures were discovered from 12 ancient monastic sites, and having been arranged in groups, according to the buildings they belonged to, the Lieutenaut-trovernor, Sir C. Aitebison, presented them to the Museums at Lahore, Calcutta, Madras, Bombay, and Rangoon. They have all been photographed, and a selection of the best subjects, together with illustrations, furnished by the Director-General of the Archeological Sarvey of India, of previous explorations will be published in a work under preparation by General Cunningham and me, to be

called the "Buddhist Sculptures of Gandhara."

2. Before describing the sculptures here illustrated, I venture to make some general remarks on the singular character of their architecture and ornament. The first impression given by a mere glance at any of the carvings is the strong influence of Greek art; but when we come to carefully analyse the while subject, the composing elements are curiously mixed. General Cunningham has described at some length the Greeco-Bactrian architecture of Yusufzai, and those who desire to form their own conclusions would do well to study the Archaeological Survey Reports, Vol. II and Vol. V; also to read Mr. Fergusson's chapter on the Gandhara Monasteries in his "History of Indian and Eastern Architecture." Of this, however, It is quite certain that Alexander's invasion left a strong impression on the att of Northern India. The use of Greek forms of ornament became general in the Cabul Valley, in the Upper Punjab, and in The Corinthian order reproduced itself all over Yusufzai, the Doric order in Kashmir, and the Ionic order at Taxila (Shahderi, hetween Attock and Rawalpindi). But Alexander had conquered Persia before he penetrated to the ludus, and he seems to have confirmed in ludia a knowledge of the paluces at Persopolis. The Indo-Persian capital is frequently found in Yusuleni; is colours also in Madras, at Amcavati, in Combay, in the Bedsa and Karli caves, in Bengal, at Buddha Gaya, and in Central India, at Bharhut and at Sanchi. Whether Persian and Greek art had made itself felt in India before Alexander's time is hard to say, as our previous knowledge of the country is at present so meagre. The Fort at Ranigat in Yusufrai has all the appearance of great antiquity; the walls are very massive, and constructed of large blocks of hewn granite laid carefully as headers and stretchers. Many of the times are over o feet in length, and mortar of very great hardness is used; but instead of being pointed, the joints are filled with thin slabs of stone or slate. The main entrance is a pointed archway cut in the horizontal layers of stone walling, and rigraging into the body of the stronghold, probably joins a similar passage on the west. The arch, instead of finishing in a point, has a rectangular termination similar to the section of an ancient Etruscan tomb at Care! dating from many centuries B.C. It might be hastily concluded that the reinted archway at Ranigat is Saracenic, but the interior of the Fort his

See Vol. 1, Ferguson Hintery of Architecture in all mixture page 364.

remains of several Buddhist Topes with sculptures in stour and plaster resembling those ordinarily found elsewhere in Yusufzai, and dating from about the commencement of the Christian era. I obtained a collection of a piecduring my visits. The Ranigat gateway, therefore, completely prove that nounted archways were in use in Northern India before the hirth of the Prophet. The antiquity of Ranigat is a subject for speculation, General Cunningham endeavours to identify it with the Fortress of Aornos which Alexander captured about 326 B.C., and if this identity could be established to architecture would supply an important sequence to the very early Polasgic art of Greece. A gateway at Thoricus in Greece, dating from about 1000 BC. res miles the Ranigat entrance in the curvilinear form of doorway, as well as in the horizontal construction. Another circumstance connected with the Graco-Bactrian architecture of Yusufzai is the appearance of hemispherical domes built on the principle of borizontal layers. The dome of the Trensury of Attens at Mycenie, which is a very antique example of Pelasgic art in noticed by Mr. Fergusson us that adopted by the Jaina architects in India; and the Treasury or Granary which I discovered among the Sanghao ruins seems to me to form a most Important link between the Pelasgic Treasures at Mycenæ and Jaina architecture, and shows that the mode of raising a semicircular duma on a square chamber by corbelling out the corners of the square and forming an octagon found its way to India before either the lains had commenced their wunderful syst in of constructing domes over pillars, or the Muhammadan had introduced their elaborate methods of doming over square chambers. I baux of no other example of a square chamber, corbelled out at the corners und domed over, that is not Muhammadan. It has generally been assumed that a construction such as appears in the Sanghao granary is to be traced to Muham. midden prolitects. Here, at all events, is an example which completely up ats the theory. The masonry resembles that used in all the Buddhist manaateries in the neighbourhood, some small windows and niches in the walls are of unmistakeable Buddhist architecture and the building is above, and quite close to, the group of structures where two coins of Kaniskha's A.D. 80-1 to, and nor of Gondophares, A.D 30.60 (who is said to have killed St. Thomas) were bound, It is, therefore, tolerably certain that the date is not later than so A.D., and may be much earlier. The Asoka Inscription at Shahhargarhi is certainly 250 BC. and from this time until the Muhammadans overran the Peshawar valley in the eighth century A.D., the Buddhist and Hindu religious held the upper hand? Whilst the Yusufzai antiquities furnish good structural examples of early forms of Graco-Bactrian architecture, their sculptured bas-teliefs often contain represent buildings and their ornaments. Perhaps the most striking architectural features that adorn the Gandhara Monasteries are to be found in their statuary and Corinthian capitals of columns and pilasters. General Cuntringham brought away a remarkable series from Yasufzai, some of which are in the Calcuita Museum and some in the Lahore Museum. No capital of any size were discovered by me, but a small pilaster and several small haves and c pitals of columns were found at the various sites explored, all are utualstakeably classical, and executed with delicary and taste. In the Yusufzai ruins we have, therefore, a basis of indigenous art adapted to the requirements of Buddhist religious unfinance, and flavoured with reflections from the Greek and Persian orders of architecture Besides this, we have artistic representations of no mean order, of the Buddhist tales and lables which are associated all over India and Buddhist countries with the life of Gautama.

<sup>&</sup>lt;sup>1</sup> Ferlahra says that the Morlems greatly increased in A.H. 700, and ultrahed pressed in d.P. max. They were mintered by the tilter of Glore, Khill and Kabul suation - preselected Library

# PLATE No. 1.-Sculpture from a mound near the village of Mahomed Nari.

3. The claburate piece of carving represented was found by Mr. Dempster, CE. Executive Engineer, Swat Cauxis, and he kindly allowed me to have t photographed. In the upper right-hand corner we have a very perfect repreventarium of a hemispherical dome on pillars with Corinthum capunis. Whether the domed roofs were of actual leaf seems doubtlut. The columns below recertainly taken from stone models, and the domes may have been of stone with a leaf ornament applied to the surface. A somewhat similar domed building is represented in a has-relief of the railing of the Bharhut Tope in Central India the date of which has been ascertained by General Canningham to be 150-170 B.C. Over the head of the right-hand figure is the Buddhist arch, pointed at the top, but circular inside, and it reproduces what is familiar to us in the Buddhi t cave in Bambay-in various Buddhist sculptured and painted representations of buildings and in the monulithic Vibaras adapted from Buddhist archito ture by the Hindus at the Seven Pagodas in Madras Whether Venice trading with the East gut the hint from India or not, the circular archways in the upper part of St Marks at Venice (dating from the eleventh century A.D.) resemble this Buddhist arch, and have the same pointed termination outside. We have also in this sculpture a tolerably perfect representation of a chapel or norbe cusheined in a trefoil arch. The column on Buddha's left is distinctly Indo-Persian, as may be seen by comparing the capital with those at Persepolis. Dentile of a classical form enrich the various montdings and the mil here used ornamentally is copied from the railings which usually surround Indian Buddhi t Topes General Cunningham has given me the following note: "The small figure at the top represents Buildha on his horse Chamla leaving his home by night. The central beare is Buddha teaching, with a royal figure standing on each eide. Below is a row of eight Bushlhas."

## PLATE No. 2.-Group from the Monastery at Saughao.

The site where the culptures were dug is perched on a steep spur, and was the first excavation done under my superintendence in January 1883. The building revealed two distinct periods, and consists of a basement containing small topes, and of a superstructure of plain apartments, built obliquely over the basement apparently without reference to its plan.

The real piners were found in the basement and belong to the older period, noins of Kan inka, AD So to 120, were found in the superstructure and belong to the more modern period. Since the photograph was taken. I have pinced many of the fragments tog ther, and so rendered the subjects more intelligible.

The collection is for the Labore Museum.

### PLATE No. 3.-Figure from the Monastery at Sanghao.

This is a very inclose piece of sculpture. The subject occurs again in a small stone knob! hund among the rains at Sanghao, and a smillar, although more broken, statuette was inserthed at the same place. The object occurs again in a fragment dug up at the Upper Monastery at Nuttu. The representation is evidently trace ble to some legend. General Cunningham Identifies the figure a Maya, the mother of Huddhat being carried up to the Trayastrinsha Heavens after her death, where, it is said, she was "born again." The mode of representing this legend is suggested by the tamous statue, by Leochares

General Connection. (round a stone states of a prince at famulgathi, and in the head-dress to a both or a with a semana and easter. The carried is in the Calcuma Message.

(B.C. 326, when Alexander's influence was being felt in India), of Gauyn ele, being carried off by Jupiter's Eagle.

## PLATE No. 4.-Group from the Monastery at Sanghao.

No. 1 is a fragment of a panel showing figures with joined hands. No. 2 is another representation of May 2 and the fragle. No. 3 is a small pilaster, with a Corinthian cap and the shafts ornamented with figures. This pattern of column 15 very often met with in Yusufzai. No. 4 represents a doorway with a catellated superstructure. The figures in the entrance appear to be welcoming a person of distinction. No. 5 aman holding a knife or dagger, kneels over a lying figure. A very Greek-looking warrior stands behind with spear and shield. A figure with uplifted hands stands under a tree (date-palm, Phanix Sylagetr 1, often to be seen in Yusufzai). No. 6. Here Buddha is represented being welcomed by some people outside a walled town or castle. One figure is prostrate at his feet.

# PLATE No. 5.—Groups from the Monasteries at Sanghao and the lower site at Nuttu.

The fragment on the left represents Buddha on a throne supported on lionable is surrounded by numerous supplicants. The centre sculpture represents a chapel or small temple. In the upper part of it is the fundus triple ladder, or liight of steps, by which Buddha des ended from the Trayastrin ha Heavens accompanied by the Gods Brahma and Indra. At the foot of the steps is the nun Pandarika, who had been changed to a man by Buddha, who was aware of his wish to see him. Under trees is the worship of Buddha a turban and him. The sculpture to the right represents a standing ligure of Prince Sid thartha, with an unhirella over the halo round his head; a woman is on the right. The lewer sentpure on the left represents Prince Siddhartha and his wif Yasodara. They are seated on a throne in a Palace. The Prince has a wreath in her left hand. Columns with Corinthian sapitals support circular arches on each flank. Several figures are represented in an upper galiery. The two fragments in the right-hand corner form part of a trieze, in which are represented the Nirvana of Buddha, and a fire-alter which may have represented the prophet's funeral pile.

# PLATE No. 6.—Sculptures from the Lower Monastery at Nuttu and Monastery at Saughao.

The upper piece represents a chapel or niche with Buddhas and disciples. In the centre is a part of a frieze with small relic-altars. Below are two fragments of a circular band with sculptures of figure, and wette-

## PLATE No. 7.-Group from the Monastery at Sanghao.

No. t is a representation of Prince S'ddhartha before he left his home to become a mendleant. The head and shoulde are long per erved. The Prince wears an elaborate turban with plane, a necklet, and weeklace with dragon-headed clusp. The halo around his hald is his his omamental, with an edging of flowers. On the right is a small figure with turban and plane in an attitude of homage.

Nos. 2 and 3 are fragments of a circular frieze of boys and garlands. Nos.

No. 5 is a fragment, the principal figure being a woman holding a small mirror. The presence, behind, of Devadatta and his club, indicates that some plot was probably being laid for Buddha.

#### PLATE No. 8.-Sculpture from the Monastery at Sanghao.

This is one of the panels placed between pilasters to surround the topes at the monastery. It represents Buildha's visit to the king and queen of the Nagas or snakes. Devadatta, Buildha's hostlle cousin, stands on the left ith the usual club in his hand. The meaning is that Devadatta has entrapped Buddha into visiting Nagas in hopes of their putting an end to him, but the divine influence is too strong, and they worship him. Devadatta, enraged at his want of success bolts up the mountain.

#### PLATE No. 9.—Sculpture from the Monastery at Sanghao.

This is part of a frieze with pilasters at Intervals. The stone has become

much decayed on the surface.

The subject is the visit of Buildia to the emaciated Tirthika Uruvilwa Kasyapa, an ascetic who lived in a forest of bael trees. On Buddha's left is him consin, the evil-disposed Devadatta. Beyond Uruvilwa is a very life-like tigure of an ascetic bowed down in contemplation.

#### PLATE No. 10.—Group from the Upper Monastery at Nuttu.

Although covering a small area of about 80 feet by 60 feet, this site yielded me very luteresting and elaborate stone sculptures, most of which were found round two small central topes. Pieces of plaster figures were also found. The two topes have a diameter of to feet, and with their domes and tee or finishs, would have been about 20 feet above the floor level of the monastery. I have been able to piece many of the fragments represented in the plate, and the whole collection, arranged in small boxes, is intended for the Imperial Museum in Calcutta.

### PLATE No. 11.-Fragment from the Upper Monastery at Nuttu.

This represents the birth of Buddha under the Sal tree in the Lumbini Gardens. The birth occurred when Maya was travelling from Kapilavasta to Koli, and in a garden of Sal trees called Lumbini. On Maya's right should be Brahma receiving the young prince who was born from Maya's right side; and beyond him Indra. This hab of the panel is missing. Maya is standing under a tree; her right hand raised and holding one of the branches; her left hand is round the shoulder of her sister; beyond is a female attendant holding a chaori of State, and above is a harp emblematic of Heavenly music.

I discovered a very perfect representation of this subject from a small tope

at a place called Marjan.

### PLATE No. 12.—Fragment from the Upper Monastery at Nuttu.

This is part of a frieze of panels separated by Corinthian pitisters, and represents a stated figure of Buildha surrounded on the right by laymen of rank, and on the left by females. Buddha is shown with mon taches, which is never done to the sculptures that I have seen in other parts of India. The halo around his head is Islaged by the foliage of the Jack tree (Arte carpus integrifulia) which is not local in Yusufzai. The palms at the sides are the date-palm (Phanus

Sylvertris). The water vessel held by the women has a round handle on the top, also a spout, and resembles vessels in the Bharlut scall tures (B.C. 150-170) being one of the many proofs of the antiquity of the Yusufzai buildings.

## PLATE No. 13.-Group from the Upper Monastery at Nuttu.

The three upper pieces are small supporting figures or caryaldes, and show

variety in the attitudes.

The frieze below probably represent, in part, the procession of the four kings to present their bowls to Buddha. On the right is a broken representation of a seated Buildha, with a bowl in front and two kings offering him two smaller ones. The horses have bridles and head-stalls, which were not used in India until after Alexander's invasion.

#### PLATE No. 14.-Sculptures from the Upper and Lower Monasteries at Nuttu.

The cremation of Buddha's body is, I think, represented in the first sculpture. To the left is the worship of remains of some kind on a cough, surmounted by an unibrella of State, and to the right a fire-altar being feel with oil by two men with hoods similar to the two figures holding staves in the death of

Buddha, Plates 16 and 22.

The second sculpture has several interesting points about it. The atyle of ornament is Græco-Roman, like the sways or garlands which decorate the entablature of the temple of Vesta at Tivoli, dating 70 B.C. The garland has a Buddhistic significance, and to this day garlands of cloth are carried In procession in Burma to adorn topes or sacred trees. They are frequently represented in the Bharhut and Sanchi sculptur s, and 5 en depending from the sacred Bodhi tree and placed round topes. Two of the ngure is an the garland have wings, and play a guitar, and gong or tambourine. The two supporting figures are playing the drum and cymbals.

## PLATE No. 15-Group from the Upper Monastery at Nuttu

No. 1 is a fragment of a chapel or niche representing two women, one playing a drum and the other a harp. Although it has not rome out distinctly in the photograph, the latter has sumething in her hand, which may be a " fleetrum" similar to what is shown in the Bharliut sculptures as being used to examd the ancient harp. The small drum is beaten with a stick, and not the hand. The floral horder are similar to those to be seen on the Sanchi gates, and may be traced back to Grecian ornament employed in the monument of Lysicrates at

Athens (B.C. 334).

No. 2 is that of a female beneath a tree | date-palm, Phani Sylveteis), a hough of which she is bolding in her right hand. There are three other similar figures (see plate No. 10) one holding a bough with her right hand, the other two holding houghs with their left hands. It would thus appear they adorned the two sides of some important sculpture. Besides drapers round the legs, three wear a sort of tunic, one opening down the centre. Three wear scarves round their shoulders, three wear girdles of heads found the loins with a clasp suspending a leaf. The hair is waved over the forchead, and plait if into a sort of wreath over the head finished by two knobs. They all west tolerably large pendant estrings, nucklaces of buads, torques, and bangles round the wrists and ankles.

Nos 3 and 4 represent Buddha scated on a throne, surrounded by shaven-headed monks or disciples and laymen. The disciples are sented on smaller thrones. Buddha, in both pinels, has mon tach s, and the nimbus round the head is fringed by leaves of the date-palm. Stone sculptures of Buddha and his disciples found in other parts of India show the face clean shaven, and the right arm and shoulders have;—here the right shoulder is draped—probably in deference to the colder climate of Yusufzai.

#### PLATE No. 16.-Sculptures from the Upper Monastery at Nuttu.

The long frieze of hoys and vines is the only example I have seen from Yusufzai. The subject represents a general teast on grapes. In the centre two boys are struggling for a bunch. On the right is a goat on its hind legs eating vine leaves; the whole panel is curiously antique-looking in the rendering of the figures, &c. The wild grape vine (Vitis vinifera) grows on the higher hills of Yusufzai, and is also common in Cahul. The lower piece of sculpture represents the death of Buddha. (See descriptive note on Plate 23.)

#### PLATE No. 17.—Group from the Upper Monastery at Nuttu.

The subject of the woman in the talons of an eagle is shown in Plate 3, and previously described. Here the body is being lifted, the feet just leaving the ground. The fragments at the four corners of the plate call for no special a units. In the centre is a panel of the death of Buddha, and a panel of Buddha aurrounded by worshippers. The peculiar halo, or nimbus of flame round the head of the Salnt and his standing on water, represent his control over the two must potent elements. The small sculpture below is a figure bowed with the weight of the superstructure borne on his back. At Persepolis, figures are found supporting plinths with uplifted hands. The caryatide figures of Greece support on their heads in place of columns. The Telamones are another form of architectural support, but all these are erect, whilst the Yusufzal human figures are all cronched or kneeling in an atlas-like attitude. (See Plates 13 & 21.)

#### PLATE No. 18.—Group from the Upper Monastery at Nuttu.

No. I is a niche or chapel representing a scated Buildha and two attendants in the upper part, the worship of Buddha's head-dress and hair in the centre, and a standing Buddha with six attendants in the lower panel. Nos 2, 3, 4 and 5 are fragments of a circular friexe, and chiefly remarkable for the case and grace in the pose and drapery of the figures.

#### PLATE No. 19.—Group from the Upper Monastery at Nuttu.

The fragment on the left represents the worship of the Dharma-chakra, Triratna and Tirchakra symbols, by shaven-headed monks. Some months after the photograph was taken, I obtained the right half of the panel containing more monks.

The centre figure represents a seated layman of rank. The throne is supported on legs representing flour. The right hand is upheld. The left hand

holds what resembles a small vessel.

In other similar statues a lotus flower is held, probably a sign of rank. The usual torque amulet and chain with clasps are worn round the neck. The fair is bound in a simple manner by a hand of beads or jewels. On the right

is a portion of a panel representing a chief or king, on his throne with lion legs, under a canupy. A small figure on his left is stanling on a Corntlian column, fanning him. Two scated figures are represented beyond. The two fragments underneath are parts of a narrow circular frieze that enveloped the base of u tope and represent a procession of ascetics

### PLATE No. 20.-Group from the Lower Monastery at Nuttu.

The bill had tallen in and partially overwhelmed this site but three small chapels were excavated which yielded these and other curvings. Besides these, there were many plaster figures attached to the walls, which were too fragile to remove. The stone carvings are destined for the Central Museum at Madras.

## PLATE No. 21.-Sculpture from the Lower Monastery at Nuttu.

This represents shaven-headed monks paying adoration to the Dharma-chakra or symbol of the wheel, which is surmounted by the Triratna, or symbol of the "Three Gems," above which are three wheels, or Dharma-chakras. The Triratus is described as the triple object of veneration-Buddha, the law, and the church. The wheel symbol, is the wheel of the law of Buddha. The attitude of the supporting figure with quifted hands, is suggestive of Atlas.

## PLATE No. 22.—Sculpture from the Lower Monastery at Nuttu.

Buddha filed at the age of So at Kusinara or Kusinagara, east of Gorakhpur, at a place called Kasia, and passed away—as he was born—ander a S41 tree. He is here represented lying on a lour-legged heil with a matter and pillow, surrounded by the chiefs of the Mallians of Kusinagara. The event occurred in B. C 543. The evil-disposed cousin Devadatta is represented at the back with a diabolical expression of gice. A seated figure, with his back turned, is shown at the foot of the bed. The prestrate figure is probably one of the disciples ill from grief. The bud on which Buildha is lying might be a modern charpoy, and the presence of a mattress and pillow show that civilization in the first century A.D. was more advanced in India than it was in many western countries at the same period. The scene represented in Plate No 16 is between two pilasters with Corinthian capitals. Close to Buildha's bed is a tripod. from which suspends what looks very like a modern soda-water bottle, but which was probably a porous vessel used for cooling the drinking-water of the Saint in his dying moments.

## PLATE No. 23.—Part of a niche from the Monastery at Mian Khan.

The Mian Khan monastery had only been parially explored when the Plates Nos. 23 to 30 were taken. It must have been a place of importance, the enclosure measures 84 feet by 66 feet, and contains some eighteen topes. No relies or coins were formil, but the sculpture, although very broken, are numerour, and of considerable interest. They are destined for the Imperial Museum in Calcutta.

The sculpture here represented is past of a niche or chapel.

A king and queen are scated at a small table engaged in gambling. The queen is wated on a stool with her feet on a foot-stool. The king is on a throne, his feet also on a foot-stool. The right arms of both are on the table. The left arm of the queen is uplifted as if throwing dice. In the back-ground are two female attendants with chaoris. The king has a jewelled plume in front of his turban. General Counlingham describes the upper part of the nichas containing Buddha's alms-bowl under un umbrella as an object of worship.

## PLATE No. 24.-Figure from the Monastery at Mian Khan

This is the upper part of what must have been a large statue, and measureabout a feet 9 inches in height. The mode of dressing the hair is very elaborate A hand of jewels is wurn across the forehead; the massive carrings drag down the lobe of the ear; a chain with dragon clasps is worn round the neck as well as a torque; a chain of stones or beads is worn over the right shoulder, and a string of amulets is warn across the body under the right arm, which has an armlet with a human head represented on it. Such rich ornaments show this to be a royal person, probably Prince Siddhartha before his asceticism.

## PLATE No. 25.-Figure from the Monastery at Mian Khan.

This is a very perfect figure about 1 foot 2 inches in height. The halo denotes some connection with the church, but the ornaments are those of a king or chief. The mode of dressing the bair with a top-knot and jewelentwined is peculiar. The right hand, uplifted, has a representation of a lutus flower in the palm-another royal sign. Armlets are worn on both arms and the left hand holds a small vessel for water, scent, or perhaps relies. Beside the drapery round the loins, there is a cluth over and about the shoulders leaving the right shoulder hare.

## PLATE No 26.-Group from the Monastery at Mian Khan.

The small fragment at the upper lift is part of a small circular frieze representing ascetics. The three surrounding pieces represent Buddla and his disciples. The two lower carvings are terminal with boys, on lions, pulling their tails. I afterwards found the centre place representing a boy mounted on a standing lien.

## PLATE No. 27.-Group from the Monastery at Mian Khan.

No. 1, a small frieze of figures. No. 2, part of a circular frieze, representing ascetic life-a figure struck down by a storm. In the center is a small tree with large leaves (Jack tree - Area Carens integrifolia)
No. 3 is a fragment of a standing Buddha. No 4 is the worship of symbols.

Nos. 5 and 6 are parts of a frieze, probably representing one of the Jatakas, or

birth-stones of Buildha.

## PLATE No. 28.—Group from the Monastery at Mian Khan.

The huads Nos. 1 to 3 are particularly good, and show a variety of head-dress. No. 6, part of a garland frieze, is not so classical-looking as the frieze in Plate No. 14. No 7 is a sented Buildha and disciples. No. 8 is a sented chief under an umbrolla or canopy with surrounding attendants. No 9 is a narrow frieze of niches with Persepulitan pillars.

## PLATE No. 29.-Group from the Monastery at Mian Khan.

There is authing about these fragments not already described, excepting the lower centre piece, which is part of the hody of an elephant carrying a seated figure on a throne.

### PLATE No. 30.-Sculpture from the Monastery at Mian Khan.

This sculpture was found very much damaged it represents an oftendepicted scene. Devadatta caused an elephant to be drugged in hope of hicharging and destroying Buddha. People assembled at the city gate to withe the event, but instead of harm the animal does obeisance. Here we have a representation of walls with buttlements, and a doorway with sloping jambs like the Etruscan doors of the fifth and fourth centuries before Christ.

## Appendix J.

## Tomb of Jahangir at Shahdara near Lahore.

1. After the death of Akbar in 1605 A.D., his son Salim assumed the government of the empire under the title of Jahangir, "Conqueror of the world." Sir Thomas Roe, sent by King James in 1613 A.D., to the court of the Emperor, give us an idea as to the state of India at the time. Though judicious, Roe is prouse in praise of the magnificence of the court, and speaks in high terms of the courtesy of the nobility and their entertainments. Referring to the natives he writes—

They are a point of a strong and quick apprehension, ready wit, and very great funcy and ingenuity in all manner of one works. This, their deficate stained cloths, their silks, their the carpets of so many mingled colors, Inabort, all their flowered works in silk, gold, and elliver pointed evaluates of. Then they make a sure of calcutes, coxes, standishes, trunks, &c., with that exquisite skill and famy that they deserve to be recknowed amongst the master works men of the world in all respects. They'll inlay (with elephant's booth, mother-of-pearl, chony, at see theffice sire) anything that a capable of bung wrought upon. They work abundance of upocet of again, owned in, and where fine stones, pollsh and cut all manner of jewels, and understand the value of it in as well when they have done. They know how to buy and self-these may ticklish commodities, and he that gets the better of them he a bargain must be a very elever man indeed."

There was a great influx of Europeans about the court of Jahangis and considerable encouragement given to their religion. Tavernier, writing in A.D. 1651, tells us that the Emperor had a palace at Lahore, on one gare of which was a crucifix and on another a picture of the Virgin Mary. The traveller remarks—

"Some have thought their marks of Christianity which was amountly pridesed in those country, but it is really nothing but a piece of flattery and hypocrisy of King Jahangiz to oblige the Partingouse to be his friends."

2. Jahangir's buildings, except the tomb of Akhar at Sikandra, which, if not his lastgu, was, as we see it now, the work of his time, are not on the same scale it magnificence as those of his father or of his son Shah Jahan. But amongst those worthy of particular notice are the Jahangir Mahal in the Agra Fort, built immediately after the death of Akhar; the tomb of Et-mad-ud-Dowlah (father of Nur Mahal, Jahangir's Queen) at Agra; and the gateway of the Sarai at Nur Mahal on the road to Ka limir, built 1620 A.D. In 1624 A.D. Jahangir paid his second vielt to Kashmir, built many palaces as well as summer-houses and completed the celebrated Shahlimar gardens near Srinagar immortalised by poets and travellers. He was fond of Lahore and there limit the tomb of Anar Kali; the Mati Masjid in the fort, now used for storing rupees; and the greater Khwahgah or sleeping palace, also in the fort.

3. In 16.2 A.D he fixed his court at Lahore, and when he died in Kashmir in 1927 A.D. his body was taken back to Lahore where it was buried in the cirden of Nur Jahan. On the south side of the white marble sarcophagus, which rests in the centre of the huilding erected by Nur Jahan is inscribed "The glara at tamb of His High Majesty, Asylum of Protectors, Nur'ddin Muhammad,

the Emporor Jahangir, 1037 A.H." (=527 A.D.)

<sup>\*</sup> Vices | 1 magir's Touth are given in Hardinge's ison of the Governor General) "Recollectioned India," folio London, 1847.

# Plate No. 1.—General Plan of the Tomb of Jahangir (Chromolithograph—Double Plate.)

4. Shahdara is on the west bank of the Ravi and about 3 miles from Lahore. Here are—

The tomb of Jahangir with its square enclosure and garden.
 The sarai for the accommodation of native visitors to the tomb.
 The tomb and enclosure of Assi Khan (Jahangir's Minister).

(4) The tomb of Nur Jahan (Jahangir's wife).

5. The whole place, except the actual tomb of Jahangir, looks ruined and neglected. Bahadur Shah, Ahmed Shah, and Ranjit Singh cruelly matreated the buildings, and Ranjit Singh carried off many of their marbles and ornamental building materials. The occupation by the British troops after the Sikh war caused additional damage. Since that time the sarai between the tombs of Jahangir and Asaf Khan has been occupied by the Punjab Northern Railway as an ongine yard. Holes were knocked into the walls, the grounds broken up, various gateways being converted into dwellings for the Railway employés. This latter evil has been remedied since 1881, and the place is at least no longer misappropriated.

6. The tomb of Asaf Khan has (by the Sikhs and others) been stripped of its marble and stone facings; only small portions of the encaustic tiles are left in the arched entrances. The building has received slight repairs to secure what remains. The north gateway of the enclosure to the tomb was converted by the Rallway authorities into a dwelling, and is now in the hands of Bhai Mian Singh, who has proprietary rights of all the buildings of the enclosure. The gateway, with its handsome tile-work, should be freed of the modern additions which obscure it. Jungle and cultivation have taken the place

of the original garden

7. The tomb of Nur Jahan (not indicated on the plan, but to the south of Asal Khan's) is in ruins, having been used as a quarry by the Sikhs; and Fergusson says, half the splendour of the temple at Amritsar is due to the marbles plundered from this mansoleum.

# Place No. 2.—Elevation and Section of Jahangir's Tomb—(Engraving —Double Sheet.)

8. Although the tomb of the Emperor has been better treated than those of his wife and minister, it is in considerable disrepair. Mr. Thornton, in the Gazetteer of Lahore, informs us that—

"I mourns the loss of an elegant lattice-work paraper of marble which surrounded the roof and galleries of the minars, and must have given a lightness to the structure which as present it does not peasess." (Vertied by General Cunningham.)

9 It is also asserted that a marble dome once rose from the centre of the roof over the vaulted chamber which contains the tomb, but that Aurangaib removed it in order to insult the remains of his unorthodox predecessor. General Cunningham heard the same in 1838 A.D.

no. I do not believe that the central building had a dome, but Aurangeib may have taken down the structure. At all events it appears from the accounts of Tavernier that Aurangeib carted marbles to Aurangabad from Labore; and as there are no quarries in the neighbourhood, it may be inferred that he com-

The entrance gate of the seral at Nur Mahal built by Johangle is covered with animals and

menced the pillering of buildings which Ranjit Singh more vigourously contipund.1

11. The marble pavilion in the Hazurilangh, near the Labore Fort, which I believe came from the centre of Jahangle's tomb, has abundant evidence having been designed by Muhammadans. In setting it up on the present site, the Sikhs introduced a good deal of their own ornament, but the modern work can be easily detected, whilst the older portions, such as the columns of the upper apartment, the trellis railings, and much of the terrace inlaid work is of

the same style and period as the tomb of Jahangir.

12. The central platform over the sarcophagus (see Section, Plate No 1) measures 53 leet 6 inches square, and the marble paving, by which it is covered, has indications of having supported a structure above. The inner line of a band of red sandstone measures 45 feet square, the exact dimension of the exterior wall of the Hazuribagh pavilion. When the plan of the latter b applied to the plan of the platform other coincidences become evident, the centre apartment of the Hazuribagh pavilion falling over the present ekylight or the central chamber of the tomb, and its columns taking an alignment over substantial vaultings.

13. The central chamber of Jahangir's tomb, nithough approached by four passanges, is shut in on three sides by handsome screens of pierced marble, and

can only be entered on the west side. (See Section, Plate No. 1.)

14. The bullding in its present condition is very incomplete and neglerted. A most careful scrutiny of all its parts is required before arriving at a just appreciation of the original design. Many years ago clumsy repairs were applied in coloured plaster to the inlaid portion of the red sandstone façade of the colonnade (see Plate No. 3). The interior of the verandah was up to 1881 covered with plaster and whitewash, a partial removal of which now reveals a handsome tile dado (see Plates Nos. 6 and 7) and in parts coloured frescos. It is doubtful whether the terrace of marble mossic covering the entire building keeps out tain; it is discoloured and decayed. A shower brightens up the colours of the various slabs, but the effect is transient and soon disappears under a warm sun.

15. To restore the tomb and surroundings in the same thorough way as the Taj would cost a large sum; meanwhile repairs have been executed by Lieutenant Abbutt, R.E., who was appointed by Sir Charles Aitchison to the

Vol. I. Unouments Aucieus et Modernes de L'Hindousten L. Langlès, Paels, 1-21, page 144. spezielu. el Amangahad, "Le Voyageur Tavornier, qui jurommit ces cantons en 1645, vit en all le prince Muralman (Aurangrih) occupe e construire dans ex nouvelle ville une magnifique mosquée un tum-

The intitute pasa consocial, et is available as a mark of his expressance in the loose motous and licentime paractore of Jahangia. Such is the story, but more probably the building was anyon. The edition is of great eximit of corporating an open west access, with a latty minaret at each angle. The odifice is of great eximit.

charge of the Punjab Archæological Sub-division. The security of the buildings. should be assured and means taken to bring the various ornamental portions into their original prominence. Cleaning off dirt and whitewash from existing mosairs and tile-work, and securing them in their places, cleaning and renovating the coloured paintings of the interior, seem to me remedies which should be unsparing.

Plate No. 3.—Details of Marble and Stone on the outer Face of the Tomb (Chromolithograph—Single Plate.)

Plate No. 4.—Details of Marble and Stone Pavement (Chromolithograph— Single Plate.)

Plate No. 5.—Details of Marble Mosaic and Fresco (Chromolithograph— Single Plate.)

16. Although not so extensive or of such coatly materials as Akhar's tumb at Agra, this building and its surroundings must have satisfied the most lively and appreciative imagination. The outlying gates of the enclosure were brilliant with freecos and glazed tiles, whilst all the resources of the art of inlaying in marble, stone, and pottery were lavished on the central tomb. There is no structure in

India which presents so many classes of mosaic work as this.

1.—The whole of the red sandstone façade of the colourade is incrusted with black and white marble disposed in panels and niches filled with outlines of vessels, flagons, &cc. The granment fare detail of colonnade, Plate No. 3) is dignified without too great severity, and the detail patterns are appropriately subordinate to the leading lines of the arcade and corner towers.

II.-The four minarets, the most prominent leatures of the building can be seen from a considerable distance, and are inlaid with rights bands of variegated marbles and yellow stone. (See Plate

No. 3.)

III.—The terrace and verandah are paved with musaics of marble and stone laid in geometrical patterns. (See Plate No. 4.)

IV .- The sarcoplingus and the circular busses of the spandrils of the colonnade are of veritable "Pietra Dura." (See Plate No. 5.1

The art of intaying for architectural purposes may be classed as follows -Aurient Massics. Dating from the time of the Egyptians in the era of Constanting the Great, A.D. 320. The hest mown among these are the Roman unusies which date from 80 B.C. and are three deselfied :-

1.-Opus Testulatum, consisting of small tessera of marble composing a geometric figure such as the pavements at fompail.

II -Open Sectile, consisting of allow of muchle producing a pleasing affect through . shape colour, and rain introduced about 50 B C

lii.-Open Figurm, a more extended scale at shade and colours word then is () pas Trees turn and the material compounded of after and alamina in all - er.

Florenitas Mesaics or Pintis Dara, introduced to 1533 A D. m inmation of the success Open

Sectile.

V.-Lastly, the dados of the verandah and four approaches to the central chamber are of glazed tile mosaic. (See Plates Nos. 6

and 7.)

17. There can be little doubt that the graceful and delicate foliated Pietra Dura which is used as exterior ornament for the first time in Jahangir's tomb and became so characteristic a feature of the Taj at Agra, and Shah Jahan's other huildings, was introduced from Florence. The Fabrica Ducale of Florence was founded by Ferdinand I., Grand Duke of Tuscany, in 1558 A.D. The first imitation of the Florentine work that I know is inside the Jagmandir Palace at Udaipur, the very building in which Shah Jahan was located when a fugitive prince, and from which I think it not unlikely he got the idea of the work.

18. A very bold class of floral mosaic had, it is true, been introduced into the gateway of Akbar's tomb at Sikandra in A.D. 1613, but the example in the Jagmandir Palace of ten years' later date is much nearer related to the Florentine

Pictra Dura.

19. The following are some of the principal oriental mosaics :-

(1) Palace of Asueras, Persia, B.C. 519-550.

(2) Greek mosaic pavements, time of Alexander the Great, B.C. 323.

(3) Byzantine glass mosaics, A.D. 350.

(4) Ala-ud-din's gateway at the Rutub, Delhi, inlaid with bands of marble, A.D. 1310.

(5) Tomb of Tughlack Shah at Delhi, Inlaid with bands of marble,

A.D. 1321.

(6) Mosaic pavement, Alhambra, A.D. 1354.

(7) Tomb stone of Ahmed Shah's wife, Ahmedahad, inlaid with marble and mother-of-nearl, A.D. 1430.

(8) Tomb of Hoshang Shali at Mandu, tesselated pavement, A.D. 1432. (9) Mosaic pavement in coloured plaster, Jamali Kamali Tomb, Deliil,

A.D. 1528.

(10) Kila Kona Musque, Delhi, marble mosaic, A.D. 1540. (Introduction of Pietra Dura at Florence, A.D. 1558.)

(11) Akhar's Mosque, Fatehpur Sikri, geometric mosaics, A.D. 1571.

[12] Rainn Ungan Palace, Udaipur, mosaic pavement, A.D. 1571. (13) Akbar's tomb, Sikandra, floral mosaics, &c., A.D. 1613.

(14) Jagmandir Palace, Udaipur, Pietra Dura, floral patterus, A.D. 1623-

(15) Jahangir's tomb, Lahore, mosaic and floral Pietra Dura, A.D. 1627. (16) Etmad-ud-Dowlah's tomb, floral mosaics, Pietra Dura, Agra, A.D.

(17) Jess Mandir Palace, Amber, black and white marble mosaic, A.D.

(Influence of Austin de Bordeaux at Agra and Delhi.)

(18) Shah Jahan's palaces, Agra, floral Pietra Dura, A.D. 1639. (19) Shah Jahan's Faj, Agra, floral Pietra Dura, 1648.

(20) Shah Jahan's palace, Delhi, black marble Pietra Dura, floral patterns introducing birds, animals, and Orpheus, A.D. 1648.

(Four skilled musaic workers sent from Florence to the Great Mogul, 1688 A.D.J

#### Plates Nos. 6 & 7.- Details of coloured Tile Mosaic (Chromolithographs-Single Plates.)

20. The tile dados in the verandali and passages (see Plates Nos. 6 and 7) are particularly handsome and of the mosaic class, which became on lar in the Lahore buildings. The employment of glazed tiles for architectural purposes dates from Rhamses II. (B.C. 1452). The Chinese also used coloured porcelain in their buildings from an early period; but as far as I have been able to ascertain, the first Muhammadan building in which glazed tiles were used is the Villa Viciosa, mosque of Cordova, in Spain, which, according to Prisse, dates from A.D. 055, and according to Fergusson from A.D. 1200. General Cunningham dug up a quantity of blue glazed tiles outside the Kutub-ul-lalam Mosque at Delhi, the date of which must have been the latter part of the 12th century. He also identified the date 500 of the Hijra on a blue glazed tile in the Lahore Museum, which would correspond to about 1107 A.D.

The following oriental huildings are good examples of the early employment

of tiles :-

(1) Jami Masjid, Budaon, 1223 A.D.

(2) Tomb of Bahawal Huk, Multan, 1250 A.D.

(3) Mosque at Tabriz, Persia, 1294 A.D.

- (4) Mosque of Chey Koum, Cairo, 1354 A.D. (The earliest use of glazed tiles in Cairo.)
- (5) Tomb of Tamerlane's father, Samarkand, tile mosaic, 1360 A.D. (6) Tomb of Tamerlane at Samarkand, tile mosaic, 1404 A.D.

(7) Man Singh's Palace, Gwallor, tile mosaics, 1507 A.D. (8) Jamali Kamali Tomb, Delhi, tile mosaics, 1528 A.D.

(9) Tomb of Muhammad Mumin at Nakodar near Jullunder, 1612 A.D.

(10) Jahangir's tomb, Lahore, tile mosaics, 1627 A.D.

(11) Wazir Khan's mosque, Labore, tile mesaics, 1635 A.D.

The use of brightly coloured tiles in buildings is particularly grateful to the eye in hot and sandy localities, and I well remember at Sukkur in Sind, where the vegetation is, to say the least, scarce, how gladly one's eye rests on the little patches of gay tile-work in the tombs and buildings of the town.

# Plate No. 8.—Details of paved walks (Chromolithograph—Single Plate.) Plate No. 9.—Details of Alcove and Wall (Engraving —Single Plate.)

21. The garden of Jahangir's tomb is laid out in to equal squares, separated by paths of brick laid on edge, channels of water, and fountain tanks. The paths about the centre building are a species of mosaic, the brick-on-edge being laid in geometric patterns bordered by black marble (see details C, D, E, Plate 6). A wall with alcoves at the angles surrounds the whole, on all four sides, but the river has washed away the corner to the south-east (see Plate No. 1). The encroachment has, for the present, stopped There are gate buildings on the north, south, and west. That to the west is of red sandstone, inlaid with marble mosaics, also decorated with fresco.

22. It is most desirable that means should be found to put the grounds of the two tombs in good order, and the jungle and cultivators gut rid of. The place is distinctly one of the most interesting in Labore, and is resorted to by both

Europeans and Natives.

## Appendix K.

### Shahlimar Bagh, Lahore.

1. The number and extent of the ruins which surround the present walled city show that Lahore and its environs covered a circle with a radius of about 3 miles. The whole area between the Shahlimar gardens and the River Ravi is filled with the remains of tombs, mosques, and numerous gardens, which during the reign of Shah Jahan must have formed a vast and picturesque group worthy of an imperial city.

2. The Shahlimar Bagh, or Imperial Garden Palace, some 6 miles east of the Lahore Fort, was designed and built in 1637 A.D. for Shah Jahan by All Mardan Khan, in development of Jahangir's Shahlimar gardens on the city

lake at Srinaggar in Kashmir.

3. This latter well known summer retreat, measuring 500 by 207 yards, is enclosed by a masonry wall 10 feet high, and arranged in four termices. A mountain stream traverses the water channels and cascades of the garden. There are various pavilions, the uppermost being the best and surrounded by fountain.

4. The Labore garden, measuring about 520 by 230 yards, is shut in by a masoury wall 20 feet high, and arranged in three terraces with a number of alcoves, gateways, and isolated pavilions; on the east side there is a Turkish Bath or Hammam. Water from the Bari Doah Canal traverses the channels.

castades, and fountain tanks from south to north.

5. The disturbed state of the Punjab in the eighteenth century placed the palaces and buildings of the Moguls at the mercy of Afghaus and Sikhs. The invaling army of Nadir Shah encamped in the gardens in A.D. 1738. Ten years later Ahmed Shah's camp was fixed in the vicinity. Shortly after, 1740, Ranjit Singh restored the gardens which had gone to ruin during the troublems times of Ahmed Shah, but he removed the marble pavilinns and substituted plaster structures in their place.

6. The grounds, although Government property, are at present let out on lease for the cultivation of fruit, the consequence being that the upper and lower plots are too thickly planted, and cared for without regard to arbori-

culture.

7. Lieutenant Abbott, R.E., Assistant Engineer, Archæological Sub-division, Punjah, has done a good deal to improve the condition of the grounds and prevent their being flooded, but the flow of water through the channels is still out of control, and the lower terraces get frequently swamped, thereby causing deterioration of the masonry walls and walks. Repairs have also been applied to some of the pavilions, &c., but a good deal remains to be done before the place can be said to be in proper preservation.

8. The Shahlimar Ragh is one of India's Imperial works, and as such has, I submit, a claim to the consideration of the Governor General in Conneil, as well as of the Punjab Government. Some assistance has, for the past two years, been given in money from Imperial funds, but to place the grounds and buildings in substantial repair will cost a large sum, probably \$\mathbb{R}\_{50},000; they are resorted to by large numbers of residents, fluropean as well as native, and could under scientific direction be rendered both profitable and attractive.

o Mananmadan Princes all over the world showed as much taste in their dwellings as in their mosques and tombs, but as the conditions of climate.

custom, and religion necessitated a special type of building, their palaces were not compact masses like those in Europe, but consisted in a number of detached pavilions, reception rooms of great and little state, sleeping and other apartments, scattered over large spaces and separated by trees and gardens; they were therefore more liable to succomb to the ravages of time and weather, or

to mutilation by invaders and commerors

10. Among the numerous Mogul Palaces known in India during the present century, only a few exist. Those in the Lahore Fort have been altered so utterly as to attract little attention. The Delhi Fort Palaces have given way to barracks, only some of the more precious buildings having escaped destruction. The Agra Palace, owing probably to the peculiar necessity during the mutiny of 1857 of housing in it families of English officers, has remained in some degree intant. A special pass from the Commissary of Ordnance ailmlts the visitor to the Palace of Akbar in the Allahabad Fort, but it is unrecognisable, except as a depôt for ordnance stores. All these were originally highly ornamental structures, with court-yards, gardens, and fountains, special halls for interviews with the Emperor and public durhars, women's apartments, galleries and christers, guard-rooms, &c. Old Indian miniatures, most of which have been acquired for foreign collections, give an idea of princely dumestic life. Ladies of rank are represented performing their tollets in little courts with fountainand trees; their husbands are shown seeking cest and repose in gardens of the seraglio. To qualify the heat and glare of the herce tropical sun was the sine of Indian architects, who got to well understand the value of enclosed courts with their cool shade, pleasant shruhs and flowers, running water, and splash of

11. The following are some of the principal gardens of the Mogul Em-

perors:-

### Baber, reisued A D. 1525-1540.

This Emperor built the garden and musque, called the " Cabul Bagh," at Panipat, Punjab, to commemorate his victory over hirahim Lodi, A.D. 1527. (Only a mosque and Baber's inscription remain, the garden no longer exist.) The body of Baber was in A.D. 1530 temporarily interred in the Ram Bagh, a well-known garden at Agra, but afterward removed to Cabul. Prince Kamean, brother of Humayun, when viceroy, was the first to begin garden-building at Lahore, and a pavilion of his is now used as a tall-house at the bridge of boats,

## Humayun, reigned A.D. 1530-1556.

Humayun's Tomb stands in the midst of a fine garden, which within the last few years was disfigured by use for cultivating tobacco and other crops. The leaseholder, a descendant of the last ling of Dolhi, derived his in me from the profits made out of the grounds. The gardens are now eared for.

## Aktor, respect A.D. 1556-1605.

Abul Fash tates that Akbur brought gardeners from Persia to Labour to cultivate grapes and meion. Akhar constructed garden at Fat hour Sikri, but nothing of importance. During his reign Marc Sigh made the Pilaram garden on the bund of the Tal Kontara Lake at the Foot of the Amber Pal ce, ne r J ipur. The garden of the palace of flawers at Urcha was also work of his time.

#### Jahangir, reigned A.D. 1605-1607.

Jahangir was a great gardener:-

I .- The Shahlimar gardens, near Srinagar in Kashmir, being the most important of his work.

11.-The grounds surrounding the tomb of Akbar, his father, at Sikan-

dra were laid out in his reign. It is said that Nur Jahan, his Queen, selected the sites of-

III .- The Nasim Bagh,

IV .- The Nishat Bagh,

V .- The Manusbal garden,

in Kashmir. VI.—The Vernag garden,

The following were constructed by the Emperor ;-

VII .- Garden of the larger Khwabgah in the Labore Fort (no longer exists).

VIII.—The Danlat Bagh at Ajmir.

IX & X .- The gardens of the two Island Palaces at Udaipur, the Jagmandir and Jagnavas.

Xl.—The Klushru Bagh at Allahabad.

XII -Garden round Etmad-ud-Dowlah's Tomb at Agra.

XIII .- Nur Jahan's garden at Shahdara, Lahore (where the Emperor was buried).

### Shah Jahan, reigned A.D. 1627-1658.

This Emperor built :-

1.—The Shahi Bagh at Ahmedahad (when Viceroy).

II -The Lahore Shahlimar gardens.

III.-The Haiyat Baksh gardens in the Delhi Fort (now destroyed).

IV.—The Anguri Bagh in the Agra Fort.

V .- The gardens surrounding the Taj at Agra.

VI.—The Kandarhari Bagh at Agra (where one of his wives was

VH.-The garden of the smaller Khwabgah, in the Lahore Fort.

Of his period were:-

VIII.-The Begam's Bagh, or Garden of Jahanara, Delhi (now the Queen's gardens).

IX. - Garden of Zeban Nishan, Lahore (only the gateway known as the Chauburji now remains).

X.-Roshanara Bagh, Delhi.

XI.—Pinjore gardens near Kalka on the road to Simla.

XII.—The Golahi Bagh, Lahore (only the entrance gate now remains).

#### Aurangeib, reigned A.D. 1658-1707.

This Emperor built no gardens of importance.

#### Modern gardens, after A.D. 1707, were-

I.-Kudsiah Hagh at Delhi.

11.-Garden of Saldar Jang's Tomb at Delhi,

III.—Ram Bagh at Amritaar | Raujit Singh's time.

V.-Gardens of the Begums of Bhopal.

VI .- The Bari Mahai at Udaipur has a gurden for its upper story, surrounded with marble trellis kiosques, and pavilions.

# PLATE No. 1.—Chromthographic Plan of the Shahlimar Gardens (Double Plate.)

12. As will be seen from the plate, the arrangement of the Shahlimar gardens follows the usual formal plan of the Muhammadans. On entering the gateway to the south, there are four square plots separated by water channels and a row of fountains down their centre. Each plot is alike, arranged as shown at O O O O. Between the west and east onclosure walls are two pavilions, one now used for natives, the other for European visitors. The latter was probably the women's apartments, as it is shut in from outside by a small projecting garden (not shown on the plan). Passing up the centre avenue, one reaches the principal pavillon and large tank, L I, filled with fountains and surrounded by ornamental flower beds. South-east of this pavilion is a building called the Khwabgah, or sleeping room, and in the centre of the east boundary wall of the grounds a Hammain, consisting of various domed rooms fitted with brightly painted doors. The terraces flanking the large central tank east and west are 14 feet below the upper garden, and 4' 6" above the lower garden. The tank and its walks are raised some 4' 6" above this intermediate terrace, forming, with its fountains and pavilions, the chief attraction of the place. The lower garden is broken up into four square plots, each arranged as at B B B B, and separated by water channels and walks. The gateways at E and D are decorated with tiles. The brick-on-edge walks are damaged by the overflow of the water from the channels, and the trees and shrubs closely packed present a jungly appearance.

# PLATES Nos. 2 & 3.—Chromolithographs of Details of the Work (Double Plate.

13. The coloured tile work on the gateways, shown at E and D on the General Plan, is of the mosaic class. The leaves and flowers of the different patterns are formed of separate pieces of tile, accurately cut and fitted, the colours being very brilliant. The enamel glaze is of light and dark green, white, yellow, orange, purple in two shades and light and dark blue. The tiled decorations cover both the interior and exterior of each gate, and the whole should be carefully preserved. It is very desirable for visitors to have access to the outside, which at present is not easy.

## PLATE No. 4-Engraving of Details (Single Plate.)

14. This shows the marble details of the fountains, &c., in the great tank at L L on the General Plan.

I Writing on 6th May 1800. Moorcust says: "I started at three and at nine tracked Shahlimat, the large garden hild out by order of Shah Jahan, where I took up my abode in a chamber arcted by the Ruja close to a well, and a reservoir which it supposes, and from which its up are made in play the Ruja close to a well, and a reservoir which it supposes. Rujat Slogh has to a considerable extent on each to perfect it is said to centain too highle, the whole southward by a well, in the traces put the period in repeir. It is said to centain too highle, the whole southward by a well, in the traces of shicks taid edgradys. In the middle of the garden is a large equate has her bodding mater formed with copper tubes for fanatales, and a white mather slope, carried at a welface of leaves and middle with copper tubes to fanatales, and a white mather. There are some open apartments of whee abelis, divided into congestments by lines of black mathle. There are some open apartments of whee mathle of ones story on a level with the hazin, which presents is because mather thanber, with recember on its order for lamps, before which water may be made to tail in shaets from a ledge rounding recember on its order for lamps, before which water may be made to tail in shaets from a ledge rounding the round at top, whight streams of water spout apthrough holes in the floor. This is called "Sawan Bladus" as imitative of the alternation of light and darkness with clouds and heavy showers in the tenant of the raine. The ground is leid out in platforms and is covered with train trees.

## Appendix L.

#### Lahore Fort.

# PLATE No. 1.—Plan showing the Original Buildings. (Engraving, Double Plate.)

1. The city of Lahore formerly "Lohawar" was founded between the first and eventh centuries of the Christian era by a Rajput colony. No Hindu remains have been discovered in evidence of the architectural pretensions of this period. The present buildings are those of the reigns of Humayun, Akhar,

Jalungir, Shah Jahan, and Aurangeib.

2 During Akhar's residence at Lahore (1584-1598 A.D.) he enlarged the fort and round it and the city built a wall, portions of which still exist. The Akhari Mahal, shown in the plan in the east portion of the fort, was a work of his time, but now demolished. He also built a Throne-room, which I imagine lay west of the existing Diwan-i-am. The present hospital occ. I am old Hamman and part of a half which is probably a portion of the Throne-room. The guteway leading from the Hazaribagh is also of Akhar's time.

3 Jahangir fixed his Court at Lahore in these A.D., and built the Acester Kharh, then the north face of the Fort. It consisted of a large quadrangle, with a colonisate on three sides, of red sandstone columns, carried with bracket capitals of the figures of elephants, griffins, and peacocks, resembling the orial mentation of the Jahangir Mahal in the Agra Fort. On the centre of the furth side which overlooked the River Ravi was a lofty pavilion, and on either life, at the corners, two chambers with elaborate Hindu columns. The buildings have undergone complete alteration for military purposes, but the two corner buildings could be restored. In the centre of the quadrangle was a garden and beneath the pavilions and columnades, under-ground apartments for refuge from heat. The Meti Marjid was Jahangir's work, and, although of marble, has been converted into a Government treasury. The style of its architecture is plain, but of an interesting transitional period. The building has been somewhat repaired and means taken to protect the marble from the hauling about of heavy treasure chests.

4. In the reign of Shah Jahan the Palace was enlarged. A smaller Khnahgna was exected, west of that built by Jahangir. The huilding still exists, although altered to suit the purposes of a chapel. The garden and surrounding buildings also remain, but the latter have been converted into quarters greatly to the detriment of their marbles. In front of the Khwabgah is the Arzgah, where the Omra assembled every morning to receive the Imp rial commands. Left, or west, of the Khwabgah were erected two huildings known as the Shirh Mahal, or Saman Burj, and Naulakka Pavilion. The Shish Mahal, with its sparkling mosaics of glass, is celebrated as the place where the British sovereignty of the Punjab was formerly recognised by Ranjit Singh. The Naulakka Pavilion is a costly marble erection, inlaid with "Pietra Dura." A new gato was opened into the Shish Mahal for the Emperor's private use, called the Hati Pul gate (or Hathiyar Paur), now the only entrance to the Fort. In the centre

Persolits age that is A.R. 143 (-750 A.D.) the Mealouse greatly increased; when having from their his they obtained possession of Kirman Peshavar, and all the lands adjacent; and that the Report Inhers, who was of the lamity of Almer, next his brother against those Alghana who were resolved by the trime of Khulji of Ghor and Kabul, just become prosclytes to beam.

of the Fort enclosure Shah Jahan erected the Diame-i-m since vandalised into a barrack, but the columns of marble and stone, and throne of the interior, are in site, and the rooms at the back (with their marble dades and coloured freaces, considerably damaged by whitewash) are parts of the original structure. The northern front of the Polace extended some 500 yards along the hanks of the river, which in Shah Jahan's time flowed under its walls. The whole wall surface was covered with elaborate designs in "Kashi," or tile mosaics, forming one of the most striking features of the Fort. Little is known by visitors of this tile work, as the space beyond the wall is sacred to the Commissariat Department, and not accessible to the public. It is well worth preservation; the designs include figures of men and animals representations of the sun and rodiacal signs. Detailed drawings of some have been prepared under Lieutenant Abbott, K.E.

5. The Mogul buildings in the Fort were used by Ranjit Singh: the Shish Mahal became a reception-room, and he added on a number of huddings, not improving to its appearance. He also made the Hazuri Bugh auxide to the west, and in its centre erected the marble pavilion, which, I believe, was originally the central feature of Jahangir's Tomb at Shahdara. Moorcroft visited Ranjit Singh at Lahore in May 1820, and his description of the Fort runs as

"Labore is surrounded by a brick wall, about 30 feet high, which extends for about 7 miles, and is continuous with the Fort. The latter, in which the Rayler sider, is surrounded by a will of no great strength, with loopholes for muskerry. A leasted of the Rayler wastes the first of its notifiers face, but it has no most on either of the remaining sides. The Palace within this uncloume called the Saman Burj, which is if many stories, is emirely faced with a what it proved in enumed, on which processions and combute of man and animals are depotated? The first placed in the wall. Several of the of buildings are in ruins 1 others are entire, and throw into shade the meaner structured discovered and the substitute of the first placed and the substitute of the first placed and the substitute of the

6. After the peace of 1846 the British troops were quartered in the fort, and since then the buildings have been so altered and destroyed as to attract hule interest. A great deal may, however, be done to bring what remains of the old architecture into prominence by resuming charge of the best buildings as objects of interest, and by freeing them of their present occupants and excrescences. The various recommendations submitted to Government are embodied in pages XXIII and CLXXXVII of my Annual Report for 1881-82, and page CIX of the Report for 1882-83.

Travals in the Himalayan Provinces of Himbarea &c., by Mr. W. Momeruft and Mr. G. Tre-beck from 1215-1825 A. D., London, John Murray.

## Appendix M.

### Golden Temple at Amritsar, Punjab.

t. Amritsar was founded in A.D. 1574 around a sacred tank from which the city takes its name "Pool of Immortality." The site granted by the Emperor Akbar to Ram Dass, the Guru of the Sikhs, became covered with temples and huts and was at first named Ramdaspur, from the founder. He made Amritsar the proper seat of his followers, the centre which should attract their worldly lungings for a material bond of union, and the obscure hamlet with its little pool (General Cunningham tells me there was a village named "Chak" on the site) has grown into a populous city and the great place of pilgrimage of the Sikh people. In A.D. 1756 Prince Timur, the son of Ahmed Shah Durani, expelled the Sikhs from Amritsar, demolished the buildings, and filled the sacred reservoir with the ruins.

In A.D. 1762 the army of the Khalsa assembled at Amritsar, the faithful performed their ablutions in the restored pool, and the first diet or Gurumutta was held. The same year Ahmed Shah destroyed the renewed temples and polluted the tank with the blood of cows. In A.D. 1764 the Sikhs became masters of Lahore, the chiefs ngaln assembled at Amritsar, proclaimed their

own away, and rebuilt the temples.

2. In A.D. 1802 Ranjit Singh repaired the principal buildings and routed

the temple with sheets of copper gilt.

3. The Tank, as it now exists, is about 500 feet square, and fed by the old Hasli Canal. The Golden Temple stands on a platform in the centre, and is approached by a pier, at the end of which is the Darshani Door or "Gate of Sights." The Tank is surrounded by bangahs, i.e., dwellings for visitors and pilgrims. To the east is a garden with several fountains, called the Guru-ka-Bagh made in A.D. 1588, and due south of this the Kaulsar Tank, 410 by 170 feet. Further east stands the tomb of Baba Atal (built in A.D. 1628). The whole place is full of interest although so comparatively modern. In repairing the Golden Temple, Ranjit Singh used many of the intaid decorations and marbles carried away from the tomb of Jahangir and other Muhammadan monuments at Lahore. It is stated in the official list of buildings of interest published by the Punjah Government in 1875, that the design of the temple repaired by Ranjit Singh was borrowed from the shrine of the Muhammadan Saint Mian Mir, near Lahore (1635 A.D.).

Saint Mian Mir, near Lahore (1635 A.D.).

4. At the request of Sir Robert Egerton, the late Lieutenant-Governor, I had a careful survey made of the Tank and buildings. It will therefore be more fitting to postpone a detailed description. The architecture is an adaptation of Muhammadan styles, flavored with a good deal that is of Hindu tradition. Birds and animals are introduced in the marble mosaics, and mythological scenes are depicted in the paintings of the interiors. A peculiar flat arch is of frequent use in the façades, and seems to have been universal in Sikh buildings

and tombs.

#### Illustrations of the Doors of the Darshani Gate.

No. 2.—Engraving of the Plan and Elevation (Double Plates.)

Nos. 2-4.—Chromolithographs of Details of Wood and Ivory (Single Plate.)

No.5.— Ditto Ditto (Double Plate.)

5. The doors of the Darshani Gate are of shisham wood, the front overlaid with silver, the back inlaid with wory. The silver plated front is ornamented

<sup>1</sup> See Captain Conningham's History of the Sikhs Loadon, 1849.

with panels only. The back arranged in square and rectangular panels with geometric and floral designs, in which are introduced hirds, lious, tigers, and sleer. Some of the ivory inlay is coloured green and red, the effect being extremely harmonious.

6. In January 1881, when I first visited Amritsar, I noticed the musaics to be suffering from dirt and neglect, and recommended their being periodically

cleaned and kept from cracking by careful oiling.

7. The earliest specimen of oriental marquetry that I know occurs in the famous Somnath Gates, now in the Agra Fort. The elaborate Saracenic patterns on them prove that, even if the wood frames were originally in the Somnath Temple, they must have been re-carved by Mahmud of Ghami. They date, at all events, from the early part of the eleventh century, and having been recently cleaned are discovered to be really of sandalwood.

Mr. Fergusson writes -

"The curveit ornaments on them are so similar to those found at Cairo in the Mosque of Ebn Toulous (A.D. 885) and other buildings of that age, as not only to prove they are of the same date, but also to show how similar were the modes of decoration at these two extremities of the Moslum Empire at the time of their execution."

8. The wooden mimbar or pulpit in the mosque of Qous, Cairo (twelfth century A.D.) and the marquetry in the Mehrab of the mosque of Nesty Qeyyourn also at Cairo (fourteenth century A.D.) are inlaid with ivory, the geometrical and floral patterns, which are most elaborate and beautiful, resembling

Indian work of the same class.

9. The doors of the mosque of Kharrete at Samarkhand (the building dates before 1405 A.D. when Tamerlane died) are of wood inlaid with ivory, in patterns very Indian in design, and as we know Tamerlane to have been much struck with Indian architecture when he invaded India in A.D. 1398, and to have carried off Indian workmen from Delhi to Samarkhand, it is probable that examples of marquetry existed there before the fourteenth century.

to. The earliest existing specimens of Indian marquetry I know are at Ahmedabad and Bijapur. The wooden canopy over Shah Alam's tomb (A.D. 1475) at the former place being handsomely incrusted with mother-of-pearl. The doorways of the Ashar Mahal (A.D. 1580) at the latter place are infaint

with ivory.

11. The canopy over Shelk Salim Chisti's tomb (A.D. 1581) at Fatchpur-Sikri

is of wood covered with tesserie of mother-of-pearl

12. The doorways in the Amber Palace (A.D. 1630) near Jaipur are of wood variously ornamented with-

1.—Carved panels.
11.—Inlays of ivory.

III.—And small lozenges of ivery which are incrusted with what is known as Bombay inlaid work. Unfortunately these doors are very much neglected and falling to rain.

13. The doors of the Bari Mahal (A.D. 1711) at Udaipur are of another species of marquetry, some being ornamented with small panels of wood overlaid with ivery, like the modern work done at Vizagapatam, only in far better taste.

14. The inlaid work of Bombay was imported from Shiraz and Persia, and is the least effective of any of the Indian wood inlays being extremely minute

and monotunous in design.

to The modern Hosbiarpur work resembles that in the Darshani Gate. It is a promising and rising art manufacture and could derive material for new patterns from the examples above quoted.

## Appendix N.

### Badshuhi Sarai at Nurmahal, near Jalandhur.

(The Illustrations are from Photographs reproduced by Heliogravure.)

1. The following description is given by Major General Cunningham, Director General of the Archeological Survey (see Report, Vol. XIV):—

The small town, Normahal, in the Jalandhar Doab, was named after the famous Empressed Jahangir, and in honour of her its fladshahi Sarai was built of unusual size, and with two highly-ornamented stone gazeways. Nurnothal is situated 25 miles to the east-southenast of Sultanpur, 16 miles to the south of Jalandhar, and 13 miles to the west of Phalor. The Sarai's 551 feet square outside, including the octagonal towers at the corners. The west or gateway is a double-storeyed building, faced on the outside with red sandstone from the Kutch pur-Sikri quarries. The whole front is divided into panels creammented with sculpture. There are angels and fairly, elephants and thinocarases, causels and horse, no kess and peacocks, with men on horseback and archers on elephants. There was also a timilar gazeway on the rattern side, but this is more only a cross of rain, and all the atome facing has disampeared. On the north side of the courtyard therets a muspid, and in the middle a fire well. On each side there are 32 rooms, each to leet to lacke square, with a vortandah in front.

The Emperor's aparements formed the counce block of the muth side, three storess in height. The rooms were leghts finished, but all their heauts is now concealed under the prevailing winteward."

# PLATE No. 1.—Side view of the west gate from the south, PLATE No. 2.—Front view of the west gate.

2: The west gate is with its minarets 60 feet high, and has a frontage of about 62 feet. The inscription over the doorway relates that the building was communed in A.H. 1028=A.D. 1618, and finished in A.H. 1030=A.D. 1620. It is a handsome pecimen of Jahangir's architecture, and a singular instance of how figures and animals were tolerated by the Mogul ruler. There is no other Muhammadan building in India so freely ornamented with such carvings. The projecting balcony windows on each side of the entrance are

of graceful design, with pillars and brackets in the Hindu style.

3. In July 1881 Sir Robert Egerton, the late Lieutenant-Governor of the Punjab, ordered the building to be repaired. I visited it in February 1882, had it surveyed and photographed, and on the 19th of June submitted plans and drawings to the Punjab Government, showing how the structure should be treated so as to follow the old architectural lines. In January 1883 I visited Nurmahal, with Mr. Harrington, the Executive Engineer of Jalandhar, and Ligatenant Abbott, the Assistant Engineer, Archeological Sub-division. The structure had been rendered secure and the carved masonry of the façade was in process of repair. Since then the work has been completed, and the approach road improved.

4. The Nurmahal Sarai shows in what luxury the Mogni Emperors travelled. There are many such halting places on the old road from Delhi through Lahore

to Kashmir, the following being some of those best known:-

I.—Sarai at Palwal (Gurgaon District), 300 years old.

II.—Wazir Khan's Sarai at Karnal, A.H. 1108=A.D. 1696. III.—Badshah Sarai Gharaunda (Karnal District), A.H. 1048=A.D. IV.—Kahul Bagh, Panipat, A.H. 924=A.D. 1527.
V.—Smalka Sarai near Panipat (Shah Jahan's time).
VI.—Sarai Lashkari Khan (Ludhiana District), Aurangzib.
VII.—Nurmahal Sarai
VIII.—Dakhni Sarai
IX.—Sultanpur Sarai
X.—Fatelabad Sarai (Amritsar District), A.D. 1574.
XI.—Nur-ud-din Sarai

XII.—Sarai Amanat Khan XIII.—Tank, summer-house and tower near Shekopura (Gujranwala Dis-

trict), Jahangir's time. XIV.—Naurangabad Šarai (Gujrat District), Aurangzild's time.

The following are of Shah Jahan's time:-

XV .- Yunguari Sarai, Kashmir, 35 miles south of Srinagar.

XVII.—Hirpur Sarai 4 24 4 4 XVIII.—Shahji Murg Sarai 4 14 4 4 XVIII.—Khanpur Sarai 4 10 4 10 11 11 11 11 11 11

XIX.—Baramula Sarai ,, 28 miles north west of Srinagar.

No. I is in use for shops: No. II has only its gate remaining; No. III is not used, but a fine structure; No. IV, only the mosque remains, and the inscription recording Baher's defeat of Ibrahim Lodi; No. V is used; No. VI is used; No. VIII is not used, but a fine building with the used; Nos. X, XI, XII are converted into villages, and little left except the gateways; No. XIII, the tank very large, and buildings handsome; Nos. XV, XVI, XVII, XVIII and XIX are of stone, and still standing.

## Appendix O.

General description of the buildings surrounding the Kutub Minar.

#### Plate No. 1.-Plan of the Buildings at the Kutub.

t. The Great Tower, called the Kutub Minar, stands to miles from Modern Delhi, and is surrounded by Hindu and Muhammadan ruins. Leaving Delhi by the Lahore Gate, the road passes the remains of the Jantar Manter, or observatory on the left and the mausoleum of Safdar Jang half-way to the Kutub on the right. The Jantar Manter was creeted by Raja Jai Singh of Jaipur in the reign of Muhammad Shah, 1720 A.D., for astronomical purposes. It consists of several buildings which, having remained unused are in a state of ruin. The Tomb of Safdar Jang creeted by Nawab Shuja-dulah, his sun, was planned after the model of the Tajat Agra. It is of red sandstone, surmounted by a markle dome, and occupies the centre of a garden, 300 yards square. From here one passes several ruined tombs on both sides of the road, and enters the Kutub grounds under an old archway.

2. On the left is the dak bungalow, where travellers can be housed for twenty-four hours. There are from here two roads, the chief continuing straight on through the northern part of the ruins, whilst the other diverges to the left and, passing between the two buildings of the dak bungalow to the planted grounds, surrounds the Great Minar, and then rejoins the main road. The local authorities keep up this part of the ground about the Minar, as a garden. The cool shade of the trees and pleasant aspect of the ruins sur-

rounded by turl are a refreshing relief after the dusty road from Delhi.

2. The earliest known city in the neighbourhood of the Kutub was that built by the Raja Dilu about 50 B.C., and was probably occupied by the Raja Dhava, who is sald to have erected the Iron Pillar, standing in the court of the Kutub mosque. The Raja Anangpal rebuilt Delhi in A.D. 676, but in A.D. 1052 Anangpal 11 constructed Lalkot, the ancient walls of which may be seen to the east and north of the Kutub grounds. In A.D. 1280 the Raja Pithura bullt the Fort of Ral Pithora to surround the Fort of Lalkot on two sides, and to protect the Hindu city from the Muhammadans. The circuit of this city in the 12th century was about 41 miles and encompassed 27 Hindu temples built with beautifully carved pillars. It is probable that these temples were ranged about the ground surrounding the Minar. Some of the pillars still standing, particularly those behind Kutob-ud-din's arches at (4) on the plan, have the appearance of being in their original position. When the Muhummadans under Shahab-ud-din ronquered and killed the Raja Pithora in A.D. 1193, the temples, and what is traditionally known as Rai Pithora's "Butkhana," or Idol temple, were standing; however, Kutub-ud-din, the ennobled slave and commander of Shahabud-din's army, who was left as Governor of Delhi, overturned the buildings and is said to have constructed the Masjill out of the materials and plllars of the Butkhana At present the natives regard the courtyard of the mosque as the original Butkhana. Kutub-ud-din built the great range of arches (4) to the west of the court, and there are inscriptions of his on the small gates to the north and east Shams-ud-din Altamsh added the ranges of arches (3) and (5) outside the court to the north and south in 1229 A.D. The Minar (6) commenced by Kutubnd-din was finished by Altamah in 1220 A.D. The tomb of Altamah (2) was constructed by his daughter in 1235 A.D. In A.D. 1310 the Emperor Ala-nd ombullt the gateway (10) and colarged the area of the mosque to the north and east. He began a second tower or Minar (1), which is now a heap of ruld emasonry. A small tomb (11) near Ala-ud-din's gate contains the remains of a Muhammadan Fakir, Synd imam Zamin, and was built in A.D. 1537. The above-mentioned buildings have recently been enclosed by a fence, A. It, C. D. E. F. G. H. J. K. L. M. and the gate of Ala-ud-din (10) repaired. It still remains to clean all the carved masonry of the various buildings, so that inscriptions and tracery may be revealed. The original floor of the lintkhana, or court of the Kittub Mosque, is covered with earth and stone flags, which alignly be removed.

4 Outside the Kutub enclosure, and about half a mile south-east of the Minar, is the village of Mihroli, famous for the tomb and mosque of a Muhammadan Saint, Kutub Sainth, who dued in 1230 A.D., also for two large P. lit of wells, one dating from 1052 A.D. and the second from 1263 A.D. Between the Kutub Minar and Mihroli is the tomb of Adam Khan (141, dating 1503 A.D. a building of great solidity, with a fine dome. It is at present used as a textuouse by the district police officers, and is remarkably cool. A similar, but smaller, building to the south of the Kutub enclosure is the tomb of Muhammad Kuli Khan (12), built A.D. 1550. This was converted into a residence by Sir Theophilus Metcalfe, when Resident at Delhi, and is now a hotel. Beyond is the tomb and Mosque known as "Jamali Kamali," 1528 A.D., to which extrasive repairs have been recently applied

5. In overlooking the Kutub rums as they exist, our principal historical interest lies in their being the record of the great Muhammadan invasion of India and the downfall of Hindu reign. Excepting where the materials of the pre-existing Hindu remains are used, such as carved pillars, brackets fintal, &c., the hundlings are the best of a few examples of highly ornamental Fillian architecture, and form a powerful contrast in their massiveness and vigour to the refined and elegant architecture of the succeeding Muhammadan rulers—the Moghuls—the builders of the sumptions Taj at Agra and the Fort and pal-

aces of Shahjahanabad.

6. Annexed is a classified list of the more remarkable monuments of antiquity in the Delhi neighbourhood. Those that have not already been cared for should be indicated by notice beards, rendered oversible by reads and paths, and cleared of squatters, reliagers, and their sattle. I have marked and classified them according to the orders issued by the Governor General in Council in November 1883, as under:—

I.—Those which, from their present combition and historical or archaelogical value, ought to be maintained in permanent good repair

11.—Those which it is now only possible or desirable to save from inther decay by such minor measures as the eradication of vegetation, the exclusion of water from the walls, and the like

III.—Those which, from their advanced stage of decay or comparative unimportance, it is impossible or unnecessary to preserve—

(a) in charge of Government, (b) in charge of private individual

Besides the monuments mentioned in the list there are many others lying scattered around Delhi, the history of which tennins to be unravelled, whilst explorations may reveal antiquities of surpassing interest. There is scarcely any spot of equal interest in India.

## Appendix P.

### Diwan-i-Am in the Fort, Delhi.

the Palace. A large open court lay beyond, from which extended, ri, ht and left noble double-storied bazaars. One of these led to the Delhi Gate, the other to the Haiyat Baksh Garden. Immediately in front stands the Nakar Khuna, or hand-house. Passing beneath its archway one reaches the Diwaniam, once surrounded by the second court of the Palace. Further towards the river front came a garden, and then, right and left, small courts connected by talleries, enclosing the private buildings of the Palace. Of these, the king Baths, the Pearl Mosque, the Saman Burl, the Diwan-i-Khas, and the Rang Mahal alone remain. Every other structure of importance has been swept away to make room for barracks.

PLATE No. 1.—Chromolithograph of the Mosaic Work at the back of the Marble Throne in the Diwan-i-Am (Double Plate).

PLATE No. 2.—Chromolithograph of the Mosaic of Orpheus (Single Plate).

PLATE No. 3.—Diagram showing the condition of the Mosaics after the mutiny (Single Plate).

2. The Diwan-i-Am, 170 feet 2 inches long by 68 feet wide, is supported by 60 columns of red sandstone, with cusped archways. The total height of the building is 36 feet 6 inches. The pavilion is open at three sides, the throne occupying the centre of the fourth or north side. The wall of the small mised apartment behind the throne is covered with mosaic in panels of black marble, surrounded by flural scrolls on white marble. This is the only example of black marble mosaic that I know of in India, and there can be little doubt its introduction is due to Austin de Bordeaux, who was in high favour with Shah Juhan. Bernier, the traveller, writing from Delhi in A.D. 1663, says the Frenchman designed the famous Peacock Throne formerly in the Diwani-Khas.

3. I learn from General Cunningham that before the mutiny, the mosaic here represented was in a neglected state, and stones had then been extracted, possibly by the native guards of the Palace. Greater damage was, however, some at the mutiny, when Captain Jones (afterwards Sir John Jones) comoved eleven of the black marble placques, four being large and seven small panels, which he had set in a marble-table top. He also extracted the figure of Orph is and sold all twelve pieces to the British Government for \$500. The position of the five larger pieces is shown in Plate 3, numbered 1 to V

4. I had careful full-size water-colour paintings made of these twelve placques (now with the Indian Act Collection at South Ken ington, which, with drawing of others made for Prince Soltykoff at Delhi before the mutiny one lent by General Cunningham and some obtained at Delhi, have enabled me to completely restore the original design. A full-size tracing was made of the wall,

showing-

1 -The mosaic as restored after the mutiny in painted plaster or lie.

II.—The marble placques that are still in the wall.

III —The missing marble placques and their position.

Colonel M. Hunter, who commanded the troops at Delhi, gave me great

assistance in procuring information.

5. The chromolithograph shows the original design, and the drawing representing Orpheus fiddling to the heasts is a faithful copy from the original mosaic. According to tradition Orpheus is a portrait of Austin de Bordeaux. who directed the design and work in A.D. 1648.

6. The actual drawing and rendering of the mosaics is no doubt due to native artists. The hirds and animals are common in India, and the foliated

patterns are similar to those of Jahangir's and Shah Jahan's period.

7. The painted portions are being gradually replaced by marble mosaic under the orders of the Punjab Government, and I venture to express the hope that the twelve plactues removed by Sir John Jones will be restored to their original places.

## Appendix Q.

## The Diwan-1-Khas in the Delhi Fort.

1. This handsome pavilion, overlooking the River Jumna on the east face of the Delhi Fort, is built of white marble, 240 feet long by 78 feet wide, and raised on a marble terrace, 44 feet high. On each of the four corners of the roof is a kiosque surmounted by a marble dome, which, like the cupolin of Shah Jahan's Agra palaces, was originally plated with copper gilt. The sheets of copper were taken by a Prize agent after the Delhi siege in 1857, on the plea of being movable property!

2. The interior decorations are very beautiful. Mr. Fergusson classes the

hall as " certainly the most highly ornamented of Shah Jahan's buildings."

3. The plan consists of a central apartment surrounded by an open corridor. The side of the hall overlooking the river is fitted with a mathle screen, now glazed. A water channel passes under the mathle floor in the centre of the hall. A flat roof with a coving of mathle rests on 32 piers spanned by cusped arches. The outline and proportions are in the best style of Mogul architecture. The lower portions of the piers are inlaid with Pietra Dura. The apper portions, as well as the arches, soffirs, spandrils, and coving of the ceilings, are covered with gilded patterns and tracery. The ceilings of both centre room and verandahs are of wood with mouldings dividing the surface into equal and similarly shaped loxenges, in the centre of which are red roses highly gift.

4. Franklin, who visited Delhi in 1793, says of this pavilion: "The ceiling is of wood, painted red, and richly decorated with gold; it was formerly entrusted with a rich silver foliage, inland with gold, at an expense of 30 lakks of rupees. The Mahrattas took it down, and on sending it to the mint to be coined, obtained 28 lakks. On a compartment over the cornice are these lines in the Fersian character in letters of gold: 'If there is a paradise on earth it is this, 'tis this.' The roof is surmounted at the angles with four pavilions,

the ornaments of brass on the cupolas being richly gilt."

# PLATE No. 1.—Ceiling of the Diwan-i-Khas (Chromolithograph—Double Plate).

5. The central apartment of the Diwan-i-Khas had its ceiling re-painted in 1876, in preparation for the visit of His Royal Highness the Prince of Wales. The renewal was hadly ilone, the moulded fretwork being re-painted in black, red, and gold, instead of the original pattern, and the central rose converted into a sort of starved starfish, the effect being extremely harsh and glaring, into a sort of starved starfish, the effect being extremely harsh and glaring. Fortunately the outer corridor has the design of its celling intact. The woodwork is somewhat decayed, the colours faded, but the delicacy of the pattern is in harmony with the decoration of the marble portions of the building and rethe same style.

6. From what is known of Aurangzib's architecture it is unlikely he put up or decorated the ceiling as it now is. His successors allowed buildings to fail into neglect, and both Nadir Shah and the Mahratras were destroyers, not repairers. Putting other evidence aside, the appearance of the ceiling affords pretty conclusive grounds for assuming it to be of Shah Jahan's time. This consideration should have weight in rendering the roof secure. It is found that the beams of the ceiling have got decayed multhe superincumbent concrete probably reats as a solid mass. I think my repairs should leave the ceiling intact. To the majority of visitors the Diwan-s-khas is the chief beauty of Delhi.

## Appendix R.

#### Tomo of Itmad-ud-Dowlah, Agra.

The tomb of Itmad-ud-dowlali is not only one of the finest buildings at Agra, but, after Akbar's tomb at Sikandra, is the second Agra building, in which Pietra Dura mosaic plays an important part. It was completed in A.12 1626 by Nur Mahal, daughter of Itmad-ud-dowlah, and wife of the Emperor Jahangir.

z Mr. Keene states that Itmad-ud-dowlah died in A.D. 1622, and that a garden house of his had probably existed during his lifetime on the site of the

tumb

3. The Mausoleum is 60 feet square, faced externally with white marble covered with mosaics of geometrical tessers and floral patterns. The outer walled outlosure, 540 feet long on each side, contains the garden recently put in good order.

# PLATES Nos. 1 to 3.—Details of Painted Decoration (Chromo'ithographs—Single Plates).

a In the centre of the troot, towards the River Jumua, is a red sandstone building, 67 feet long, formerly used by Europeans, but now freed of the doors and windows in creed to make the pavilion habitable. It is in the ceilings of this structure that the painted freeco decorations are to be seen. The whitewash which covered them has been removed by the Government of North-West Provinces but the patterns might with advantage be re-outlined and revived in parts.

3. In a report flated May 1880, I submitted a recommendation that the beautiful paintings of the interior of the tunit should also be cleaned and

revived

6. Painted decorations were used by ludian architects from the commencement of the Christian era, but their perishable nature and the rough treatment of the buildings, particularly by cooking fires, have left very few examples in a fair state of preservation.

7. Commencing from the first century A.D., we know of the Buddhist sculptures found in the Yusufzai district having been coloured and gilled. I have myself found plaster figures on which the colour was quite fresh, and stone

carvings with r mains of gold leaf on their surfaces.

8. The well-known caves at Ajanta were most elaborately painted with Buddlist seen. The earlier caves are of this date. The paintings copied first by Major Gill, and latterly under the direction of Mr. Griffiths, of the Bombay School of Art, have served as patterns for the decoration of the new Bomb y pott ry

9 There is a lack of examples of architectural painted decoration from the Apanta period down to the 13th century, when the Muhammadans built the Albambra in Spain and adorned it with highly moulded and coloured plaster arabesques

to. The early Moslem Emperors of Dellii built tombs and mosques of great solidity, and carved the decoration on the stone; but painting was also used, as may be seen in portions of the tomb of Shams-ud-din (A.D. 1236) at the Kutub.

11. The beautifully-illuminated korans, dating from the 14th century A.D.,

found at Cairo, show how the love of coloured arabesque had developed.

12 Coloured frescus occur in Bokhara baildings (of Tamerlane's reign, before 1405 A.D.) and are a mixture of Indian Multammadan, Chinese, Tartar, and Russian ornament.

13. The following are some of the principal examples of mediaval Indian

paintings -

I.—Interior of the dome of Shah Alam's tomb at Ahmedabad, 1475 A.D.

11 -Walls in Man Singh's Palace at Gwallor, 1507 A.D.

IV.—Beautiful Mehrab, or Chapel, in the Jama Masjid, Bijapur, 1557

V.—Archway to the great Mosque at Fatchpur Sikri, 1571 A.D. (This has been recently restored by the Government of the North-Western Provinces. Abal Faul tells us that Akhar imported painters from Tabris and Shiraz, in Persia.)

VI.—Vestibule of Akbar's tomb, Sikandra; also the archway of the west gateway, 1613 A.D. (These have been partially restored by the

Government of the North-Western Provinces.)

VII .- Trimal Nayakkun's Palace and Temples at Madura, lu Madras,

1623 A.D.

VIII - Frescos in Wazir Khan's Mosque at Lahore, 1624 A.D. (These have been damaged by clumsy repairs done by the native custodians.)

IX.—Interior of Itmad-ud-dowlah's fomb at Agra, 1628 A.D. X.—Corridors of Jahangir's tomb at Lahore, 1628 A.D. XI.—Ceiling of the Khas Mahal, Agra Fort, 1630 A.D.

XII.—Shah Jahan's painted ceilings in the Shahilmar Gardens, Kashmir, 1640 A.D. (Those are mentioned by Sir Thomas Roe in 1993.)

#### Great Temple to Siva and his Consort at Madura.

(An elaborate survey was made by one of this temple, but has not yet been published.)

PLATE I.—View of the Mutte Goparam (Heliogravure).

PLATE II.—View of the Mutarli Mandapam (Heliogravure).

PLATE III.—View of the Vlavasanta Mandapam (Heliogravure).

PLATE IV.—Temple Jewels (Chromolithograph).

Madura is one of the most interesting places in India, the peculiarities of Dravidian art being more marked and more grotesquely elaborate here than in any other southern city. The Great Hinda Pagoda, with its picturesque gateways and pillared halls, produces a grand effect, whilst the deeply cut sculptures thrown into strong relief by hilliant sunlight are unsurpassed for variety and elaboration. This cannot fail to be the impression produced on any attentive spectator. The temple buildings are, moreover, not deserted like so many Indian shrines, but at all hours thronged with priests, worshippers, buyers and sellers, in this respect rivalling the busy religious spectacles which rapidly succeed each other at Benares. The activity of Hinduism both in its religious and artistic traditions is of the first interest at Madura, whilst in the civil architecture of the city one may observe an unrestrained use and appreciation of Muhammadau forms rendered in the paculiar manner of southern artisans.

2. A plan of Madura, dated 1688 A.D., published in Les Monuments Auciens et Modernes de L'Hindonstan by L. Langlès (Paris, 1821), shows the city to have been laid out with regularity; the central square containing the pagoda and palace buildings, shut in by double walls, was enclosed by a most, again surtounded by streets, the whole covering a square area, to walk round which, the

author says, took a good two hours.

3. The invasion of Southern India in 1310 A.D. by Malik Kafur caused the overthrow of the original pagoda, built probably some centuries before Christ. The existing edifices, forming the central portion of the temple, are said to date from 1520 Å.D., but the surrounding and more magnificent buildings are mostly of Trimal Nayakkan's time (1623—1659 A.D.). Some of the invertitions on the columns and walls are however older. One on the East Gopuram (Sundara Pandiya Gopuram) is dated 1522 A.D.; and in the same building is an inscription recording the gift of lands to the temple in the tenth year of the reign of "Sundara Pandiya Deva" (probably Rajendra Chola, who reigned up to 1113 A.D.).

The following inscriptions were noted:-

4. The two central shrines are dedicated to Siva, called "Sundareshuar," and "Minakshi" the fish-eyed goddess, the consort of Siva. The ceremonies connected with these gods furnish constant occasions for festivals within the walls of the temple, as well as processions outside in the city.

5. Photographs were taken of the most remarkable jewels used for the gods. The oldest is a pendant, studied with precious stones, presented by Sundara Pandiyan (which, if he was a Pandyan king, must have been before 1310 A.D.).

Trimal Navakkan gave a head turban for the god. (See Plate No. 4)

6. The grotesque silver gilt vehicles for the god and goddess to ride in procession represent a lion, a swan, a human-hraded bird, and a Vali or griffin, but are modern goldsmiths' work. All the other ornanients appear to be modern, and there is nothing on record to show when they were given. The designs of jewels at Rameshvaram and Madura are admirable, particularly products of double-headed garddas or birds with outstretched wings in solid gold studded with precious stones. These resemble some beautiful Egyptian jewels of gold incrusted with enamel and stones (figured at page 833 of Histoire de L'art dans L'antiquite, by Perrot and Chipiez—Paris Hachette & Co., 1882), which represent birds with outspread wings holding in their talons the emblems of eternity.

7. There is no means of knowing what the plans of the original temples at Madura were like. They may have been isolated shrines or with a single enclosure like the "Alaiva," or they may have been buildings with more than one enclosure like the Egyptian temples; but as rebuilt, onlarged and added to by Trimal Nayakkan, they possess three principal enclosures, and it appears from the unfinished Rayai Goparam that a fourth was in contemplation. All are for the service of the temple, and not as fortifications such as may be the

last three enclosures at Srirangam.

8. The pagoda is very wealthy, has an undowment from Government, and receives frequent gifts of great value. Considerable sums are spout in repairs, and in painting and whitewashing the carved masonry of the Goparams and balls.

g. The following describes those portions of the temple to which unhelievers have access, and which for the most part are under secular government and used for everyday purposes. No notice has been taken of the condition

of the actual sanctuaries, as this is a matter which alone concerns the temple

to. The principal entrance is from the east through the Sundara Pandya Goparam, measuring to a leet by \$8 feet in plan, the hubbling has been reputriful and the exterior figures newly painted, the effect being quaint and pleasant at a distance. The steps leading down from the street are in disrepair. On the top step is an inscription which is worn in places. On the side walk of the passage are several other inscriptions. An inscription on the sill ston is worn. The wooden doorway of the Emparam is in disrepoir. It is richly broadmined with carvings. The chamber on the right has been closed up by a roughly built wall with a small doorway. Rude steps have been made leading up to the left chamber, in which is the stairs of the passage, which are used as There are two small nicks on the inner side of the passage, which are used as

receptacles for rubbish. The stone flooring of the passage is worn.

It On leaving the Sundara Pandya Guparam the Viavaganta Rayar Mandapam is reached. See Plate No. III. Four of the columns on either side of the continue that the cast entrance have life-size sculptural figures, one alightly mutilated. The of these have been photographed. On the south side of the court a store team has cracked between two columns, and an additional stone pillar has been placed as a upport. The roof shows is no of leakage on the cast ide tween the outer and could row of column, also on the north side. All the column and of high averbeen whitewashed. A portion of the columnary to the west has been built up to form mortar pits for the recent plaster repairs. Detail drawings were made of three columns and of the plinth of a fourth.

Mandapam. The entrance steps are in disrepsir, and the in cription on the top at p is nearly defaced. The floor of the court is in a very bad tate. The roof applies to be rain-proof, but a number of openings have been made by ter oving ceiling alabs to a limit light, and the rain pours in at these places and do damage. The whole of the ceilings and columns have been whitewashed their lower portions are very dirty. The first two rows of columns have sculptured figure of considerable spirit, and are, with the exception of a few chips in good preservation. Detail drawings were made of ten columns and of the climbs of two others.

13. South of the Viavasanta Rayar Mandapam is the Sher Vagarar Mandapam, the flooring of which is in great disrepair and very dirty. The lower particips of the columns are whitewashed, and a shed is built against the

north nide.

14. A second approach to the temple enclusive from the east is thin ighthe Ashta Sakti Mundapam, a building with a great deal of grot five executy and color of decoration, used as hops. The floor of the passage is in disrepair the ceiling and colorms are painted; but the lower portions of the latter are

in a very dirty condition, being envered with greate.

15. Paring on, the Minakshi Naikar Mandapam I reached. The fluoring is were, the read keeps out rain, but the criling i covered with dirt and robovel. The ceiling over the main passage is painted, and the apporting columns are colored yellow, but lower portions to a height of 5 feet are in very dirty condition. The out raisless of this court recursed as elephant while and very dirty. The lines archway for lamps in front of the Chitra Contained in a neglected state, and aimost hulden by a dirty wooden scaffold.

A bod black tone has an inscription in good condition. There are also two other two sparons in the passage, both it arry oblite-ated.

16. The Chitra Goparam has its flooring to disrepair and walls and ceiling covered with colwebs dust, and lamphlack.

17. The Mudfi Pillai Mandapam b yand is much neglected, with whitewa bed walls and columns, sculptures covered with oil and colowells, and the flooring

in disrepair. There is an in a ciption on the June III No. 17.

18. The Chitra Mandapam is a colonnade round the north, south and cost sides of the Potra Mara Culum tank (170 feet by 112 feet). The flooring has been recently repaired, and is in good order. The outer cow of column are whitewa he i, but the inner culumn and ceilings are brilliantly coloure ! The wall of the north side is covered with frescos representing the Sive Furances, and two panels have been photographed. The west side of the tank is shut in by the Kili Kati Mandapain, the flooring of which has been renewed recently. The ceiling is in a dirty condition, and the old paintings discoluted. The sculptures are in good preservation but invered with gire and dirt. The upper parts of the columns are painted. The east wall abuttle, Minakshi's temple to the west is covered with inscriptions but some new stone have created gaps in the lines which otherwise seem c pable of being read, aithough at present covered with whitewash.

19 The Munarli Mandapant, which adjoins the Kili Kati Court, were to be of recent construction, and is in good order. The cellings and upper parts of columns are brilliantly painted. (See Plate No Il Heliogravure). At the west on or this Mandapam is a canupy of black stone supported on columns, and mar to it a decreasy leading into a garden containing the Mandapam of Jawandi I husean. which is in so minous a condition as to be only a lumber store. Passing from the Kili Kati Mandapam to the Sundaridiuar Suumi temple, om reach the Nadkat Coparam ft is in lair order, but dirty, 'The wooden door is cirhly

carved, and a detail drawing was made

20. The temple of Sumlarishmar Suami is on all four sides surrounded by a colounade, the flooring e which is in di repair and strewn with debris. Along the outhern sides the columns are black with the and anoke, and the ceiling i drity and hausted by bats. The back wall of the clusters has some inscriptime, which, although here and there damaged appear to be tolerably clair On the west side the flooring is worn, columns and onlings whitewashed, but the root is near I would

21. The Palak Goparam, which is an exit to the west, has been repaired and nainted outsuic, but the ground floor is very dirty and neglected. The mairca

to the upper tories is closed up.

22. The colounade on the northern side of the temple is whitewashed, its flouring is tient, although worn. The wall surrounding the enclosure shows everal cracks on the south side and the south-we t corner has somewhat - 1 and cracked. There are a veral in criptions on this wall, as also in our stones in the flooring. Some inscrined paving stones removed from the inter collosure are alrewn almut

23. The Mandapannigam Mandapann is at the north-cast corner of the Sundara Islamra temple envioure Its flooring to in disceptor, its column whiteamhod; their capitals and the intermediate collings blacked by mole. The st po leading up into the court have been recently re-constructed. The

Mandapam is used as a lumber dore.

24. The Sundarishust of Kambian Mandapam is an elaborate structure, some of the pillars of which have been detailed. The flooring has been received lately also a number of the columns. The carling has been repaired, and the lannade at the south-east corner has been closed to form a store-room for the various emblematic vehicles used in ceremonies. Many of these vehicles are of

silver, and the best have been photographed.

25. The Goparanaigam Goparam is the chief entrance to the Kambtari Mandapana. The flooring has lately been renewed on the inner side, but the outer portion is old and worn. The wooden doorway has been roughly repaired. The exterior of the Goparam has been repaired and painted, but the interior is black with amoke and dirt. The interior staircase is ruined. There are a few inscriptions in the passage.

36. The southern tower, called the Jawandi-Lingam Chatti Goparam, has been repaired and re-painted. The outer outrance opening has been narrowed and provided with a small door. The flooring is worn; the side wall and ceiling whitewashed; the stone pilasters painted yellow. The recess on the right is closed up for storing grain. That on the left contains the staircase to the top.

There are two inscriptions in the passage.

27 An inner street passes round the two great temple enclosures on the south, west, and north. Opposite the southern tower and on the other side of the south street is a small porch and door now blocked up. Turning to the west the Tahsildar's office is passed. It has been formed by building walls between the columns, and the rooms are kept in a very dirty condition. Further we t and at the corner is the shrine of Ganpati, the Mandapam of which is in a dirty and neglected condition, the floor being strewn with rubbish.

28 The colonnaile along the outer wall of the west street is used for cattle. The floors are broken up; the roof leaky and dangerous and sunken in several

places.

29. Buth the Kadaka and Palaka Goperams are closed up and no longer used as entrances to the two sanctuaries. They have been repaired and re-paint-

ed outside.

The outer entrance of the western or Prakarama Pandya Goparam has been narrowed for a small doorway. The passage is in a very dirty state, being blackened by smoke and dust. The floor of the passage is in diarepair. The staircases leading to the upper stories have been repaired and their walls plastered. The exterior of the tower is in a ruined condition, but repairs are contemplated, and a scaffold for the purpose has been creeted. The general construction of the Goparam has been demonstrated by careful drawings. The colonnade between the Goparam and the north-west corner is in fair repair and used as dwellings. The colonnade between the north-west corner of the outer enclosure and the Mutte Goparam is in use as a school, and is in fair condition.

31. The northern tower or Mutte Goparam (see Flate No. 1) appears to be unfinished. It is in disrepair, its stalreases and upper stories are dirty and

ruinous

32. Opposite this Goparam is the Chinna Mutte Goparam, which has been

recently repaired and re-painted.

33. The sixteen-pillar Mandapam, which is between the thousand-pillar

Mandapam and the enclosure of the two principal temples, is in fair condition, but the columns and ceilings are whitewashed.

34. The Suhiar Mandapam abuts the east wall of the Sundarishuar en-

closure. It is in fair condition, but the walls are whitewashed.

35. Next to this, to the south, is the Kaliana Mandapam, or marriage hall. The floor is in dissepair; the ceiling and columns whitewashed. It was originally an open pavilion, but now is open on the east only. On the two side walls are some curious drawings. There is an inscription on black stone.

36 The columnade along the south outer wall and to the east of the southern

tower is In a very dirty and neglected state. The roof is dangerous.

37. Trimal Nayakkans Mandapam, measuring 340 feet by 127 feet, is on the east of the great temple enclosure and across the street. It is also called the Pada Mandapani. Two of the columns have been illustrated in detail. The flooring is firm but worn. The columns and ceiling are whitewashed. The lower portions of the columns are very dirty, and most of the sculptured figures painted. The roof is sound, but the parapet walls over the east and west ends are in ruins. The side walls to the north and south are bare, no parapets having been erected. A portion of the stone caving at the north-west corner is damaged. The sculptured horses on the west side have been slightly mutilated. The tatties and screens put up to enclose the hall are a disgrace to the place. The pavement and colonnade north and south of the building are extremely neglected and dirty, and used as urinals by the natives. There are several stones bearing inscriptions, but they do not appear to be in their original positions.

38. The Rayar Gaparam, measuring 172 feet by 112 feet, is finished to the

first story only. The passage is dirty and covered by rubbish of all sorta. 39. Very little attention seems to be paid to the sanitary condition of the temple. Every recess and corner is taken advantage of to be used as a latrine. The only places regularly swept are where processions pass, or where worship

is conducted.

40. There are a number of stones bearing inscriptions, the positions of which are indicated by numbers on the plan which I had made of the temple. Many of these seem to be detached from their original positions, and a number of inscribed atones have been brought from the interior enclosures to be used for repairs. This will naturally destroy a good deal of historical evidence which may be of importance.

## Appendix V.

Great Temple to Vishnu on the Srivangam Island near Trichinopoly.

t The extest known examples of Dravidian architecture are at Mahasallipur (Seven Pagodas), which, with one exception (the Alaiva or shore temple), date from A.D. 650 to 700, and are cut out of the solid rock, being olated tractures with no enclosures. Mr. Fergusson calls these Raths "the petrilections of the last forms of fluidhist architecture and of the first forms of that I the Dravidians". The oblong Raths became Gopurous or gates, the more Raths Vinannalis or sanctuaries, and both continued to be copied, together with their details, to a late period. The rock-cut caves, with their more little pill of appear to have been the precursors of the many pillared halls or Mandapas of Southern India, and are currously like the rock-cut tombs and temples of Egypt and Nuhus.

The Maiva temple at Mahavalipur illustrates the growth of the style and is a tructural temple, probably dating A.D. Soo to ooo, the sanctuary being arranded by an outer wall, whilst an enclosure buried in the sand has recently

been discovered to the west of the hulding.

a Mr bergusson ha touched on the similarities between the Egyptian

and Deavillan Temple at the ay-

the first the Gopern, both in form and purpose, resemble the pylone of the print temple. The courts with pilars and closivers are common to both and very only in tree eman and extent. The great Mandaput and balls of these columns reduced the Hyp tyle balls, both in purpose and effect, with alm it must accuracy. The collary control tower or Vinanals over the sanctuary in Egypt is only companion by test tower in trada (Tanjove). Their mode of agency also, and the amount of labour lower half and the mode of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the pylone of the pylo

4. While t questioning the acculent of this resemblance, Mr. Fergusson coniders the interval of time so great as to negative the idea that the features of Dray do n temples were imported from Egypt but, looking to the intercourse between the two countries certainly existing in remote ages, he allows that

seed may have been sown which fractified long siterwards.

5. Beyond mere name, is there any origin common to the Egyptian king and conqueror Rhamses and to the fudian ged and hero Rama? We know that the temple of the former—the Ramession at Thebes—was laid out on principles followed at Rame hyaram, the temple of Rama in the extreme south of Madras. Again, the resemblance between the engle-headed Garmia or vehicle and companion of Vishim and the hird-headed figures of Egypt, Horus, and Thot, also between the grotesque winged from of Nincoud in Assyria, and the monster Yalis or griffins of the Madras porches, seems to indicate the origin of some of the heatures of the Vishim faith.

6. The designs of the temple jewel at Ramushvaram and Madura suggest attique origin, particularly pend ats of single and double-headed Garuda or lind with outstretched wings, in solid gold studded with precious tones. These resemble some beautiful Egyptian jewel of gold increased with channel and stones figured at 1 ge 833 to Histoire de L'art dans L'antiquite, by Perrot al Chiple (Paris Liathette & Co., 1892), which represent blid with

cutspread wings holding in their falons the emblems of eternity.

## PLATE No. 1.-General Plan of the Srirangam Temple-(Double Plate).

7. The great temple on the Seirangam Island, formed by the Kaveri and Kolerin rivers, is over 4 miles north of the Trichinapoly civil station. A plan of A.D. 1688, at page 100 of Vol. I, Les Monuments Anciens et Modrenes del. Hindonstan, by Monsieur L. Langles (Paris, 1821), how a pageda on the preont site, but nothing to indicate the dispultion of the buildings, or whether the present enclosure walls then existed. Mr Fergusson states that all the main parts of the tumple belong to the first half of the 15th century, and this is probably correct in respect of the super-tructures of the pyramid gates which are of brick, plast red in a very florid style. But some of the stone basement if these huge tructures have a more ancient look. The campant horses in Plates Nos. 3 and 9 bear a resemblance to those in the Vellore temple (A.D. 1350) and to those at the entrance to Trimal Nayakkan's choultry at Madura (A.I). 1645). A comparison of some of the details in the third and fourth enclosure (see Plate No. 6, Column H. and Plate No. 10 Column F) with those in the rock-cut temples and caves at Mahavallipur (650-700 A.D.) show how ancient forms were reproduced in later and more elaborate buildings.

8. Viswanatha Nayakkan, one of the hings of Madura, took possession of Prichinopoly about A D. 1559, and built part of the Srirangam temple, but Mr. Lewis Moore tells as in his Trichinopoly Manual that In certainly did not build the oldest portions. The Tamil manuscripts state that Trimal Nayakkan (A.D. 1823-1039) constructed of Ravar Copurans, of which some were in Scien-Vijava Ranga Choka (A.D. 1705-1731), the last of the Nayakkans, uppear to have largely endowed the temple, but shortly after both the pagestaof Surangam and Jambuishuar ware occupied by the troops of Chanda Saliib and the French until the English and their Mahraits affice under Lawrence. Clive, and Monakji obliged them to capitulate. Both temples continued to be used as encampments during the wars between the English and French up to the end of the 18th century when Trichinopoly was transferred to the British

Government.

9. The late Dr. Burnell held the opinion that all the great Madras temples to Vishnu were crected in the 12th and 13th centuries, and that Krishnaraya (1509-1530 A.D.) built the great Gopurams at Conjeveram, Chillamharam, and Srirangam, to form fortifications to protect the shrines from loreign invaders. The masonry of the Surangam buildings requires to be cleaned of plaster and whitewash before a perfect search can be made for inscriptions to eincidate history.

The following inscriptions were taken note of by my surveyors:-

۰			O									
	int (		n and	unry -	5	marimi + do.	क ती वंगः, वं			,	1	5 7 10
	gril	do		100	7110	dis.	on pavement		•		21	111

		elite			4	th th	on the neath	French	am		-	1 2
		tita.			4	do,	assetti Cope					4
	2311								Tor	31		108

10. Due probably to its gradual development around the original central shrine, there is a great want of comparines in the general design. It is now a walled town with a number of spires and fanes dotted irregularly about; and, as Mr. Fergusson remarks, the gateways lose half their dignity from their positions, the bathos of their decreasing in size and elaboration, as they approach the sanctuary, being a mistake which nothing can redeem. On the other hand, there is a great picturesqueness in the whole viewed from a height or distance, and much to admire in the designs and details of the individual structures.

11. I was told that the income amounts to Rs. 60,000 a year, but the annual festivals lasting 20 days, and to which great crowds assemble from all parts, meet yield a good deal in gifts and offerings. The three outer enclosures of the temple occupied by houses have since 1871 come under the Municipal Act of that year, and the Commissioners, with receipts amounting annually to over Rs. 20,000, have the means of keeping some of the most important structures in proper condition. I am indebted to Mr. Sewell, Collector of Trichinopoly, for a detailed list of all the more important temple jewels used to adorn the good at festivals. Photographs were procured by me of the best examples. According to the temple records, Vijaya Ranga Choka Nayakkan (A.D. 1705—1731) presented some of the earliest specimens, comprising valuable vessels of solid gold and handsome suits for the god, of gold armour studded with precious stones. His Royal Highness the Prince of Wales in 1876 gave a golden alver.

12. The outer or eighth courf covers a very extensive area, measuring 2,520 feet by 2.865 feet. The four walls are in tair condition. The northern Gopuram at A on the general plan (Plate No. 1) is built up to a height of 4 feet only, and dwelling-houses are erected over it. The eastern tower at B is built to a height of 12 feet. The entrance door is in disrepair. The southern gate at C is complete to the first story and known as the Rayar Gopuram. The structure is overgrown with vegetation which should be removed, and the dear which is dilapidated should be repaired. The western tower at D has

13. The seventh court is enclosed on all four sides by walls in disrepair, portions of the parapet and upper masonry having fallen. The exterior of the northern Gopuram at E is in disrepair, also the floor of the ground story. The southern tower or Talayari Gopuram at G is overgrown with vegetation, and its exterior in bud condition, the plaster having fallen in several places. The flooring of the passage is in had order, and the ceiling with its paintings dis-

figured with illet. The western Gopuram at H has its exterior in illsrepair, but the interior is in fair order; the doors require looking to.

14. The walls of the sixth enclosure are in a very rainous condition, the upper portions crambling away and overgrown with creepers. The northern tower at I is overgrown and in a state of rain. The interior is in fair order, but the ceiling of the ground floor has paintings soiled by dirt. The eastern tower at K is known as the Katte Goparam. The exterior is in fair order, but portions of the plaster in disrepair. The interior of the Goparam is in good order. The southern or Nanmohan Goparam at L is in a rained condition, and the exterior full of weeds. The interior is in fair order, but the ceiling freeces of the ground floor dirty. The western or Sakkilian Kottavasal Goparam at M is in disrepair, and portions of the brickwork fallen.

15. The walls enclosing the fifth court are in fair condition. The northern or Nachiar Sanadi Gopuram at N is in fair order, but the door out of repair. The eastern or Vaille Gopuram at O is in very good condition, but a portion of the stone coving has been broken off outside. The exterior of the southern or Kurat Alwar Gopuram at P is in great disrepair, but the interior is in fair

order. The painted ceilings of the ground floor are very dirty. There is no

west in tower to the fifth court.

to. The walls round the fourth court are in good order. The northern tower at Q is in great disrepair, the plaster having fullen as well as portions The southern tower at R is in disrepair, and young trees of the musonry. moted on the top. There are but two Gopurams to the fourth court, beyond which gone but Hindus may penetrate.

17 The walls and buildings coloured red on the plan, Plate No. 1, enclose the temple proper. Between the fifth, sixth, seventh, and eighth enclosures,

are streets of houses, coloured grey on the plan.

18. The principal halls or Mandapants are between the fourth and lifth enclosures. The thousand-pillar Mandapam at the north-east corner, the Salahgiri Rao Mandapam on the east side, and the Rangvilasam Gopuram to the suth.

PLATE No. 2.-Plan and Section of the Thousand-pillar Mandapam-(Single Plate).

PLATE No. 4.-Pillar in the Thousand-pillar Mandapam, marked L on the Plans-(Single Plate).

PLATE No. 8.-Pillars in the Thousand-pillar Mandapam, marked K and M on the Plan-(Single Plate).

19. The so-called thousand-pillar Mandapam is in fair urder, but portions of the floor near the south entrance and at the north-east corner are broken up. The ceiling and columns have been whitewashed, and some of the latter coloured in red and yellow stripes. The carved stone should be laid bare. The actual number of pillars in the hall is 952. The building runs almost due north and south and measures 508 feet by 153 feet. It has a series of three terraces rising one above the other to the north. Details of there of the columns are shown in Plate No. 4. Column L. and Plate No. 8. Columns K and M. Their simple outline points to the probable early date of the ball, which from its position appears to be an integral part of the lifth enclosure.

PLATE No. 3.-Pillar in the Sashgiri Mandapam, marked B on Plan, Pinte No. 1-(Single Plate).

PLATE No. 4-Pillar in the Sashgiri Mandapam, marked A on Plan, Plate No. 1-(Single Plate).

PLATE No. 9.-Carved Pillars in the Sashgirl Mandapam, from a Photograph reproduced in Heliogravure-(Single Plate).

20 The Sushgiri Mandapam is one of the most elaborately carried colonnudes in the temple, and, Judging from the way in which it is placed, seems to be later than the ulth court. Knowing that Trimal Navakkan had a share in the additions to the Sriningam temple, the probability of his having built this Mandapam is increased by the resemblence of the rampant horses in Plates Nos. 3 and 9 to those in his choultry at Madura. The carrings are much spoilt by streaks of red and yellow paint. The floor of the building is in disrepair, but the rool and ceiling in fair order. One of the columns has been damaged, and the figures of a tiger and a man He broken at the base.

PLATE No. 5.—Pillar in the Rangvilasam Mandapam, marked C on Plan, Plate No. 1—(Single Plate).

PLATE No. 6.—Pillar in the Rangvillasam Mandapam, marked E on Plan, Plate 1—(Single Plate).

21. This hall used a a council room for the temple, also appears to lave been added after the fifth rourt was built. It is in good condition, but the peaper wall is in disrepair. Details of two of the columns marked ( and E on the plan, Plate No. 1, and ngured in Plates Nos. 3 and 6, show considerable retinement and delicacy in design suggestive alike to those who work in stone or metal.

PLATE No. 6.—Pillar in a Mandapam in the northern portion of the fourth enclosure, marked H on Plan, Plate 1—(Single Plate).

PLATE No. 10.—Details of a Pillar marked F, and a Door marked J, in the fourth enclosure. See Plan, Plate 1—(Single Plate).

22. Visitors are not allowed in the fourth suclosure, but my Hindu surveyors made a plan or it with the courts beyond, and obtained the detail, which form the subjects of the illustrations. The column marked H in Plate No. 6 is from twelve-pillated porch in the northern part, and very similar or design and propose to the pillars in the Raths at Malavallipur (650—700 Å.D.). It appearance suggests an early date. The column marked F in Plat. No. 10 is from a four-pillared porch to the south of the third enclosure. The door J in Plate No. 10 is from the Garmia temple between the two south Gopurams of the third and fourth enclosures. Most of the better planned and more celebrated Ma iras temples have doors of this description handsomely carved in wood.

PLATE No. 5.—Pillar from a Mandapam in the third enclosure, marked G on Plan, Plate i—(Single Plate).

PLATE No. 7.—Four-pillar Porch in the third enclosure. See D on Plan, Plate 1—(Single Plate).

23. An elegant little porch at the north-west corner of the third court is shown in Plate No. 7. The superstructure above the cornice or Chijjais of wood and probably a repair, the lower parts being of stone. The simplicity of the organization of the earlier period of Dravidian art. The Colomic of from a half in the south-cost corner of the third cuclesure resembles some of the columns in the Vellore Fort (A. D. 1350).

24. The principal brine, in the centre of the building, is dedicated to Vi hon, called Rangnath Swami. It has a modern gilt dome. The goddess has a temple in the north-west curver of the fitth cuclesure called "Rangnalki." Besultinese there are numerous small shrines in the various enclosures dedicated to

minor deitirs and one to Ganesh

# Appendix W.

# Temple to Sun called Jumbuishnar on the Sevangam Island. Trichinggoly.

t. In a note on the Srirangam Temple, I have point I out how we have to look to the Raths at Mahavallipur for the earliest known Indian exactly level Dravillian rehitecture (650-700 VIL). Mr. Fergus on ptly calls them the petrilactions of the last forms of Buddhist architecture and of the first forms of the Dravidians. The olilong Rath supplied models for the great gates, the square Raths models for the Vimanas or suprimities of the temples. The rocks cut cases, with their mounithic pillars, appear to have been the precur or of the many-pillared hall or Ma dapas and remble the rock-cut tombs and temple of Egypt and Nulna.

2 The temple of Southern links with their lofty gates and numero, encloing wall have whether by accident or through the connection between the two countries in remote age a resublance to the temples of Egypt. The Gopuram resemble the Pylo of the Egyptian temples the courts with pillars and the service common to both, and very unit it in arrangement and extent. The gr at thousan i-jullar Mandapams reproduce the Hypoxyle ball, and the encloer of the sametuary within numerou barriers was in both the very essent

J. The temple to Siva on the Srirangam land near Triclinopoly, known as "Jamhuishuar," is maller than the Great Temple to Vishtu at the same place; but with the greater interest of earlier date it armses it also in 1, 2019 and architectural dignity. There are many inscriptions on its walls, one daths A.D 1481-82 but if, as Dr. Burnell says all the great temples to Siva in Southrn India were built in the 11th entury A.D. we may expect something earlier to be remorded among the inscriptions and yet read or yet to be discovered.

The following were noted by my sarrevors:-

Since only—3 on the flow, 2 on walls, tool .  and Court—2 on the flow 7 on will be properly  —10 in the flow 22 on with trial  4th —2 on the flow of 1 rapid in Lakalim  5th — Name  6th —1 on the Gamman to the work	•			Ī	5
	7117	IAL	٠	•	47

4 Mr. Lewis Moore, in his Manual of the Trichlumpoly District, ->> the Jachuchung tempie i not a rich in the had in A.D 1750 an embowment of 64 silling but in 18 a own I only 15. In 1 51 an annual noney allowance of Re. 9.15 was given to the pageoda in ficu of the land, and this i in, suffice at to keep the buildings in good order, a paid of ty year to the trusteen.

# PLATE No. 1-General Plan of the Jambuishnar Temple.-(Double Plate).

s. There are in courts to the length non-but Handas are admitted to the 3rd, 4th, 5th, and 6th. The walls of the first court are in disrepair and over. grown with vegetation. The principal cateance is on the west side by the To pura D the exterior of which is in the repair but the interior in good order excepting the floor. There is here a stone with an inscription. The northern gate at A is built up to the first story only. The eastern tower at B is finished to a height of only to feet; both are in good coudition. The southern Gopuram at C is built up to the first floor; the interior is in good order, but the floor covered with earth; the carved wooden doors are in disrepair. The first enclosure measures 2,420 feet by 1,490 feet. The se-called thousandpillar Mandapam with its tank is in this court, and has to be traversed on entering from the west.

6. The second court measures 1,370 feet by 530 feet. It has only two entrances. The gate at K on the west is overgrown with vegetation, and the exterior is in disrepair. The interior is in fair order, but the door dilapidated. The Gopuram to the east at E is in fair condition, but overgrown with vegeta-

7. The remaining Gopurame at F, G, H, and J, are in a ruinous state, access is however, denied to any but Hindus. The portions of the building coloured brown are used as dwellings or for secular purposes: the temples and accessories are coloured red, and their gardens green.

PLATE No. 2—Plan and Section of the Thousand-Pillar Mandapam.

PLATE No. 3.—Column marked G on the Plan.

PLATE No. 4.—Columns marked E and F on the Plan.

8. The thousand-pillar Mandapain with its tank, called the Surya Tiratham, measures 525 feet long by 130 feet wide. The tank is said to be fed by a perpetual spring, but I am unable to verify this. The total number of columns in the hall is 707, and round the tank 132, making 839 in all. The Mandapam runs nearly due north and south, and has tour sets of floors rising one above the other to the north. The columns at I and G are claborate in design, the scrolls of foliation carved in panels being specially effective. Column is is plainer and more primitive in outline. The floors of the building are in bad order; the ceilings, however, in fair condition; but both ceilings and sculptured columns are whitewashed.

#### PLATE No. 3.—Columns B and C in the Indar Tiratham Mandapam. within the fourth court of the Temple.

q. Once a year the god is brought from the Great Vishnu Pagoda at Srirangam and placed in the porch of the Indar Tiratham. The visit is accompanied

with great ceremony, and the priests assemble round the small tank.

The two columns B and C in the building were detailed by my Hindu draftsmen, who alone were permitted to pass beyond the fourth enclosure. Column B resembles those in the Subramanya temple at Chillambram. Column C is an edition of those at the Seven Pagodas, but the building from its position appears to have been added after the fourth enclosure walls were crected

#### PLATE No. 4-Column Aln the Maisur Raja's Mandapam in the fourth court of the Temple.

#### PLATE No. 5.-Column D in the Unjal Mandapam in the fourth court of the Temple. Door H in the gate of the third enclosure.

to. The Maisur Raja's pavilion is a square building supported by 24 columns. The Detail A shows the chaborate design and sculpture of one with its seroils and quaint figure devices. The Unjal Mandapam is a small pavilion at the south-west corner of the fourth court. The Detail D of one of its column looks more modern in style than the rest of the temple architecture. The Gate H leading into the third court has a handsome wooden door studded with iron knobs, which is detailed in Plate No. 5 (XYLIA-DOLA-BERFORMS—The Iron Tree.)

11. The name "Jambulshuar" is derived from Jambu, the name of a tree, and Isvara, a name of the god Siva, but the temple is also known as Tiravanaika, at sacred grove of the elephant, by which name the position of the building is indicated on a map of Trichinopoly, dating A.D. 1668, reproduced in M. Langlo's Monuments Anciens et Modernes de L'Hindoustan (Paris, 1821).

ta The central sametuary, called the Jambunath Swami, contains a stone lingam; the building is of small size, irregular in outline in plan and with a flat roof. The female goddess Lakshmi has a temple to herself in the north part of the lifth enclosure; besides these there are numerous pillared balls and choutries, a tank and pavilion for the special use of the god and goddess, and a tank and Mandapam dedicated to Brahma.

### Appendix X.

#### Great Temple of Ramnach Swami at Rameshwaram.

1. The pageda of Rameshwaram (from two Sanserit which Rame and I hwar) to one of five great places of Hindu pilgrimage in India. Rame, the seventh in armation of Vishin, is said to have worshipped Siva on the sair of the temple, and creeted the lingam now in its sanctuary. Hence follow ra both of Vishin and Siva, a make here in great numbers. A light railway would possibly pay the rry pilgrims from the Madure to the coast, but at present the journey is over 08 unless of bull road to Ramand, the sand being in some places very heavy Mandapam on the coast is 24 miles further, and from thence a host conveys one the channel to Paumben in the Rameshwaram Island. The town of that name is about 2 miles beyond, and at its east end stands the temple buildings, the outer walls of which measure 866 feet along the north, 864 along the south, 654 along the east, and 664 along the west face. I had a very tracely survey

note of the place, and photographs taken of the principal leatures.

The entrance from the Paumben side is by the western Goparam which all of tone, measuring in plan 62 feet long by 40 het wide, and crowned by five storic the total height being about two feet. The building is of comparatively imple cuttine, excepting the upper story which is covered by some florid plants figures and ornaments. It is in disrepair; the passage dirty and neglected: there are two inscriptions in it. Passing through the door one entom a covered some 440 feet long by 60 feet broad, with three rows of columns on either ide. The detail was drawn of one with a rampant Yali or griffin. The centre of the name is crossed by the third or Muna Trakaram, a corridor encircling the temple buildings on all four sides, and constituting its chief, attraction from an architectural point of view. The corridors out the longer side of the rottangle of about 657 feet from end to end. All four flanked by elaborately sculptured pillers in rows from three to two deep produce an effect by the di-play of labour and the length of the vietas, which is unequalled elsewhere in India. Unfortunately the ceiling and columns are covered with plaster and paint, but

the general effect is most impressive.

3. Passing along this great corridor to the right or south, one sees to the control of the transformed by steps measuring it 7 feet, square at the top, and to the west a Sivu Lingain temple measuring in plan 50 feet by 35 feet, which Mr. Fergusson think may dat from the 11th or 12th century A.D. Continuing along the 11th there are some handsome column at the corner, detailed drawings of which have been made; the former 17 feet and the latter as feet in hight. Half was down the length of the corridor of a trusses the approach from the southern Goparam. The latter is an unfinished in 11th plan. If completed this would have been the most impring hailding in the temple. Now it is overgrown with we also and in disrepair, the outer of ming being narrowed to a small wicket. The corridor to the east of the temple pare between the Mutti-Goparam and the Mongala Goparam on the west or left, and the V smith Mandapam and Kali na Mandapam on the cast or right. The Vasanta Mandapam in the figures of a R much Raja and his wive, was drawn to feet his a and, with the figures of a R much Raja and his wive, was drawn to detail. The whole huilding is neglected, columns and collings plantered, in I the ceiungs covered with paint. The 11 in inscription on a black tone data

The adjoining Kaliana Mandapain measures inside 75 leet by 58 feet but is duty and dilapidated the columns and ceiling plastered and colorwashed. Opposite the Kaliana Mandapam is the Mangala Goparam, measuring 35 leet by 23 feet in p an : the superstructure of which is complete. A column in the colonnale in front of the gate was drawn in detail. The Vassata Goparum forms the principal approach to the temple and is connected by a currilor with the Muth Goparam, a gate measuring 91 feet by 51 feet in plan. Its superstructure i incomplete, but is built of some without florid figure sculpture to confuse the structural outline, and, as Mr. Fergusson remarks, it mure nearly reproduces the effect of an Egyptain propylon than any other example of its class in India. The corridor or Prakaram to the north has over 450 pillars and a drawing has been made of one with a figure of a man carrying a woman on his back in rhaps Sita being carried off by Ravani The northern Goparam measures 108 feet by 62 feet, and is built up to a height of only 12 feet. The structure is in disrepair and overgrown with vegetation the outer entrance is narrowed to a small wicket. A detail was drawn of a column in the western corridor, with a statue on it of one of the Rajas of Rammad. The outer wall surrounding the temple buildings is in considerable discenair.

4. The sanctuaries of the god and goddess are separate shrines, each surrounded by a Prakaram. The two are connected by a corridor and again corrounded by a second Prakaram, but to this part of the temple only Hindus are admitted. My Hindu draltamen who were allowed access made a plan and detailed three very handsome wooden doors, they also made a drawing of the monster stone buil or Nandi with its very maily carved trappings and ornaments, which stands under a pillared canopy in front of the Ramnath shrine. It measures 22 feet in length by 17 feet in height, and is nearly half as large again

as the great Nandi in the temple at Tanjore.

5 Mr. Fergusson describes the Rameshwaram temple as belonging to the seventeenth century, except the small Vimana in the west corridor, already described, which he thinks may belong to the eleventh or twelfth century. From the inscriptions furnished to Mr. Sewell,1 it appears that the Mahamandapam, immediately in front of the Ramnath temple, was built in 1598 AD and that the Kotestirtham on the north wall of the temple was built in 1608 A.D. My surveyors noted 27 different inscriptions the positions of which are indicated by numbers on my survey.

6. I had photographs taken of the jewels used for the god and goddess, and from information furnished by the district authorities, from the temple records,

have ascertained the dates when some were presented, i.e.,-

i .- A conical crown for the god of solid gold, studded with pearls and precious stones, presented 1414 A.D.

ii - Crowns for the god and godiless of solid gold, embedded with precions stones, presented by Vlawanatha Nayakkan alout 1557 A.D.

iii .- Pendants of single and double-bearied hirds or Ga udes of gold, embedded with jewels, presented 300 years ugo: these are most curious and resemble Egyptian enamelled amuleta of the time of Rhamses II.

iv.-Armour for the god of solid gold and j-wels, presented about 350 Years ago.

v -A stool of gold presented about 1665 A.D.
